ENGINEERED FOR LIFE

## Our Key to Success and Commitment

People Are the Key to Our Success
Neo-Dyn's founders had more than 200 years cumulative experience in the design and manufacture of pressure switches when they started the company in 1973. Over the years, we have built a substantial work force of skilled professionals in every discipline, from design and testing, to marketing and manufacturing. Many of our people have been with the company since its beginning.

## In-House Capabilities for Total Control

Having total in-house capabilities, we provide our customers with high quality products with rapid delivery and competitive prices.

## Broad Range Capabilities

Although our standard product line is among the broadest in the industry, we are not limited to what is seen in our catalog. Long before we developed our standard product line, we had a reputation for manufacturing the highest quality specialty switches available. If you don't see what you want in our catalog, our application and engineering staff will work with you to provide a switch, ideally suited to your application.

## Total Reliability

In addition to our commercial and industrial products, we supply switches to the military and aerospace industries. What this means to our customers is the highest quality control standards in the industry.

## Commitment to Research and Development

As an industry leader, Neo-Dyn is on the cutting edge of technology, developing new products, manufacturing methods, and materials to meet our customers' present and future needs.

[^0]
# Repeatability, Accuracy and Maintenance for Pressure Switches 

## REPEATABILITY

Repeatability is the maximum set point deviation of a single pressure switch under one given set of environmental and operational conditions. Since adjustable pressure switches can be set at any discrete set point within its given adjustable range this is the most common performance criteria stated by the manufacturer. A general repeatability statement is that a ITT Neo-Dyn pressure switch will repeat within $\pm 0.5 \%$ of its set point when set in the upper $80 \%$ of its adjustable range for set points above 10 psig. Exceptions to this statement could include piston sensor pressure switches and switches whose adjustable range is inches of water.

## ACCURACY

Accuracy is a term generally associated with analog instruments such as transducers and transmitters. Since a pressure switch is meant to give a contact opening or closure at a discrete set point an accuracy statement can only be given if all operational and environmental conditions are clearly defined. For example, what is the accuracy of an Neo-Dyn model 100P12C3 when set at 150 psig increasing pressure when cycled between 150 psig and 130 psig for 500 cycles over a temperature range of +40 to +160 degrees Fahrenheit at a cycle rate of 15 cycles per minute. Again, the model, the operational and environmental conditions must all be defined. ITT Neo-Dyn can provide limited testing on some of its models under various test conditions.

## MAINTENANCE

Under normal circumstances ITT Neo-Dyn pressure switches do not require maintenance or re-calibration. For critical applications or those where the switches are used in a severe environment, it is suggested a calibration check be performed at intervals based upon actual in service stability data.

# Temperature Limitations <br> for Pressure Switches 

Pressure switch applications often have media temperatures that are in excess of our published specifications. Even though most of Neo-Dyn's switches can actually withstand temperatures higher than those listed, they are published for varying reasons that include effects on; set point shift, decreased life expectancy, or in some cases, damage. O-rings themselves have limitations even though they are capable of temperatures higher than those we publish for the switches. Generally speaking, Buna-N and EPR are good up to $250^{\circ} \mathrm{F}\left(121^{\circ} \mathrm{C}\right)$, Viton up to $400{ }^{\circ} \mathrm{F}$ $\left(204^{\circ} \mathrm{C}\right)$. The welded assemblies have no o-rings at all.

The main purpose of this bulletin is to advise the end user that the media temperature limitations of these switches can be overcome by simply increasing the distance of the switch from the source of the media. Since Neo-Dyn's pressure switches are "dead-ended" devices, the temperature at the diaphragm or piston will not be the same as it is at the media. Often a 1 ft . ( 30.46 cm ) length of uninsulated $1 / 4$ inch, SS tubing is enough to lower the temperature to within published specifications. The rule of thumb utilized for these applications is as follows: For every 2 ft. ( 60.96 centimeters) of uninsulated $-1 / 4$ inch-SS tubing, you dissipate $100^{\circ} \mathrm{F}\left(37.77^{\circ} \mathrm{C}\right)$, in excess of $+200^{\circ} \mathrm{F}\left(+93.3^{\circ} \mathrm{C}\right)$. It will of course depend on the initial media temperature, type of media, ambient temperature, and piping size \& material. In some cases a longer capillary may be the best solution. Typically the tubing is coiled, so as to conserve space (pig tail). There are also other methods for dissipating heat, such as condensate chambers or reservoirs filled with liquid, which will act in the same manner as a diaphragm seal in isolating and dissipating the heat. These methods are better explained in ISA, ASME or other such industry and engineering standard practice texts.

Should you have further questions or require additional information, please contact your Regional Sales Manager or the factory directly.

ENGINEERED FOR LIFE

## Conventional Pressure Switch Design

## Constant Rate Spring

A constant rate type pressure switch, i.e., a bellows, diaphragm, bourdon tube and spring loaded piston, are linear devices-for a certain pressure change the pressure element moves a given distance. For additional movement more pressure (force) is applied. The position of the electrical switch, therefore, influences and/or dictates the pressure switch set point.

Disadvantages of the "Constant Rate" Switches
NON-STABLE SET POINTS - "Requires Constant Recalibration" BECAUSE:

- Sensor mechanism follows the system pressure-subject to fatigue.
- Set point influenced by snap acting electrical—variations in snap switch differential affects deadband of pressure switch.
- Ambient temperature sensitive-relocation of electrical switch causes change in set points.
- Linkage used to adjust electrical switch—linkage wear relocates electrical, causing set point change.

## VIBRATION SENSITIVE - "Causes Contact Chatter" <br> BECAUSE:

- Constant rate device "mimics" dynamic input-intermittent electrical signal if vibration occurs when switch is near actuation.
- Larger mass associated with constant rate sensor mechanisms-more mass means less vibration resistance.
- Spring mounted electricals or linkages_resonance frequency can cause spring or linkage to "take off" causing electrical contacts to chatter.

## OVER-PRESSURE SENSITIVE - "Affects Set Point Accuracy"

## BECAUSE:

- Motion transfer device must contain pressure—bellows, bourdon tubes, and welded diaphragms contain pressure as well as actuate the electrical.
- Limited sensor support—sensors with limited overpressure support are subject to set point drift.

## LIMITED CYCLE LIFE - "Dependent on Set Point" BECAUSE:

- Longer stroke-repositioning the electrical for set point changes requires greater movement.
- Shorter electrical life-"sneaking up" on the electrical can cause an electrical arc.

## Neo-Dyn ${ }^{\circledR}$ Pressure Switch Design

## Nega-Rate® Belleville Spring

A negative rate type pressure switch (i.e., a Belleville spring) is a snap acting device. At a certain pressure (apex of the spring curve) the spring snaps over center. At this point, it takes less pressure (force) to continue its movement. The pressure switch set point is a function of the Belleville spring. The electrical switch is in a fixed position and is synchronized to the movement of the Belleville.

