

Your Global Automation Partner

TURCK

Sensors Catalog

Linear, Angular, Rotary

A Global Leader in Industrial Automation

Turck's sensors, connectivity, and fieldbus technology products are built to be the best. As one of the most **prominent** sensor manufacturers **in the world**, we even back our sensors with a **lifetime warranty**. Turck works by bringing **rugged engineering** solutions to your industrial automation applications.

85,000+
SOLUTIONS

50+
YEARS OF INNOVATION

2,000+
EXPERIENCED SALES REPRESENTATIVES

Pioneer in non-contact
sensing technology

Developed innovative **connectivity**
solutions in response to our customers' needs

Recognized the need for advanced **I/O solutions**
in harsh duty environments

**SUPPORT &
DEDICATED SERVICE**

EXTENSIVE WARRANTY

4,000+
APPLICATION EXPERTS

RESPOND
and SOLVE over **1,200** inquiries
per day

Strategically placed manufacturing facilities in the

USA with **30** GLOBAL
SUBSIDIARIES

GLOBAL BUT LOCAL...

LINEAR AND ROTARY POSITION WHAT'S NEW?

Enhanced Series Linear Sensor

Q25

- 16 bit resolution
- 100, 200, 300, 400, 500, 600, 700, 800, 900, 1000, 1250, 1500, 1750, 2000 mm measuring spans
- 5 kHz sample rate
- 200 g shock resistance, 20 g vibration resistance

Linear Magnetic Absolute Encoders

LMA-1 LMA-4

- 10-30 VDC supply voltage
- Available in SSI
- Optional SineCosine signals
- Up to 20 m maximum measuring length

New Draw Wire

DW33, 60, 70, 75, 108, 120, 124

- DW108/DW124 available with CANopen & integrated inclinometer
- New miniature series
- Configuration suggestions available for sections with installed Turck encoder

Inductive Rotary Sensor

QR20

- Sensing element can be measured externally or inside pocket
- 20, 40, 60, 90, 120, 240 or 360° measuring ranges available
- 0.5 - 4.5 V output available

Rotary Magnetic Encoders - Incremental/Absolute

RMK-2 RMK-5 RMA-5 RMKL-2 RMKL-5

- IP rating optional up to IP69K
- Incremental output available up to 16000ppr
- Absolute output available in SSI

Large Bore Accessory

RA-174

- Bore sizes up to 45 mm
- Ordered with Turck encoder, which can include analog, incremental or absolute communication outputs
- Decoupled hollow shaft and encoder

Linear Position Technology

QR14 Miniature Series, Analog Output (U/I)

Measuring Range Specifications

Measuring span (A...B):	25 mm
Blind zone (a):	17 mm
Blind zone (b):	7.5 mm
Nominal distance:	1.5 mm

System

Resolution:	12 bit
Repeat accuracy:	≤ 0.025% of full scale
Linearity deviation:	≤ 1% of full scale
Temperature drift:	≤ ±0.01% / K
Ambient temperature:	-25 to +70 °C -40 to +70 °C (S97 version)

Electrical Data

Operating voltage:	15-30 VDC (LiU5) 8-30 VDC (LU4)
Residual ripple:	≤ 10% U _{pp}
No-load current:	≤ 50 mA
Isolation test voltage:	≤ 0.5 kV
Short-circuit protection:	yes
Wire breakage / reverse polarity protection:	yes/yes (supply voltage)
Output function:	analog output
Voltage output:	0-10 V (LiU5) 0.5-4.5 V (LU4)
Current output:	4-20 mA (LiU5)
Load resistance of voltage output:	≥ 4.7 kΩ
Load resistance of current output:	≤ 0.4 kΩ
Current consumption:	< 50 mA
Sampling rate:	700 Hz

Housing Style

Housing style:	rectangular, QR14
Dimensions:	53.5 x 49 x 14 mm
Housing material:	plastic, PBT-GF30-V0
Cable quality:	5.2 mm, LifYY, PVC (LiU5) 5.2 mm, Lif 32Y32Y, TPE (LU4)
Connection:	cable/cable with connector, M12 x 1
Vibration resistance:	55 Hz (1 mm)
Shock resistance:	30 g (11 ms)
Protection class (IEC 60529/EN 60529):	IP68/IP69K

LEDs

Power on indication:	green LED
Measuring range indication:	green/green flashing (multifunctional LEDs)

Miscellaneous

Included in delivery:	P1-Li-QR14/Q17L
-----------------------	-----------------

Product Features

- 12 bit resolution
- Current and voltage output in one device
- M12 Eurofast connector (4-pin)
- Cable, open end
- Extreme short blind zones
- Watertight (IP68/IP69K) fully potted polycarbonate housing

Measuring Range Indicated via LED

- **Green:** The positioning element is in the measuring range.
- **Green flashing:** The positioning element is in the measuring range with a lower signal quality (e.g., the distance between sensor and element is too large).
- **Off:** The positioning element is outside the programmed range.

We reserve the right to make technical alterations without prior notice.

