What is Leading Edge Detection?

What is Leading Edge Detection?

On equipment that moves a product, container, or package, sensors are used to detect the movement or presence of these items to make critical decisions. Specifically, these applications rely on detecting the leading edge of the item as quickly and as accurately as possible.

Challenges of Leading Edge Detection

Types of Containers/Packaging

Trends in packaging have migrated from boxes to more challenging targets. Polybags, Blister packs, envelopes, totes, and tubes are all commonly transported on conveyor lines and can have irregular shapes. As a result, sensing solutions need to be adapted to reliably detect a product.

Types of Conveyors/Equipment

There are many different types of conveyors and machines used to move goods. Some machines can use certain types of sensors while others may not.