DEACTUATED

ACTUATED

## Advantages of the Nega-Rate® Belleville Disc Spring Switches

## STABLE SET POINTS - "Eliminates Constant Recalibration"

## BECAUSE:

- No moving parts except during actuation-no spring fatigue or wear.
- Set point is mostly a function of the negative rate Belleville spring-variables in snap action electrical have little effect on the set point.
- Total movement of the Belleville spring compensates for any relocation of the electrical due to case growth-consistent set point over temperature change.
- No linkage utilized-no wear which can affect accuracy.

## VIBRATION RESISTANT - "Eliminates Contact Chatter"

## BECAUSE:

- Belleville spring does not preload the electrical prior to actuation-snap action electrical maintains its vibration resistant characteristic.
- Small mass and inherent stability of the Belleville spring resists chatter caused by vibration.
- Snap action electrical is ruggedly mounted with minimal bracketry-no spring mounted electricals or linkages.

## HIGH OVER-PRESSURE CAPABILITY - "No Affect on Set Point Accuracy" BECAUSE:

- Belleville spring does not contain the pressure-no affect on system or proof pressure capability.
- The pressure sensing portion bottoms out after actuation and is fully supported-pressure sensing parts are designed for high pressure conditions.
- Limited movement of spring mechanism-no overtravel of the snap action electrical due to high pressure.

## HIGH CYCLE LIFE - "Millions of Cycles" <br> BECAUSE:

- Short stroke minimizes wear-Belleville spring mechanism is exercised less than .020".
- Snap action of Belleville spring reduces electrical arc—prolongs contact life.

# Neo-Dyn ${ }^{\circledR}$ Pressure, Flow $\varepsilon$ Temperature Switch Definitions $\varepsilon$ Terminology 

## Introduction

The following definitions and terminology describe the operating characteristics, specifications and other details relative to pressure, flow, and temperature switches.

## Types of Switches

ABSOLUTE PRESSURE SWITCH: A switch that compares the pressure being sensed to that of a perfect vacuum. Construction requires the reference chamber to be evacuated.

DIFFERENTIAL PRESSURE SWITCH: A switch having both a high and low pressure port. Actuation occurs when pressure to the high port exceeds pressure to the low port by a predetermined value.
FLOW SWITCH: A Neo-Dyn ${ }^{\circledR}$ flow switch senses differential pressure generated by flow through a venturi to actuate an electrical switch at a predetermined flow level.

## Definitions

Absolute Pressure - The difference between zero pressure (which exists only in a perfect vacuum) and some known pressure. Absolute pressure may be determined by adding gauge pressure to atmospheric pressure ( 14.7 psi at sea level).

Actuation Point - The point at which electrical switching element is operated on increasing or decreasing pressure. Neo-Dyn considers this point the increasing set point.
Ambient Pressure (or Temperature) - Pressure (or temp-erature) immediately surrounding the switch.

Atmospheric Pressure - The pressure caused by the weight of air. Atmospheric pressure at sea level is considered to be 14.7 psia (or 29.9 inches of mercury or 407 inches of water absolute.)

Burst Pressure - Burst pressure is the maximum pressure which may be applied to a switch without causing leakage. Permanent degradation may occur or the unit may become Inoperable if burst pressure is applied. Burst pressure is normally $2 Z \mid x$ to 3 times maximum system pressure.
Charge Media - The fluid or gas with which the temperature sensing probe is filled.

Critical Set Point - The critical set point is the most important set point of the unit and is held to the closest tolerance. It can be either the actuation (increasing) or deactuation (decreasing) set point.

Deactuation Point - The point at which the electrical switching element is operated on increasing or decreasing pressure. Neo-Dyn considers this point the decreasing set point.

We hope this data provides the answers to questions which may arise and helps you in selecting a switch.

GAUGE PRESSURE (AND VACUUM) SWITCH: A switch that compares the pressure being sensed to that of atmospheric pressure. Positive pressure switches sense monitored pressure above atmospheric pressure while vacuum switches sense pressure below atmospheric.
TEMPERATURE SWITCH: A Neo-Dyn ${ }^{\oplus}$ temperature switch is identical to a pressure switch with the addition of a fluid-vapor charged sensing probe. The fluid-vapor charge is exposed to the "basic sensor" and since probe pressure varies with temperature, discrete temperature settings can be accomplished.

Deadband - The deadband, sometimes referred to as "differential" value, is the change in value between actuation and deactuation set points.
Differential Pressure - The difference between the two pressures being measured.

Direct Mount - A phrase used to refer to the mounting of an instrument directly at the source of the process variable (pressure or temperature) being sensed.

Electrical Form - Industry standards have established letter designations for the various electrical arrangements. They are ' C ' for SPDT, 'CC' for DPDT and 'Z' for double break.

Form ' $C^{\prime}$ ': Single Pole Double Throw (SPDT) Switching Element - An SPDT switching element has one normally closed, one normally open, and one common terminal. Three terminals mean that the element can be wired with the circuit either normally open (N/O) or normally closed (N/C).
Form 'CC': Double Pole Double Throw (DPDT) Switching Element A DPDT switching element has six electrical terminals, two normally closed, two normally open and two common. Neo-Dyn uses two independent SPDT switching elements. Some units are designed for simultaneous operation whereas, others are for separate operation at different set points.

Form 'Z': Double Break Switching Element - A double break switching has two isolated circuits. Four terminals facilitate wiring one circuit normally open and the other normally closed.

## Neo-Dyn ${ }^{\circledR}$ Pressure, Flow \& Temperature Switch Definitions $\&$ Terminology

Electrical Switching Element - The electrical switching element opens or closes an electrical circuit in response to movement by the pressure/temperature sensor. Most Neo-Dyn ${ }^{\circledR}$ products are available in SPST, SPDT and DPDT.

Enclosure (Housing) - That part of the instrument which, in varying degrees, protects the mechanism from ambient conditions.

Explosion Proof - An enclosure which is capable of withstanding an explosion which may occur within, and capable of preventing the ignition of an explosive atmosphere which may surround it.

Gauge Pressure - Gauge pressure is the difference between atmospheric pressure and a variable pressure.

Hermetically Sealed - An enclosure completely sealed from the environment. Neo-Dyn ${ }^{\circledR}$ hermetically sealed electrical assemblies are all metal with a glass header. All joints are soldered or welded to insure sealing integrity.

Mass Rate of Flow - An expression of flow by weight in a given time, such as pounds per hour (PPH).