Linear Position Technology

Q17L Compact Series, Analog Output (U/I)

Measuring Range Specifications

Max. measuring span:	50, 100, 150, 200, 300 mm
Blind zone (a):	22 mm
Blind zone (b):	9 mm (Li50 = 16 mm)
Nominal distance:	1.5 mm

System

Resolution:	12 bit
Repeat accuracy:	≤ 0.025% of full scale
Linearity deviation:	≤ 0.5% of full scale
Temperature drift:	≤ ±0.01 % / K
Ambient temperature:	-25 to +70 °C -40 to +70 °C (S97 version)

Electrical Data

Operating voltage:	15-30 VDC (LIU5) 8-30 VDC (LU4)
Residual ripple:	≤ 10% U _{PP}
No-load current:	≤ 50 mA
Isolation test voltage:	≤ 0.5 kV
Short-circuit protection:	yes
Wire breakage / reverse polarity protection:	yes/yes (supply voltage)
Output function:	4-wire, analog output
Voltage output:	0-10 V (LIU5) 0.5-4.5 V (LU4)
Current output:	4-20 mA (LIU5)
Load resistance of voltage output:	≥ 4.7 kΩ
Load resistance of current output:	≤ 0.4 kΩ
Current consumption:	< 50 mA
Sampling rate:	700 Hz

Housing Style

Housing style:	rectangular, Q17L
Dimensions:	20 x 16.5 mm, length L = measuring length + 32 mm, (Li50 + 38 mm)
Housing material:	plastic, PC-GF10
Cable quality:	5.2 mm, Li9YH-11YH, PUR (LIU5) 5.2 mm, Lif32Y32Y, TPE (LU4)
Connection:	cable/cable with connector, M12 x 1
Vibration resistance:	55 Hz (1 mm)
Shock resistance:	30 g (11 ms)
Protection class (IEC 60529/EN 60529):	IP67

Miscellaneous

Included in delivery:	P1-Li-QR14/Q17L (position element), M1.1-Q17L, M1.2-Q17L (mounting feet)
-----------------------	---

Product Features

- 12 bit resolution
- Current and voltage output in one device
- M12 Eurofast connector (5-pin)
- Cable, open end
- Extreme short blind zones
- Programmable measuring range
- Watertight (IP67) fully potted polycarbonate housing

Measuring Range Indicated via LED

- **Green:** The positioning element is in the measuring range.
- **Green/flashing:** The positioning element is in the measuring range with a lower signal quality (e.g., the distance between sensor and element is too large).
- **Off:** The positioning element is outside the programmed range.

Setting the Measuring Range

The initial and final value of the measuring range is set at the push of a button, either via a teach adapter or programming line (pin 5). Furthermore, the output curve can be inverted.

- Factory setting (0 V/4 mA at the connector end): Jumper pin 5 and pin 1 for 10 sec.
- Factory setting inverted: Jumper pin 5 and pin 3 for 10 sec.
- Setting the initial value: Move positioning element to desired position and jumper pin 5 and pin 3 for 2 sec.
- Setting the final value: Move positioning element to desired position and jumper pin 5 and pin 1 for 2 sec.

We reserve the right to make technical alterations without prior notice.

Dimensions: Q17L Series

Wiring Diagram: Q17L

Table 1:

Measuring Range	Mounting Hole Dimensions (C)
50 mm	65 mm
100 mm	108 mm
150 mm	79 mm
200 mm	104 mm
300 mm	154 mm

See page H1, Connectivity, for cables and connectors.

* Length in meters.

E-Series with Enhanced Resolution, Analog Output (U/I)

Assembly part number:
Li200P1-Q25LM2-ELIU5X3-H1151

Measuring Range Specifications

Measuring span (L):	100, 200, 300, 400, 500, 600, 700, 800, 900, 1,000 1250, 1500, 1750, 2000 mm
Blind zone (a):	29 mm
Blind zone (b):	29 mm
Nominal distance:	1.5 mm

System

Resolution:	16 bit (measuring range in mm/65536)
Repeatability:	≤ 0.02% of full scale
Linearity deviation:	≤ 0.1% of full scale (under the influence of shock and vibration)
Temperature drift:	≤ ±0.003 %/K
Ambient temperature:	-25 to +70 °C

Electrical Data

Operating voltage:	15-30 VDC
Residual ripple:	≤ 10% U _{pp}
No-load current:	≤ 50 mA
Isolation test voltage:	≤ 0.5 kV
Short-circuit protection:	yes
Wire breakage / reverse polarity protection:	yes/yes (supply voltage)
Output function:	5-wire, analog output
Voltage output:	0-10 V
Current output:	4-20 mA
Diagnostic:	output signal 24 mA or 11 V (positioning element not within detection range)
Load resistance of voltage output:	≥ 4.7 kΩ
Load resistance of current output:	≤ 0.4 kΩ
Current consumption:	< 100 mA
Sample rate:	5000 Hz

Housing Style

Housing style:	rectangular, Q25L
Dimensions:	profile 35 x 25 mm, L = measuring range + 58 mm
Housing material:	aluminum
Material active face:	plastic, PA6-GF30
Connection:	connector, M12 x 1
Vibration resistance (EN 60068-2-6):	20 g; 1.25 h/axis; 3 axis
Shock resistance (EN 60068-2-27):	200 g; 4 ms 1/2 sine
Protection class (IEC 60529/EN 60529):	IP67, IP66