Media - The liquid or gas being sensed by the instrument.
NEMA Classifications
Ref: NEMA Standards Publication, Pub. No. ICS6-1988
NEMA Type 1 - General Purpose - Indoor
Type 2 - Dripproof-Indoor
Type 3 - Dusttight, Raintight and Sleet (Ice) Resistant - Outdoor
Type 3R - Rainproof and Sleet (Ice) Resistant

- Outdoor

Type 3S - Dusttight, Raintight and Sleet (Ice)
Proof - Outdoor
Type 4 - Watertight and Dusttight - Indoor and Outdoor
Type 4X - Watertight, Dusttight and Corrosion Resistant - Indoor and Outdoor
Type 5 - Superseded by Type 12 for Control Apparatus
Type 6 - Submersible, Watertight, Dusttight and Sleet Resistant - Indoor and Outdoor
Type 7 - Class I, Group A, B, C or D Hazardous Locations; Airbreak Equipment - Indoor
Type 8 - Class I, Group A, B, C or D Hazardous Locations; Oil-Immersed Equipment

- Indoor

Type 9 - Class II, Group E, F or G Hazardous Locations; Airbreak Equipment - Indoor
Type 10 - Bureau of Mines
Type 11 - Corrosion Resistant and Dripproof; Oil-Immersed - Indoor
Type 12 - Industrial Use, Dusttight and Driptight - Indoor

Type 13 - Oiltight and Dusttight - Indoor

Non-Critical Set Point - The non-critical set point is the least important setting and the tolerances are not held as close as the critical set point. It can be either the actuation or deactuation point.

Polyimide - An engineering thermoplastic polymer characterized by high tensile strength, excellent wear resistance, chemical and radiation inertness, and good dielectric properties over a wide temperature range. Neo-Dyn ${ }^{\oplus}$ uses DuPont Kapton ${ }^{\circledR}$ Type F teflon coated flexible polyimide film as a diaphragm material.

Note: Although excellent for most applications, polyimide is subject to cracking after prolonged exposure to water above $140^{\circ} \mathrm{F}$.

Pressure - Force per unit of area.
Pressure Sensing Element - The pressure sensing element is that component part which moves as pressure increases or decreases, operating an electrical switching element at a predetermined point. Neo-Dyn "Nega-Rate" pressure switches utilize a diaphragm or piston as a media seal with a Belleville negative-rate disc spring system.

Pressure Switch - A pressure switch is an instrument designed to convert pressure into motion to operate an electrical switching element-thereby making or breaking an electrical circuit.
Proof Pressure (or Temperature) - Normally 1ZXx to 2 times system, it is the maximum momentary pressure (or temperature) including surges, which may be applied to any switch without causing permanent degradation.

Remote Mount - A phrase used to refer to the mounting of an instrument away from the source of the process variable being sensed (usually via a capillary tube).

Repeatability - Repeatability is the maximum set point deviation of a single pressure switch under one given set of environmental and operational conditions.

Special Switch - A unit which is modified outside the limits of a standard catalog item.

System (Working) Pressure - System pressure is the operating pressure of any hydraulic or pneumatic system.

Tolerance - Tolerance is the maximum allowable setting deviation between two or more production units under all specified environmental and operational conditions. Tolerance represents the sum total of setting deviations due to calibration and manufacturing variations, temperature changes, etc.

Variable Pressure - Changing pressure, generally the pressure which is being measured or controlled.

Volume Rate of Flow - An expression of flow by volume in a given time, such as gallons per minute (GPM).
Wetted Materials - That portion of the unit which comes in contact with the pressure media.

## Media Compatibility Information

The following is a chart of common media with recommended O-Ring compounds that can be used with the Polyimide and Elastomer diaphragms used in Neo-Dyn ${ }^{\oplus}$ pressure switches except as noted.

NOTE: The information given on this chart is typical performance data for "Kapton" Type H and Type F films; it is not intended to be
used as design data. We believe this Information is the best currently available on the subject. It is offered as a possible helpful suggestion in experimentation you may care to undertake along these lines. It is subject to revision as additional knowledge and experience are gained. Neo-Dyn ${ }^{\circledR}$ makes no guarantee of results and assumes no obligation or liability whatsoever in connection with this information.

## Temperature Limitations

for Pressure Switches

Pressure switch applications often have media temperatures that are in excess of our published specifications. Even though most of Neo-Dyn's switches can actually withstand temperatures higher than those listed, they are published for varying reasons that include effects on; set point shift, decreased life expectancy, or in some cases, damage. O-rings themselves have limitations even though they are capable of temperatures higher than those we publish for the switches. Generally speaking, Buna-N and EPR are good up to $250^{\circ} \mathrm{F}\left(121^{\circ} \mathrm{C}\right)$, Viton up to $400^{\circ} \mathrm{F}\left(204^{\circ} \mathrm{C}\right)$. The welded assemblies have no o-rings at all.

The main purpose of this bulletin is to advise the end user that the media temperature limitations of these switches can be overcome by simply increasing the distance of the switch from the source of the media. Since
Neo-Dyn's pressure switches are "dead-ended" devices, the temperature at the diaphragm or piston will not be the same as it is at the media. Often a $1 \mathrm{ft} .(30.46 \mathrm{~cm})$ length of uninsulated $1 / 4$ inch, SS tubing is enough to lower the temperature to within published specifications. The rule of thumb utilized for these applications is as follows:

For every 2 ft . ( 60.96 centimeters) of uninsulated- $1 / 4$ inch-SS tubing, you dissipate $100^{\circ} \mathrm{F}\left(37.77^{\circ} \mathrm{C}\right)$, in excess of $+200^{\circ} \mathrm{F}\left(+93.3^{\circ} \mathrm{C}\right)$.

It will of course depend on the initial media temperature, type of media, ambient temperature, and piping size \& material. In some cases a longer capillary may be the best solution. Typically the tubing is coiled, so as to conserve space (pig tail). There are also other methods for dissipating heat, such as condensate chambers or reservoirs filled with liquid, which will act in the same manner as a diaphragm seal in isolating and dissipating the heat. These methods are better explained in ISA, ASME or other such industry and engineering standard practice texts.

Should you have further questions or require additional information, please contact your Regional Sales Manager or the factory directly.

# Repeatability, Accuracy and Maintenance 

for Pressure Switches

#### Abstract

REPEATABILITY Repeatability is the maximum set point deviation of a single pressure switch under one given set of environmental and operational conditions. Since adjustable pressure switches can be set at any discrete set point within its given adjustable range this is the most common performance criteria stated by the manufacturer. A general repeatability statement is that a ITT Neo-Dyn pressure switch will repeat within $\pm 0.5 \%$ of its set point when set in the upper $80 \%$ of its adjustable range for set points above 10 psig. Exceptions to this statement could include piston sensor pressure switches and switches whose adjustable range is inches of water.

## ACCURACY

Accuracy is a term generally associated with analog instruments such as transducers and transmitters. Since a pressure switch is meant to give a contact opening or closure at a discrete set point an accuracy statement can only be given if all operational and environmental conditions are clearly defined. For example, what is the accuracy of an Neo-Dyn model 100P12C3 when set at 150 psig increasing pressure when cycled between 150 psig and 130 psig for 500 cycles over a temperature range of +40 to +160 degrees Fahrenheit at a cycle rate of 15 cycles per minute. Again, the model, the operational and environmental conditions must all be defined. ITT Neo-Dyn can provide limited testing on some of its models under various test conditions.