LEDs

Power indication:	green LED
Measuring range indication:	green/yellow multifunctional LED

Product Features

- 16 bit resolution
- Current and voltage output in one device (5-wire, 15-30 VDC)
- M12 Eurofast connector (5-pin)
- 29 mm blind zones
- Programmable measuring range
- Captive and floating (0-4 mm from sensing face) position elements available
- Robust extruded aluminum housing
- Watertight (IP67) polycarbonate insert
- Multifunction LED

Measuring Range Indicated via LED

- **Green:** The positioning element is in the measuring range.
- **Yellow:** The positioning element is in the measuring range with a lower signal quality (e.g., the distance between sensor and element is too large).
- **Yellow flashing:** The positioning element is outside of the measuring range (max. range).
- **Off:** The positioning element is outside the programmed range but inside the total, non-programmed measuring length.

Setting the Measuring Range

The initial and final value of the measuring range is set at the push of a button, either via a teach adapter or programming line (pin 5). Furthermore, the output curve can be inverted.

- Factory setting (0 V/4 mA at the connector end): Jumper pin 5 and pin 1 for 10 sec.
- Factory setting inverted: Jumper pin 5 and pin 3 for 10 sec.
- Setting the initial value: Move positioning element to desired position and jumper pin 5 and pin 3 for 2 sec.
- Setting the final value: Move positioning element to desired position and jumper pin 5 and pin 1 for 2 sec.

Optional

- Teach lock/unlock: Jumper pin 5 and pin 1 for 30 sec. After 30 sec. the flashing changes to fast flashing. The teach lock is recommended in situations where it is necessary to prevent alterations of parameters.

We reserve the right to make technical alterations without prior notice.

See page H1, Connectivity, for cables and connectors.

Ordering Information

The Q-track linear position sensors are available in different lengths from 100 to 2,000 mm, in increments of 100 mm. The sensors, mounting accessories, and positioning elements are available individually or as a kit.

We reserve the right to make technical alterations without prior notice.

Linear Position Technology

HE-Series with Enhanced Resolution and SSI Interface

Assembly part number:

Li100P2-Q25LM1-HESG25X3-H1181

Measuring Range Specifications

Measuring span (L):	100, 200, 300, 400, 500, 600, 700, 800, 900, 1,000 mm
Blind zone (a):	29 mm
Blind zone (b):	29 mm
Nominal distance:	1.5 mm

System

Resolution:	0.001 mm
Repeatability:	10 µm (0.01 mm)
Linearity deviation:	≤ 0.1% of full scale
Temperature drift:	≤ ±0.0001 % / K
Ambient temperature:	-25 to +70 °C

Electrical Data

Operating voltage:	15-30 VDC
Residual ripple:	≤ 10% U _{pp}
Isolation test voltage:	≤ 0.5 kV
Short-circuit protection:	yes
Wire breakage / reverse polarity protection:	yes/yes (voltage supply)
Output function:	8-wire, SSI, 25 bit gray code
Process data area:	bit 0.... bit 19
Diagnostic bits:	bit 21: Positioning element left the measuring range and is outside the detectable area bit 22: Positioning element is in the measuring range, lower signal quality (e.g., distance is too large) bit 23: Positioning element is outside the measuring range) bit 24: Synchronous operation active
Current consumption:	< 50 mA
Sample rate:	5 kHz

Housing Style

Housing style:	rectangular, Q25L
Dimensions:	profile 35 x 25 mm, L = measuring range + 58 mm
Housing material:	aluminum
Material active face:	plastic, PA6-GF30
Connection:	connector, M12 x 1
Vibration resistance:	55 Hz (1 mm)
Shock resistance:	30 g (11 ms)
Protection class (IEC 60529/EN 60529):	IP67

LEDs

Power indication:	green LED
Measuring range indication:	green/yellow multifunctional LED

Product Features

- Enhanced resolution (up to 20 bit) depending on sensor length
- Enhanced sample rate of 5 kHz
- Excellent temperature stability and linearity through direct digital signal transmission
- SSI interface
- M12 Eurofast connector (8-pin)
- 29 mm blind zones
- Robust extruded aluminum housing
- Watertight (IP67) polycarbonate insert
- Multifunction LED

Measuring Range Indicated via LED

- **Green:** The positioning element is in the measuring range.
- **Yellow:** The positioning element is in the measuring range with a lower signal quality (e.g., the distance between sensor and element is too large).
- **Yellow flashing:** The positioning element is outside of the measuring range (max. range).
- **Off:** The positioning element is outside the programmed range but inside the total, non-programmed measuring length.

High-Precision Digital SSI Output

SSI (synchronous serial interface) is a 4-wire data communication standard commonly used in industry to transmit position data digitally. The conductors in the cable are shielded twisted pairs that enhance EMI/RFI protection. In addition to the clock and data wires, it also has separate power wiring.

We reserve the right to make technical alterations without prior notice.