## MAINTENANCE

Under normal circumstances ITT Neo-Dyn pressure switches do not require maintenance or recalibration. For critical applications or those where the switches are used in a severe environment, it is suggested a calibration check be performed at intervals based upon actual in service stability data.

[^3]
## Switch Selection Questions

1Does the Switch Have to Be adjustable?
Tamper-proof, tamper-resistant, fixed or adjustable

## Critical Set Point?

3 Tells us the range required Tells us if the set point is increasing or decreasing and if the deadband of the switch is important

4What is the Process Being Sensed?
Confirms the wetted materials

## 5 What is the Function of the Switch? <br> Will confirm SPDT or DPDT

CC $11 \mathrm{amp}, 1 / 4 \mathrm{hp}$ at 125 or $250 \mathrm{VAC} ; 5 \mathrm{amp}$ resistive, 3 amp inductive at 28 VDC; .5 amp resistive at 125 VDC
Z 15 amp at 125 or 250 VAC; $1 / 4 \mathrm{hp}$ at $125 \mathrm{VAC} ; 1 / 2 \mathrm{hp}$ at $250 \mathrm{VAC} ; 1 \mathrm{amp}$ resistive, .5 amp inductive at 125 VDC

## Enclosure

3 Meets or exceeds the requirements of NEMA Type 3, 3R, 3S, 4, 4X and 13

## Miscellaneous

A Epoxy paint exterior - extra protection for severe environments
B Viton O-Ring
C EPR O-Ring
D SIL approval and marking, per IEC61508 (includes FMEA report)
E 7/16"- 20 SAE port (Wetted Material 1 Only)
F Fire fuse - for fire-tested equipment (Wetted Material 4 \& 5 only)
J Annealed stainless steel port screws for H2S environments (Wetted Materials 4 and 5 only) - Consult factory for reduced system and proof pressure

L Neon indicator light - 115 VAC
M Gold electrical contacts for extremely low current applications
P 5-Pin Brad Harrison connector (Reduce AC electrical rating to 8 amps - (Not for CC3 Electrical)
S Stainless steel diaphragm (Wetted Material 4 only)
W Stainless steel screws - exterior (Standard with Wetted Materials 4, 5, 7 and 9)
X UL and CSA Approved and CE Mark (Not available with L or P option)
$\mathbf{Y} \quad 2 "$ NPT Female port for viscous medias. Port Material is carbon steel (Wetted Material " 3 ") - Order as 100P3xxxxY

Special (Consult representative or factory)

- Non-catalog adjustable range and/or set point, deadband and proof pressure
- Media temperature capability from $-65^{\circ} \mathrm{F}$ to $+400^{\circ} \mathrm{F}$
- Chemical seals installed
- Manual reset - decreasing only (available in C3 only)
- 10 amps 125 VDC electrical rating

## Ordering Procedure

When factory presetting is desired, stipulate set point, increasing or decreasing

- Insert available option number or letter designation as required

## Ordering Sequence - Select desired option for each category

## OPTIONS

## Wetted Material

1 Aluminum port, Teflon coated polyimide diaphragm and Buna-N O-Ring
4316 stainless steel port, Teflon coated polyimide diaphragm and Buna-N O-Ring
5316 stainless steel port and diaphragm heliarc welded
7 Hastelloy C port and diaphragm, heliarc welded (Except Range 1)
9 Monel port and inconel diaphragm heliarc welded (Except Range 1)

## Adjustable Range

12.3 psig dec. to 75 psig inc. (0.2 bar dec. to 5.2 bar inc.) 29 psig dec. to 150 psig inc. ( 0.6 bar dec. to 10.3 bar inc.) $4 \quad 36 \mathrm{psig} \mathrm{dec}$. to 300 psig inc. (2.5 bar dec. to 20.7 bar inc.) 5100 psig dec. to 600 psig inc. ( 6.9 bar dec. to 41.4 bar inc.) 7440 psig dec. to 1500 psig inc. (30.3 bar dec. to 103.4 bar inc.) 8675 psig dec. to 2800 psig inc. (46.5 bar dec. to 193.1 bar inc.)

## Electrical Form

C 15 amp at 125 or 250 VAC; 1/8, hp at 125 VAC; $1 / 4$ hp at 250 VAC; . 5 amp resistive, .04 amp inductive at 125 VDC
Z 15 amp at 125 or 250 VAC; $1 / 4$ hp at 125 VAC; $1 / 2 \mathrm{hp}$ at 250 VAC; 1 amp resistive, .5 amp inductive at 125 VDC

## Enclosure

3 Meets or exceeds the requirements of NEMA Type 3, 3R, 3S, 4, 4X and 13

## Miscellaneous

A Epoxy paint exterior - extra protection for severe environments
B Viton O-Ring
C EPR O-Ring
D SIL approval and marking, per IEC61508 (includes FMEA report)
E 7/16"-20 SAE port (Wetted Material 1 only)
K External adjustment knob
L Neon indicator light - 115 VAC
M Gold electrical contacts for extremely low current applications
P 5-Pin Brad Harrison connector (Reduce AC electrical rating to 8 amps ) - (Not for CC3 Electrical)
S Stainless steel diaphragm (Wetted Material 4 only)
X CSA Approved and CE Mark (Not available with L or P option) (Wetted Material 4 only; Not available with Range 1)
Y 2" NPT Female port for viscous medias. Port Material is carbon steel (Wetted Material "3") - Order as 101P3xxxxY

Special (Consult representative or factory)

- Non-catalog adjustable range and/or set point
- Operating temperature capability from $-65^{\circ} \mathrm{F}$ to $+400^{\circ} \mathrm{F}$
- Wide deadband
- 10 amps 125 VDC electrical rating

## Ordering Procedure

When factory presetting is desired, stipulate set point, increasing or decreasing
Weather Proof
(NEMA 4 and 13)

- Insert available option number or letter designation as required

Envelope Dimensions

## Neo-Dyn ${ }^{\circledR}$ Series 142P8

Ultra Low Vacuum/Pressure Switch
Ultra low pressure and vacuum to pressure crossover switch. Unique construction using efficient Nega-Rate ${ }^{\circledR}$ Belleville disc spring for stable set points and high proof pressure. Wide range of wetted materials makes this series well suited for applications that formerly required the use of diaphragm seals.