Ordering Information

The Q-track linear position sensors are available in different lengths from 100 to 1,000 mm, in increments of 100 mm. The sensors, mounting accessories, and positioning elements are available individually or as a kit.

We reserve the right to make technical alterations without prior notice.

Linear Position Technology

E-Series with Enhanced Resolution, IO-Link Compatible

Assembly part number:
Li300P1-Q25LM1-ELIUPN8X3-H1151

Measuring Range Specifications

Measuring span (L):	100, 200, 300, 400, 500, 600, 700, 800, 900, 1,000 mm
Blind zone (a):	29 mm
Blind zone (b):	29 mm
Nominal distance:	1.5 mm

System

Resolution:	16 bit (D/A converter and IO-Link) measuring range in mm / 65536)
Repeatability:	0.0015% (0.0015 mm per 100 mm)
Linearity deviation:	≤ 0.035% of full scale
Temperature drift:	≤ ±0.003 % / K
Ambient temperature:	-25 to +70 °C

Electrical Data

Operating voltage:	15-30 VDC
Residual ripple:	≤ 10% U _{pp}
Isolation test voltage:	≤ 0.5 kV
Short-circuit protection:	yes
Wire breakage / reverse polarity protection:	yes/yes (voltage supply)
Output function:	two programmable outputs (analog output current or voltage, switching outputs, PWM, ...) IO-Link compatible Factory setting: 0-10 V on pin 2, PNP switching output on pin 4. Changes to settings via IO-Link only.
Load resistance of voltage output:	≥ 4.7 kΩ
Load resistance of current output:	≤ 0.4 kΩ
Current consumption:	< 50 mA
Sample rate:	1000 Hz

Housing Style

Housing style:	rectangular, Q25L
Dimensions:	profile 35 x 25 mm, L = measuring range + 58 mm
Housing material:	aluminum
Material active face:	plastic, PA6-GF30
Connection:	connector, M12 x 1
Vibration resistance:	55 Hz (1 mm)
Shock resistance:	30 g (11 ms)
Protection class (IEC 60529/EN 60529):	IP67

LEDs

Power indication:	green LED
Measuring range indication:	green/yellow multifunctional LED

Product Features

- Enhanced resolution of 16 bit
- Enhanced sample rate 1 kHz
- Improved linearity
- Two programmable outputs (analog output current or voltage, switching outputs, PWM) IO-Link compatible
- M12 Eurofast connector (5-pin)
- 29 mm blind zones
- Robust extruded aluminum housing
- Watertight (IP67) polycarbonate insert
- Multifunction LED

Measuring Range Indicated via LED

- **Green:** The positioning element is in the measuring range.
- **Yellow:** The positioning element is in the measuring range with a lower signal quality (e.g., the distance between sensor and element is too large).
- **Yellow flashing:** The positioning element is outside of the measuring range (max. range).
- **Off:** The positioning element is outside the programmed range but inside the total, non-programmed measuring length.

Programming and IO-Link

Output functions, measuring ranges and alarm outputs are set via a teach adapter or programming line (pin 5). Alternatively, the sensor can also be operated in IO-Link mode. For this purpose, connect the sensor to an IO-Link compatible module. The established connection is indicated by a green flashing LED. For more information, please see the corresponding instruction manual.

We reserve the right to make technical alterations without prior notice.

Linear Position Technology

PACTware™

Q-track Accessories – Position Elements

P1-Li-QR14/Q17L

Floating position element for LI-QR14 and LI-Q17L linear position sensors; transverse and longitudinal mounting possible; Nominal distance to the sensor is 1.5 mm; pairing with the linear sensor at a distance of up to 3 mm or misalignment tolerance of up to 3 mm.

P1-Li-Q25L

Captive positioning element; laterally inserted in sensor groove; include rod-end bearing to mount M5 threaded rods.

P2-Li-Q25L

Floating position element for LI-Q25L linear position sensors; Nominal distance to the sensor is 1.5 mm; pairing with the linear sensor at a distance of up to 5 mm or misalignment tolerance of up to 4 mm.

P3-Li-Q25L

Floating position element for LI-Q25L linear position sensors; operational at an offset of 90°; Nominal distance to the sensor is 1.5 mm; pairing with the linear sensor at a distance of up to 5 mm or misalignment tolerance of up to 4 mm.

CA*E-Q21

Control arm; Can be used with P1-Li-Q25L and RE-Q21 to connect the positioning element to an actuator.

* Length specified in inches.
3, 6 and 9 inches are standard lengths.
Other lengths available, consult factory for part numbers and availability.

RE-Q21

Rod End; Can be used with P1-Li-Q25L and CA*E-Q21 to connect the positioning element to an actuator.

Q-track Accessories – Mounting Accessories

M1.1-Q17L (right angle) (3 pcs per bag)
M1.2-Q17L (straight) (3 pcs per bag)

Mounting feet for inductive linear position sensor Q17L. Each sensor is delivered with a sufficient quantity of M1.1-Q17L and M1.2-Q17L for mounting.

M1-Q25L

Mounting foot for LI-Q25L linear position sensors; Two mounting feet should be used for devices with a measuring range of up to 1,000 mm; Material: stainless steel; 2 pcs. per bag.

M2-Q25L

Mounting foot for LI-Q25L linear position sensors; Two mounting feet should be used for devices with a measuring range of up to 1,000 mm; Material: stainless steel; 2 pcs. per bag.

M4-Q25L

Mounting bracket for LI-Q25L linear position sensors; Two mounting feet should be used for devices with a measuring range of up to 1,000 mm; Material: stainless steel; 2 pcs. per bag.

M5-Q25L

Mounting foot for LI-Q25L linear position sensors; Two mounting feet should be used for devices with a measuring range of up to 1,000 mm; Includes isolation sleeves; Material: anodized aluminum, nylon; 2 sets per bag.

MN-M4-Q25

Sliding blocks with M4 thread for back side groove of LI-Q25L linear position sensors; Material: Brass; 10 pcs. per bag.

Only available separately, not as a kit with linear position sensors.

We reserve the right to make technical alterations without prior notice.

Linear Position Technology

Q-track Accessories

RBVA-M5
Angle joint for M5 thread, stainless steel

ABVA-M5
Axial joint for M5 thread, stainless steel

RK 4.5T-* -RS 4.4T/S3107 Cable
To convert existing wiring from EZ-track installation with current output to Q-track current output.

RK 4.5T-* -RS 4.4T/S3108 Cable
To convert existing wiring from EZ-track installation with voltage output to Q-track voltage output.

TB4 V.2
Analog test box for sensors with analog or switching outputs, incl. batteries.

USB-2-IO-L-0002
IO-Link master with integrated USB interface for parameterization of IO-Link compliant linear position sensors via PC.

TX1-Q20L60
Teach adapter to program measuring range of inductive position sensors.

We reserve the right to make technical alterations without prior notice.

Analog Profile Series

EZ-track LDT's profile style probes use magnetostrictive technology by applying a mechanical strain pulse to a magnetostrictive waveguide that runs the length of the sensor. When the strain pulse encounters a magnetic field produced by the slide or floating magnet assembly, a current pulse is produced that is picked up by the electronic circuitry. A high

speed timer measures the time difference between the applied strain pulse and the return of the induced current pulse. This time, proportional to position is compared to the "zero" and "span" positions established during the calibration process to scale the output. Once the position has been scaled accordingly, it is converted to a signal in the form of an analog (voltage or current) output, quadrature pulse output, or digital (PWM or start/stop) outputs.

Enhanced Resolution Analog Profile Series (Q21R/Q35R) Specifications:

Output:	<u>Current:</u> 20 to 4 mA 4 to 20 mA	<u>Voltage:</u> 0 to 10 V 10 to 0 V	<u>Differential:</u> 0 to 10 V 4 to 20 mA
Load impedance:	$\leq (\text{voltage in} - 4) \div 0.02 \text{ A}$ (example: 10 VDC \leq 300 Ω)		$\geq 1000 \Omega$
Q21R span:	4 to 180 in		
Q35R span:	5 to 36 in		
Repeatability:	+/-0.006% of full span or +/-0.002 in, whichever is greater		
Resolution:	0.001 in internal (For span lengths < 65 in); 16 bit (For lengths > 65 in)		
Non-linearity:	+/-0.05% of stroke		
Operating temperature:	-4 to +158 °F (-20 to +70 °C)		
Null zone:	3.00 in		
Dead zone:	2.00 in		
Operating voltage:	13.5-30 VDC		
Current consumption:	120 mA at 15 VDC, 2.5 watts maximum		
Response time:	≤ 50 in	1 ms	
	51 to 100 in	2 ms	
	101 to 150 in	3 ms	
	151 to 180 in	4 ms	
LED:	Green = Power is applied and magnet is present in the programmed range Red = Fault, magnet is in the Null Zone, Dead Zone or lost Yellow = Magnet is out of the active programmed range, but still within the active stroke area		
Protection rating:	Electronics: IP67, IP68 optional Rod housing: IP65		
Agency approval:	CE		

Standard Resolution Analog Profile Series (Q21/Q35) Specifications:

Output:	<u>Current:</u> 20 to 4 mA 4 to 20 mA	<u>Voltage:</u> +5 to -5 V 0 to +10 V -5 to +5 V +10 to 0 V 0 to +5 V -10 to +10 V +5 to 0 V +10 to -10 V
Load impedance:	$\leq (\text{voltage in} - 4) \div 0.02 \text{ A}$ (example: 10 VDC \leq 300 Ω)	
Q21 span:	4 to 180 in	
Q35 span:	5 to 36 in	
Repeatability:	+/-0.01% of full span or +/-0.014 in, whichever is greater	
Resolution:	0.014 in for stroke lengths less than 60 in; For lengths over 60 in: 12 bits	
Non-linearity:	+/-0.05% of stroke or +/-0.028 whichever is greater	
Accuracy:	+/-0.1% of stroke or +/-0.050 whichever is greater	
Operating temperature:	-40 to +158 °F (-40 to +70 °C)	
Null zone:	3.00 in	
Dead zone:	1.50 in	
Operating voltage:	10-30 VDC	
Current consumption:	100 mA (maximum)	
Response time:	50 in or less: 1 ms updates with 5 ms settling time	
	50 in or greater: 2 ms updates with 4 ms settling time	
LED:	Green = power is applied and magnet is present in the programmed range Red = fault, magnet is in the null zone, dead zone or lost Yellow = magnet is out of the active programmed range, but still within the active stroke area	
Protection rating:	Electronics: IP67, IP68 optional Rod housing: IP65	
Agency approval:	CE, FM Class I, Div 2	