## Operating Pressure Data

| Adjustable Range Number | Adjustable Set Point Range | Deadband* (approximate) | Maximum Recommended System Pressure | Proof Pressure |
| :---: | :---: | :---: | :---: | :---: |
|  | Increasing |  |  |  |
| 0 | 1" to $10^{\prime \prime} \mathrm{H}_{2} \mathrm{O}$ | .75" $\mathrm{H}_{2} \mathrm{O}$ | 30" $\mathrm{H}_{2} \mathrm{O}$ Vacuum to $30 \mathrm{H} \mathrm{H}_{2} \mathrm{O}$ Pressure | $30 \mathrm{H} \mathrm{H}_{2} \mathrm{O}$ Vacuum to +5 psig |
| 1 | 2" to 40" $\mathrm{H}_{2} \mathrm{O}$ | 1" $\mathrm{H}_{2} \mathrm{O}$ | 30" $\mathrm{H}_{2} \mathrm{O}$ Vacuum to $+5 \mathrm{psig}$ | $30 " \mathrm{H}_{2} \mathrm{O}$ Vacuum to +15 psig |
| 2 | 0" to 40" $\mathrm{H}_{2} \mathrm{O}$ Vacuum to $0 "$ to $40 " \mathrm{H}_{2} \mathrm{O}$ Pressure | 1" $\mathrm{H}_{2} \mathrm{O}$ | Full Vacuum to +15 psig | Full Vacuum to 100 psig |

*Deadband 50\% wider with "CC" (DPDT) and "Z" (Double Break) Electrical Forms.

| 6 | 7000 to 10000 | 6000 to 9000 | 1000 | 12500 | 15000 |

All values given in psig.

## Standard Specifications

## Electrical

Snap action electrical switch listed by Underwriters' Laboratories, Inc. and CSA International

## Electrical Connection

1/2 NPT male conduit connection with PVC insulated 18 AWG,
18" long leads
Pressure Connection
1/4 NPT Female
Temperature Range*
Ambient:
$-40^{\circ} \mathrm{F}$ to $+180^{\circ} \mathrm{F}$
$\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+82^{\circ} \mathrm{C}\right)$
Media: $\quad-40^{\circ} \mathrm{F}$ to $+250^{\circ} \mathrm{F}$
$\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+121^{\circ} \mathrm{C}\right)$

* Temperature limits change with O-Ring selection

## Adjustment

Internal, slotted adjustment nut with range scale

## Shipping Weight

Approximately 20 ounces

Order Miscellaneous
Option "D"

$\qquad$

## Ordering Sequence - Select desired option for each category

## OPTIONS

## Wetted Material

4316 stainless steel port and piston, Buna-N O-Ring

## Adjustable Range

## Electrical Form

C $11 \mathrm{amp}, 1 / 4 \mathrm{hp}$ at 125 or 250 VAC; 5 amp resistive, 3 amp inductive at 28 VDC;
.5 amp resistive at 125 VDC
CC $11 \mathrm{amp}, 1 / 4 \mathrm{hp}$ at 125 or 250 VAC ; 5 amp resistive, 3 amp inductive at 28 VDC ; .5 amp resistive at 125 VDC

## Enclosure

3 Meets or exceeds the requirements of NEMA Type 3, 3R, 3S, 4, 4X and 13

## Miscellaneous

A Epoxy paint exterior - extra protection for severe environments
B Viton O-Ring
C EPR O-Ring
D SIL approval and marking, per IEC61508 (includes FMEA report)
E 7/16"-20 SAE Port
G $\quad 1 / 2$ NPT Female Port
I 3/4 NPT conduit box with terminal strip
J Annealed stainless steel port screws for $\mathrm{H}_{2} \mathrm{~S}$ environments - Consult factory (Not available with range $4,5 \& 6$ )
M Gold electrical contacts for extremely low current applications ( 1 Amp at 125 VAC ; 1 Amp Res, 0.5 Amp Ind. at 28 VDC )
R 72" Electrical free leads
X CE Mark
Special (Consult representative or factory)

- Non-catalog adjustable range and/or set point, deadband and proof pressure

## Ordering Procedure

When factory presetting is desired, stipulate set point, increasing or decreasing

- Insert available option number or letter designation as required

## Neo-Dyn ${ }^{\circledR}$ Series 131P Pressure Switch/Internal Adjustment

Compact, adjustable pressure switch for pneumatic or low impulse hydraulic process applications. Using our efficient Nega-Rate ${ }^{\circledR}$ Belleville disc spring, we offer superior set point stability and vibration resistance. The 131P series pressure switch also has a selectable deadband feature which can be preset to fit most any application.

| Operating Pressure Data |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Adjustable | Adjustable Set Point Range |  | Selectable Deadband at a Specified Set Point | Default Deadband (approx.) | Maximum Recommended System Pressure | Proof Pressure |
| Number | Increasing | Decreasing |  |  |  |  |
| 2 | * | 1 to 24 | 1.5 to 2 | 1.9 | 1000 | 2000 |
| 3 | * | 17 to 42 | 3 to 6 | 4.5 | 1000 | 2000 |
| 4 | * | 1 to 50 | 6 to 11 | 8 | 1000 | 2000 |
| 5 | * | 45 to 100 | 7 to 11 | 8 | 1000 | 2000 |
| 6 | * | 90 to 150 | 7 to 17 | 12 | 1000 | 2000 |
| 7 | * | 140 to 200 | 11 to 21 | 16 | 1000 | 2000 |

All values given in psig unless otherwise noted.

* Add selected deadband to decreasing pressure range.

*Temperature limits change with O-Ring selection

## Shipping Weight

Approximately 10 ounces

Order Miscellaneous
Option "D"

## Ordering Sequence - Select desired option for each category

## OPTIONS

Set Points
125P between 20 psig dec. and 3050 psig inc. (1.4 bar dec. and 210 bar inc.)

## Wetted Material

1 Aluminum port, Teflon coated polyimide diaphragm and Buna-N O-Ring
4316 Stainless steel port, Teflon coated polyimide diaphragm and Buna-N O-Ring

## Electrical Form

C $11 \mathrm{amp}, 1 / 4 \mathrm{hp}$ at 125 or 250 VAC; 5 amp resistive, 3 amp inductive at 28 VDC ;
5 amp resistive at 125 VDC
CC $11 \mathrm{amp}, 1 / 4 \mathrm{hp}$ at 125 or 250 VAC ; 5 amp resistive, 3 amp inductive at 28 VDC ; 5 amp resistive at 125 VDC

## Enclosure

3 Meets or exceeds the requirements of NEMA Type 3, 3R, 3S, 4, 4X and 13
Miscellaneous
A Epoxy paint exterior - extra protection for severe environments
B Viton O-Ring
C EPR O-Ring
D SIL approval and marking, per IEC61508 (includes FMEA report)
M Gold electrical contacts for extremely low current applications
R 72" Electrical free leads
W Stainless steel screws - exterior
X CSA approved and CE Mark
Special (Consult representative or factory)

- Pressure port per SAE AS4355E04
- Non-catalog set point, deadband and/or proof pressure
- Media temperature capability from $-65^{\circ} \mathrm{F}$ to $+350^{\circ} \mathrm{F}$

## Ordering Procedure

Specify set point, increasing or decreasing

- Specify deadband if pertinent
- Specify media
- Insert available option number or letter as required

## Pressure Switch/Tamper Proof

A sealed piston sensor with a efficient Nega-Rate ${ }^{\circledR}$ Belleville disc spring makes this switch well suited for high impulse hydraulic applications.