Low Profile Extrusion Housing:

The Q21 series is housed in low profile, environmentally sealed, anodized aluminum housings. The electronics and the sensing element are incorporated into a housing that is less than 1 inch tall without the need for a can or head on the sensor to house the electronics

Diagnostic LED:

The EZ-track Series utilizes a diagnostic LED that enables the operator to understand the state of the sensor dependent upon the position of the target magnet.

The LED flashes to indicate it is in AGC mode (Q21 and Q35 series). This feature simplifies programming and troubleshooting, effectively reducing setup and maintenance time.

Various Analog Outputs

Available Profile Style:

The Q21 and Q35 series may be ordered in a variety of outputs.

Although sensors may be ordered with any of the above outputs, the units may easily be changed in the field to reverse the analog signal. Thus, one model can be used for two applications by programming the "zero" and "span" appropriately.

Automatic Gain Control:

The Automatic Gain Control (AGC) feature allows the EZ-track to sense a magnet other than the standard slide magnet and adjust to the magnetic field strength accordingly. With the ability to sense a standard floating magnet up to 3/8 inch away, the user has greater mounting flexibility for various applications.

FM Approved Installation

(Class I, Division 2):

The EZ-track Q21 unit can be ordered for use in a Class I, Division 2 environment. The unit utilizes a Lock-Euro-G.

Note: Self contained piston with magnet permanently attached

Quadrature Profile Series

Direct Quadrature Output:

Directly interface to the PLC input card and reduce installation time, vendors and cost. The Q21-DQ provides A and B channel quadrature output signals that are proportional to the position of the magnet assembly along the length of the probe, and output directly from the transducer to the controller. The quadrature output makes it possible to directly interface to virtually any incremental encoder input or counter card, eliminating costly absolute encoder converters and special PLC interface modules.

An index channel (Z) is also provided and its position may be set by the user at any position along the active system. The A, B and Z channels are differential outputs: the connection for each output consists of two signal wires. These are typically described as the "+" and "-" signals. Differential signals are much less prone to interference caused by electrical noise or ground loops often found in single ended connections.

Quadrature Profile Series (Q21-DQ/Q35-DQ) Specifications:

Output:	Quadrature, A, \bar{A} , B, \bar{B} , Z, \bar{Z}	
Span:	5 to 180 in (Q35 maximum span is 36 in)	
Repeatability:	+/-0.006% of full span	
Resolution:	0.001 in internal (1000 pulses per in)	
Operating temperature:	-4 to +158 °F (-20 to +70 °C)	
Null zone:	3.00 in	
Dead zone:	2.00 in	
Operating voltage:	13.5-30 VDC	
Current consumption:	3 watts maximum (1 watt typical)	
Response time:	≤ 40 in	1 ms
	≤ 41 to 100 in	2 ms
	101 to 150 in	3 ms
	151 to 180 in	4 ms
Inputs:	Option N	NPN (used with sourcing outputs)
	Option P	PNP (used with sinking outputs)
	Option T	TTL
	Option R	5 V differential
	Option L	10 to 30 VDC, Volt = Vin-1 Volt
Output frequency:	10 kHz - 1 MHz	
Nonlinearity:	+/-0.05% of full span	
LED:	Green = Power is applied and magnet is present in the programmed range Red = Fault, magnet is in the Null Zone, Dead Zone or lost	
Protection rating:	Electronics: IP67, IP68 optional Rod housing: IP65	
Agency approval:	CE	

Incremental Output, Absolute Functionality:

The Q21-DQ allows you to use an incremental output, while taking advantage of an absolute sensing technology. The Burst Input on the transducer triggers a data transfer of all incremental position data relative to the transducer's zero position. This can be used to achieve absolute position updates when power is restored to the system or anytime an update is needed to re-zero or home the machine.

Programmable Zero Point:

The zero input allows you to set the probes reference position at any point along the active span. The probe will output an increasing or decreasing signal based on the direction the magnet is moving in relation to the established zero point. See Quadrature Part Number Key to select storage mode.

Volatile Storage:

The zero point will be kept until a new zero pulse is sent or until the probe loses power.

The zero point can be programmed an infinite number of times.

Non-Volatile Storage:

The probe will store the zero position even in the event of a power failure. The zero point can be set 100,000 times.

Transducer Inputs:

The burst and zero inputs are single ended connections: the connection for each input consists of only one wire. The Q21-DQ is available with either +24 VDC level signal or TTL level thresholds. Additionally, the 24 VDC may be specified as either sinking or sourcing relative to the probe's input.

Quadrature Output Resolution and Speed:

The internal resolution of the Q21-DQ transducer is 0.001 inches. This would be represented to the encoder input device by specifying an output resolution of 1,000 cycles per inch (CPI).

Replace Incremental Output Devices:

The Q21-DQ may be used in certain applications to replace incremental rotary and linear encoders. The quadrature output may be used in applications requiring 0.001 inch resolution and repeatability.

Velocity Feedback:

The EZ-track quadrature produces pulses that are sent to the controller in packets at a fixed frequency. The period of the pulses does not change with magnet velocity. Therefore, velocity cannot be determined from the pulse packets unless the controller can interpolate velocity from position over time. If your application requires a velocity feedback, please consider the Linear Encoder on pages B32-B37 or consult factory.

Frequency or Pulse Rate:

For a typical incremental encoder output, the resolution of the encoder and the speed of travel govern the frequency and pulse width of the output pulses. The output pulse rate from the EZ-track transducer is fixed and controlled internally. This output frequency is user specified (10 kHz to 1 MHz) so that it does not exceed the maximum input rate of the counter card. If the controller's maximum input frequency falls between two available frequencies, choose the lower frequency.

Output Drivers:

The Q21-DQ uses an OL7272 line driver and may be configured for either a TTL level output or a 10-30 VDC level output. Option R has a 5 VDC TTL level output regardless of input power. Option L has an output of 1 volt less than the probe's input voltage and should be used when driving input cards that are not TTL compatible.

Digital Profile Series

The Q21D is a non-contact LDT with a digital output. This transducer utilizes magnetostrictive technology to give absolute position that is repeatable to .006% of the active sensing distance. It also has the same auto-tuning capability that the other profile series transducers offer, so that it can adjust its signal strength to various magnets.

There is a diagnostic LED that is located at the connector end of the probe and provides visual status information regarding the operation of the Q21D. The indications are specified in the table below. The Q21D digital transducer provides either a Start/Stop or a Variable Pulse signal interface that is proportional to the position of the slide magnet assembly along the length of the probe.

Digital Profile Series (Q21D/Q35D) Specifications:

Output:	Start/Stop Pulse: External interrogation; Variable Pulse: Internal or External interrogation
Number of recirculation:	Variable Pulse: 001 (standard) to 127
Span:	5 to 180 in (Q35 maximum span is 36 in)
Repeatability:	+/-0.006% of full span
Hysteresis:	+/-0.02% of full span
Operating temperature:	-4 to +158 °F (-20 to +70 °C)
Null Zone:	3.00 in
Dead Zone:	2.00 in
Operating voltage:	13.5-30 VDC
Current consumption:	120 mA at 15 VDC, 2.5 watts maximum
Shock:	Tested to 40 g
Vibration:	MIL-STD810E, 10G rms random, 20 Hz - 2 kHz
LED:	Green = power is applied and magnet is present Red = fault, magnet is in the null zone, dead zone or lost Yellow = no interrogation signal detected
Protection rating:	Electronics: IP67, IP68 optional Rod housing: IP65
Agency approval:	CE

Start/Stop (RS):

The Start/Stop signal interface of the Q21D digital output series is a differential RS-422 output. To initiate a start pulse, an external device must be used, and should be a minimum of 1 ms in duration. A stop pulse of 1 ms in duration will follow. The time delay from the leading edge of the start pulse to the leading edge of the stop pulse is proportional to the distance from the Null Zone to the Magnet.

Variable Pulse (VP):

The Variable Pulse signal interface digital output is a pulse width modulated signal (RS-422). The Q21D LDT can be ordered with either an external (VPE) or internal (VPI) interrogation.

External interrogation occurs when an external device connected to the Q21D-VPE generates a start pulse. This start pulse should be a minimum of 1 ms in duration. Within 50 nanoseconds after the leading edge of the start pulse has been received, the LDT will generate an output pulse. The duration of the output pulse is proportional to the distance from the Null Zone to the Magnet.

The Q21D-VPI generates an internal interrogation, and will continually output pulse width modulated signals. The duration of this output pulse is also proportional to the distance from the Null Zone to the Magnet.

Rod Style Series

Rugged Rod Style Housings:

Transducers designed to survive in harsh industrial environments to reduce downtime on the plant floor.

The R10 housing, sensing rod and components are designed and constructed to withstand heavy duty applications, such as those found in lumber mills, steel mills and stamping plants. They have been lab tested and field proven to withstand 2000 g of shock and 30 g of random vibration without false signals or mechanical damage.

an aluminum housing with O-ring seals for an IP67 environmental rating.

Although R10 sensors can be ordered with any of the outputs below, the units can easily be changed in the field to reverse the output signal. Thus, one model can be used for two applications by programming the “zero” and “span” appropriately. The differential feature allows the gap distance between two magnets to be measured. The magnets must remain within the active span at all times and cannot be any closer than 2.5 inches to each other.

In addition, the **R10's** electronics are enclosed in

Rod Style Series (R10) Specifications:

	LT Analog	LTX Analog	LTX Digital	LTX SSI

Glossary of Terms: Linear Position Sensors

Absolute Sensing: Position is accurately known at power ON without the need for a reference or home position.

Magnetostrictive Technology: A linear sensor technology based on a magnetic principal of operation used in all EZ-track LDTs.