| Operating Pressure Data |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Fixed Set Point Range |  | Deadband (minimums) | Maximum Recommended System Pressure |  | Proof Pressure |  |
| Series | Increasing | Decreasing |  | Hydraulic | Pneumatic | Hydraulic | Pneumatic |
| 225P | 45 to 450 | 15 to 405 | 30 or 10\% | 5000 | 3000 | 7500 | 7500 |
| 225P | 450 to 3000 | 250 to 2700 | 160 or 10\% | 5000 | 3000 | 7500 | 7500 |
| 225PP | 3001 to 7500 | 2701 to 6750 | 10\% | 10,000* | 5000 | 15,000** | 7500 |

All values given in psig.
*Diminished safety factor equal to approximately 2:1
**Diminished safety factor equal to approximately 1.3:1

## Standard Specifications

## Deadband (Differential)

The deadband can be selected anywhere from the minimum tabulated to a maximum of $45 \%$ of the set point

## Electrical

Snap action electrical switch
recognized by Underwriters' Laboratories, Inc. and CSA International
Electrical Connection
1/2 NPT male conduit connection with PVC insulated 18 AWG, 18" long leads

Pressure Connection
1/4 NPT Female
Temperature Range*
Ambient: $-40^{\circ} \mathrm{F}$ to $+180^{\circ} \mathrm{F}$
$\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+82^{\circ} \mathrm{C}\right)$

CC $11 \mathrm{amp}, 1 / 4 \mathrm{hp}$ at 125 or $250 \mathrm{VAC} ; 5 \mathrm{amp}$ resistive, 3 amp inductive at 28 VDC ; .5 amp resistive at 125 VDC

## Enclosure

6 Includes an explosion proof, hermetically-sealed electrical assembly. EX d IIC.
Division 1 and 2, Class I, Groups A, B, C, and D; Class II, Groups E, F, and G NEMA 4X, 7, and 9; IP66. Leads are factory sealed and Pressure Switches are Dual Seal Certified.

## Miscellaneous

D SIL approval and marking, per IEC61508 (includes FMEA report)
I $3 / 4$ NPT conduit box with terminal strip (Groups C \& D only, not available with N option)
M Gold electrical contacts for extremely low current applications
( 1 Amp at $125 \mathrm{VAC} ; 1 \mathrm{Amp}$ Res, 0.5 Amp Ind. at 28 VDC )
N ATEX and IECEx with CE Mark
R 72" Electrical free leads
T 6300 psig system, 9450 psig proof, 410 stainless steel screws (Range 5, 6, 7, 8 \& 9 only)

## Port Material

## 4316 Stainless Steel

5316 Stainless Steel - welded diaphragm (add 40)
7 Hastelloy C — welded Hastelloy diaphragm (add 70)

## Diaphragm

1 Polyimide
$4 \quad 316$ Stainless Steel
6 Tantalum
Internal O-Rings
0 Welded (Port Material 5, 7 \& 9 only) 5 EPR
2 Kalrez 8 Buna-N
3 Viton
Special (Consult representative or factory)

- Non-catalog adjustable range and/or set point and deadband

## Ordering Procedure

- When factory presetting is desired, stipulate set point, increasing or decreasing
- Insert available option number or letter designation as required

## Neo-Dyn ${ }^{\circledR}$ Series 123P Pressure Switch/Internal Adjustment

Compact, adjustable pressure switch for low to mid-range process applications. Efficient Nega-Rate ${ }^{\circledR}$ Belleville disc spring for set point stability and vibration resistance. 316 stainless steel exterior and interior plus hermetically sealed, explosion-proof electrical for atmospheric protection. The flush mount (welded diaphragm) process connection makes this switch ideal for viscous process applications.

| Operating Pressure Data |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Adjustable Range Number | Adjustable Set Point Range |  | Deadband (approximate) | Maximum Recommended System Pressure | Proof Pressure |
|  | Increasing | Decreasing |  |  |  |
| 2 | 3 to 30 | 1 to 28 | 2 | 1350 | 2000 |
| 4 | 20 to 80 | 15 to 75 | 5 | 1350 | 2000 |
| 5 | 50 to 250 | 30 to 230 | 20 | 3000 | 5000 |
| 6 | 200 to 400 | 175 to 375 | 25 | 3000 | 5000 |
| 7 | 375 to 725 | 330 to 680 | 45 | 3000 | 5000 |
| 8 | 700 to 1500 | 620 to 1420 | 80 | 3000 | 5000 |
| 9 | 1500 to 2300 | 1400 to 2200 | 100 | 3000 | 5000 |

All values given in psig.

## Standard Specifications

## Electrical

Snap action electrical switch assemblies, Part Numbers 057-0770 \& 057-0772 (Form C) and 057-0771 \& 057-0773 (Form CC), are listed by Underwriters' Laboratories, Inc., FM Approvals, CSA International and NCC (INMETRO). See the miscellaneous option N for additional listings.

## Electrical Connection

1/2 NPT male conduit connection with PVC insulated 18 AWG, 18" long leads

## Pressure Connection

1 1/2 NPT Male

## Neo-Dyn ${ }^{*}$ Series 130P

## Pressure Switch/Tamper Resistant

Compact, versatile pressure switch well suited for hazardous or corrosive atmospheres. For low to mid-range pressure applications. Features efficient Nega-Rate ${ }^{\circledR}$ Belleville disc spring for superior set point stability and is field adjustable using 1/8" allen wrench through the port. Once adjustments are made and the switch is installed, it becomes tamper proof.

Neo-Dyn ${ }^{\circledR}$ Series $131 \mathrm{P} \quad$ Pressure Switch/Internal Adjustment
Compact, adjustable pressure switch for pneumatic and low impulse hydraulic process applications. Using our efficient Nega-Rate ${ }^{\circledR}$ Belleville disc spring, we offer superior set point stability and vibration resistance. The 131P series pressure switch also has a selectable deadband feature which can be preset to fit most any application.

| Operating Pressure Data |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Adjustable Range Number | Adjustable Set Point Range |  | Selectable Deadband at a Specified Set Point | Default Deadband (approx.) | Maximum Recommended System Pressure | Proof Pressure |
|  | Increasing | Decreasing |  |  |  |  |
| 2 | * | 1 to 24 | 1 to 1.5 | 1.4 | 1000 | 2000 |

## Neo-Dyn Series 180P

## Vacuum Pressure Switch/Internal Adjustment

Adjustable vacuum switch with efficient Nega-Rate ${ }^{\circledR}$ Belleville disc spring sensing mechanism. Weather proof enclosure and stable set points makes this switch ideal for a wide variety of applications.

| Operating Pressure Data |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Adjustable Range | Adjustable Set Point Range |  | Deadband (approximate) | Maximum Recommended System Pressure | Proof Pressure |
| Number | Increasing Vacuum | Decreasing Vacuum |  |  |  |
| 4 | $3^{\prime \prime}$ to $28{ }^{\prime \prime} \mathrm{Hg}$ | 1" to 26 " Hg | 2" Hg | 225 | 350 |

[^5]
## Standard Specifications

## Electrical

Snap action electrical switch recognized by Underwriters' Laboratories, Inc. and CSA International

## Electrical Connection

$1 / 2$ NPT female conduit connection with terminal block

## Pressure Connection

1/4 NPT Female
Temperature Range*
Ambient: $-40^{\circ} \mathrm{F}$ to $+180^{\circ} \mathrm{F}$
$\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+82^{\circ} \mathrm{C}\right)$
Media: $\quad-40^{\circ} \mathrm{F}$ to $+250^{\circ} \mathrm{F}$
$\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+121^{\circ} \mathrm{C}\right)$
*Temperature limits change with
O-Ring selection

## Adjustment

Concealed wrench flat adjustment
with range scale
Shipping Weight
Approximately 3.5 pounds

## Ordering Sequence - Select desired option for each category

## OPTIONS

## Wetted Material

1 Aluminum port and body, Teflon coated polyimide diaphragm, Buna-N O-Rings
and stainless steel
4 Stainless steel, Teflon coated polyimide diaphragm and Buna-N O-Rings

## Adjustable Vacuum Range

$41^{1 " ~} \mathrm{Hg}$ dec. to 28 Hg Hg . ( 0.0 bar dec. to 0.9 bar inc.)

## Electrical Form

C 15 amp at 125 or $250 \mathrm{VAC} ; 1 / 8 \mathrm{hp}$ at $125 \mathrm{VAC} ; 1 / 4 \mathrm{hp}$ at 250 VAC ;
.5 amp resistive, .04 amp inductive at 125 VDC
CC $11 \mathrm{amp}, 1 / 4 \mathrm{hp}$ at 125 or 250 VAC ; 5 amp resistive, 3 amp inductive at 28 VDC ; .5 amp resistive at 125 VDC

## Enclosure

3 Meets or exceeds the requirements of NEMA Type 3, 3R, 3S, 4, 4X and 13

## Miscellaneous

A Epoxy paint exterior - extra protection for severe environments
B Viton O-Ring
C EPR O-Ring
D SIL approval and marking, per IEC61508 (includes FMEA report)
L Neon indicator light - 115 VAC
M Gold electrical contacts for extremely low current applications
X CE Mark
Special (Consult representative or factory)

- Non-catalog adjustable range and/or set point, deadband and proof pressure
- Media temperature capability from $-65^{\circ} \mathrm{F}$ to $+350^{\circ} \mathrm{F}$
- 10 amps 125 VDC electrical rating
- Chemical seals installed
- Optional orientation of Low Pressure Port

## Ordering Procedure

- When factory presetting is desired, stipulate set point, increasing or decreasing
- Insert available option number or letter designation as required

All values given in psid.

## Standard Specifications

## Electrical

Snap action electrical switch recognized by Underwriters' Laboratories, Inc. and CSA International

Electrical Connection
1/2 NPT female conduit connection with terminal block
Pressure Connections
1/4 NPT Female
Temperature Range*
Ambient: $-40^{\circ} \mathrm{F}$ to $+180^{\circ} \mathrm{F}$
$\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+82^{\circ} \mathrm{C}\right)$
Media: $\quad-40^{\circ} \mathrm{F}$ to $+250^{\circ} \mathrm{F}$
$\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+121^{\circ} \mathrm{C}\right)$
*Temperature limits change with O-Ring selection

## Adjustment

Concealed wrench flat adjustment with range scale

## Shipping Weight

Approximately 3.5 pounds

Order Miscellaneous
Option "D"

Weather Proof (NEMA 4 and 13)

## Ordering Sequence - Select desired option for each category

## OPTIONS

## Wetted Material

1 Aluminum port and body, Teflon coated polyimide diaphragm, Buna-N O-Rings and stainless steel
4 Stainless steel, Teflon coated polyimide diaphragm and Buna-N O-Rings

## Adjustable Range

2.75 psid dec. to 15 psid inc. ( 0.1 bar dec. to 1.0 bar inc.) $4 \quad .3$ psid dec. to 18 psid inc.
$6 \quad 2$ psid dec. to 60 psid inc.
$7 \quad 49$ psid dec. to 110 psid inc

## Electrical Form

C 15 amp at 125 or $250 \mathrm{VAC} ; 1 / 8 \mathrm{hp}$ at $125 \mathrm{VAC} ; 1 / 4 \mathrm{hp}$ at 250 VAC ;
.5 amp resistive, .04 amp inductive at 125 VDC
CC $11 \mathrm{amp}, 1 / 4 \mathrm{hp}$ at 125 or $250 \mathrm{VAC} ; 5 \mathrm{amp}$ resistive, 3 amp inductive 28 at VDC; .5 amp resistive at 125 VDC

## Enclosure

3 Meets or exceeds the requirements of NEMA Type 3, 3R, 3S, 4, 4X and 13

## Miscellaneous

A Epoxy paint exterior - extra protection for severe environments
B Viton O-Ring
C EPR O-Ring
D SIL approval and marking, per IEC61508 (includes FMEA report)
L Neon indicator light - 115 VAC
M Gold electrical contacts for extremely low current applications
(1 Amp at $125 \mathrm{VAC} ; 1 \mathrm{Amp}$ Res, 0.5 Amp Ind. at 28 VDC )
S Stainless steel diaphragm - No low over high capability (Ranges 2 \& 4 and Wetted Material 4 only)
X CE Mark
Special (Consult representative or factory)

- Non-catalog adjustable range and/or set point, deadband and proof pressure
- Media temperature capability from $-65^{\circ} \mathrm{F}$ to $+350^{\circ} \mathrm{F}$
- 10 amps 125 VDC electrical rating
- Chemical seals installed
- Optional orientation of Low Pressure Port

## Ordering Procedure

When factory presetting is desired, stipulate set point, increasing or decreasing and system pressure

- Insert available option number or letter designation as required

| H | +175 to +360 | +145 to +355 | 30/5 | 17 / 3 | 500 | 260 |
| J | +335 to +500 | +305 to +495 | 30/5 | 17 / 3 | 600 | 315 |

${ }^{\dagger}$ Deadband decreases as the adjustable set point is increased. For narrow deadband select set point in upper half of adjustable range.

## Standard Specifications

## Electrical

Snap action electrical switch
recognized by Underwriters'
Laboratories, Inc. and CSA
International

## Electrical Connection

1/2 NPT female conduit connection with terminal block

Process Connection
1/2 NPT Male Direct mount

## Temperature Range

Ambient: $-40^{\circ} \mathrm{F}$ to $+180^{\circ} \mathrm{F}$ $\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+82^{\circ} \mathrm{C}\right)$

## System Pressure

1500 psig maximum
Proof Pressure
2250 psig
Adjustment
Concealed wrench flat adjustment with range scale

Shipping Weight
Approximately 3 pounds

Order Miscellaneous
Option "D"

Weather Proof (NEMA 4 and 13)

## Ordering Sequence - Select desired option for each category

## OPTIONS

## Wetted Material

3 Steel port with stainless steel probe, Viton seal NOTE: Range "J" uses Teflon seal

## Adjustable Range

## Neo-Dyn ${ }^{\oplus}$ Series 100TC Temperature Switch/Internal Adjustment

Remote mount adjustable temperature switch for use in hazardous areas. Utilizes the efficient Nega-Rate ${ }^{\circledR}$ Belleville spring mechanism and saturated vapor sensor for quick response.

| Operating Temperature Data |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Adjustable Range Number | Adjustable Set Point Range |  | Deadband ${ }^{\dagger}$ (approx) Bottom/Top |  | Proof Temperature |  |
|  | Increasing ${ }^{\circ} \mathrm{F}$ | Decreasing ${ }^{\circ} \mathrm{F}$ | ${ }^{\circ} \mathrm{F}$ | ${ }^{\circ} \mathrm{C}$ | ${ }^{\circ} \mathrm{F}$ | ${ }^{\circ} \mathrm{C}$ |
| B | -50 to +65 | -69 to +62 | 19/3 | $11 / 2$ | 250 | 121 |
| D | +30 to +175 | +7 to +172 | 23/3 | $13 / 2$ | 400 | 204 |
| F | +95 to +250 | +70 to +247 | 25/3 | $14 / 2$ | 450 | 232 |
| H | +175 to +360 | +145 to +355 | 30/5 | 17 / 3 | 500 | 260 |
| J | +335 to +500 | +305 to +495 | 30/5 | $17 / 3$ | 600* | 315 |
| L | +485 to +720 | +445 to +714 | 40/6 | 22 / 3 | 900* | 482 |

${ }^{\dagger}$ Deadband decreases as the adjustable set point is increased. For narrow deadband select set point in upper half of adjustable range.
*Thermowell required for temperatures above $500^{\circ} \mathrm{F}$.

## Standard Specifications

## Electrical

Snap action electrical switch assemblies, Part Numbers 057-0770 \& 057-0772 (Form C) and 057-0771 \& 057-0773 (Form CC), are listed by Underwriters' Laboratories, Inc., FM Approvals, CSA International and NCC (INMETRO). See the miscellaneous option N for additional listings.
Electrical Connection
1/2 NPT male conduit connection with PVC insulated 18 AWG, 18" long leads
Process Connection
1/2 NPT Male
Remote mount. Stainless steel $6^{\prime}$ capillary with armor jacket, 10" minimum bendable tubing and $1 / 2^{\prime \prime}$ adjustable gland nut. Optional capillary lengths available.
Temperature Range
Ambient: $-40^{\circ} \mathrm{F}$ to $+180^{\circ} \mathrm{F}$
$\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+82^{\circ} \mathrm{C}\right)$
See Electrical Assembly specification sheet for Temperature Class Ratings.
System Pressure: 1500 psig max.
Proof Pressure: 2250 psig

## Adjustment

Concealed wrench flat adjustment with range scale
Shipping Weight:
Approximately 5 pounds

Order Miscellaneous
Option "D"

Explosion Proof Hermetically Sealed (NEMA 4X, 7, 9 and 13)

SANITARY PRESSURE SWITCHES
HAZARDOUS
AREA NEMA 7 \& 9

## Neo-Dyn ${ }^{\circledR}$ Series 117P Sanitary Pressure Switch/Internal Adjustment

This field adjustable, compact pressure switch is intended for low- to mid-range process applications. The Tri-Clamp ${ }^{\circledR}$ compatible, polished, process connection makes this switch ideal for food, beverage and other sanitary services. Set point stability and vibration resistance are a function of the Nega-Rate ${ }^{\circledR}$ Belleville disc spring. This unit features 316 stainless steel construction, an explosion-proof/hermetically sealed electrical assembly, 18 " standard free leads and SPDT or DPDT electrical forms and a wetted material surface polish of 9-11 micro inch Ra (0.23-0.28 micron Ra). ${ }^{\dagger}$

## Thermowells P/N 047-0014

ITT Neo-Dyn offers a line of standard thermowells for use on its direct mounted (100T/132T) or remote mounted (100TC/132TC) temperature switches. Available in 316 stainless steel with $3 / 4$ or 1 inch process connections and insertion lengths up to 12 inches.

| Specifications |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Dash No. | Figure | Material | P | Q | Hex Size | U | A |
| -02 | A | 316 CRES | 3/4 | 3/4 | 1-1/8 | 2-1/2 | 4 |
| -05 | A | 316 CRES | 1 | 7/8 | 1-3/8 | 2-1/2 | 4 |
| -04 | A | 316 CRES | 3/4 | 3/4 | 1-1/8 | 4-1/2 | 6 |
| -25 | A | 316 CRES | 1 | 7/8 | 1-3/8 | 4-1/2 | 6 |
| -28 | B | 316 CRES | 3/4 | 3/4 | 1-1/8 | 3-1/2 | 5 |
| -29 | B | 316 CRES | 1 | 3/4 | 1-3/8 | 3-1/2 | 5 |
| -07 | B | 316 CRES | 3/4 | $3 / 4$ | 1-1/8 | 4-1/2 | 6 |
| -26 | B | 316 CRES | 1 | 3/4 | 1-1/8 | 4-1/2 | 6 |
| -09 | B | 316 CRES | 3/4 | 3/4 | 1-1/8 | 7-1/2 | 9 |
| -10 | B | 316 CRES | 3/4 | 3/4 | 1-1/8 | 10-1/2 | 12 |
| -27 | B | 316 CRES | 3/4 | 3/4 | 1-1/8 | 12 | 13-1/2 |

## Envelope Dimensions

FIG. A- For use on 100T/132T Direct Mount

FIG. B— For use on 100TC/132TC Remote Mount

## Ordering Procedure

- Select a figure from the above. Figure A has a . 260 bore diameter for use on 100T/132T models while Figure B has a .385 bore diameter for use on 100TC/132TC models.
- Select a process connection size: 3/4 or 1 inch.
- Select an insertion length: U. Standard 100T/132T models use 2-1/2 inch "U" dimensions; standard 100TC/132TC models use 3-1/2 inch " $U$ " dimensions.
- Insert selected dash number at end of part number.- See example.

## Switch Accessories

## Junction Box P/N 086-0048

Explosion Proof Junction Box with terminal strip electrical connections.
Suitable for Div 1 hazardous areas when used in conjunction with any Enclosure 6 electrical used on Neo-Dyn Pressure or Temperature Switches.

## Standard Specifications

## Electrical Connection

3/4" NPT female conduit connection.
Area Classification
Suitable for use in Div 1, Class I, Groups C \& D; Class II, Group E, F \& G hazardous locations in accordance with NFPA 70.

## Wiring Guide

Terminal strips will accept 14 to 20 AWG wire when installed in accordance with NFPA 70.

## Ordering Sequence

## OPTIONS

Electrical Form
-01 SPDT Terminal Strip with markings to indicate normally open (NO), common (C) and normally closed (NC).
-02 DPDT Terminal Strip with markings to indicate two normally open (NO1, NO2), two common (C1, C2) and two normally closed (NC1, NC2) terminals.