Repeatability: The difference in the indicated position of a single point when that point is repeatedly approached from the same direction under the same ambient conditions.

Accuracy: The difference between the target point and the point actually indicated by the sensor with relation to a fixed reference.

Non-Linearity: The distance the indicated position of the positioning element along the span varies from the actual physical position.

Resolution: The smallest incremental change in position that can be detected and indicated as an output.

Blind Zone: Term used to describe the areas of the Q-track sensors where it no longer picks up the positioning element.

Non-Volatile: Position is held in memory and will not be lost on power down.

Span: The area of a linear sensor that reacts to the positioning element as it moves over it, producing an output signal.

Dead Zone: An area at the end of the EZ-track sensor that is opposite the connector where the magnet cannot be accurately sensed.

Null Zone: An area at the connector end of the sensor where the magnet cannot be accurately sensed.

Span Point: The end point of the analog measuring distance at which the output signal equals the greatest value of the analog scale.

Hysteresis: The difference of the measured value when approaching a defined point from opposite directions.

Quadrature Cycle Output Frequency: The fixed frequency at which the pulse rate is transmitted out of the probe.

SSI: Synchronous Serial Interface is a standard protocol for serial interface between sensors and controllers.

Incremental Sensing: A relative position feedback device whose signal is always referenced to the zero position. The sensor produces a digital square wave pulse train that is fed into an up/down counter chip or clock to derive position.

RLC: Stands for Resistance, Inductance and Capacitance. It is the principal of operation for all Turck Q-track sensors. The positioning element is a passive coil circuit that is excited by an emitter coil and the resulting inducted voltage is picked up by receiver coils.

Volatile: Position held in memory that is lost on power down.

Zero Point: The beginning point of the analog measuring distance at which the output signal equals the lowest value of the analog scale. The Zero Point is also used as the reference position for the incremental scale used in quadrature output probes.

Linear Position Technology

Linear Magnetic Position System

Linear Magnetic Measurement System LM-2/LMT-2

High IP

Temperature

Shock/vibration resistant

Reverse polarity protection

Robust

- **Fully potted diecast metal housing.**
- **Increased ability to withstand vibrations and rough installation:** Eliminates machine downtime and repairs. Non-contact technology results in high shock and vibration resistance.
- **Stays sealed even when subjected to harsh everyday use.** Die cast metal housing with up to IP68/IP69K protection.

Compact

- **Installation depth only 10 mm, width of magnetic band 10 mm.**
- **Installation height only 28 mm.** May be used even where space is very tight.

Versatile

- **Fast start-up of the measuring system:** Easy attachment of the magnetic band and the sensor head.
- **Easy mounting with large tolerances possible:** Distance of sensor head to magnetic band from 0.1 to 1.0 mm; tolerates lateral misalignment + 1 mm; LED warning indicator when magnetic field is too weak.

Technical Data Magnetic Sensor LM-2:

Output circuit [Key Code]:	Push-Pull [2R]	RS422 [4K]
Supply voltage:	4.8 to 30 VDC	4.8 to 26 VDC
Load/channel, max cable length:	±20 mA, max. 30 m	120 Ohm, RS422 standard
Current consumption (without load):	typ. 25 mA, max. 60 mA	
Short circuit protected:	yes	yes ¹⁾
Min. pulse interval:	1 μs (edge interval) corresponds to 4 μs/cycle (see signal figures below)	
Output signal:	A, \bar{A} , B, \bar{B} , I, \bar{I}	
Reference signal:	Index periodical	
System accuracy:	typ. 200 μm, max. ± (0.04 + 0.04 x L) mm, (L in [m], up to L = 50 m, at T = 20 °C)	
Repeat accuracy:	±1 increment	
Resolution and speed ²⁾ :	100 μm (post-quadrature), max. 25 m/s 25 μm (post-quadrature), max. 4 m/s 10 μm (post-quadrature), max. 6.5 m/s	
Permissible alignment tolerance:	see draft "Mounting tolerances"	
Gap sensor / magnetic band:	0.1-1.0 mm (0.4 mm recommended)	
Offset:	max. ±1 mm	
Tilting:	max. 3°	
Torsion:	max. 3°	
Working temperature:	-4 to +176 °F (-20 to +80 °C)	
Shock resistance:	500 g / 1 ms	
Vibration strength:	30 g / 10-2,000 Hz	
Protection class:	IP67 according to DIN 60529 (housing)	
Humidity:	100%, condensation possible	
Housing:	Zinc die-cast	
Cable:	2 m, PUR 8 x 0.14 mm ² , shielded, may be used in trailing cable installations	
Status-LED:	Green: Pulse-index; Red: Error Speed too high or magnetic fields too weak (for sensors LM-2*10-**020-*21 and LM-2-*10-**050-*)	

RoHS compliant acc. to EU guideline 2011/65/EU

Function Principle:

Signal Figures

- 9) Periodic index signal (every 2 mm)
The logical assignment A, B and I-Signal can change
- 8) Min. pulse interval: pay attention to the instructions in the technical data

¹⁾ A max. of one channel only may be short-circuited: (when +V = 5 V, a short circuit to another channel, 0 V, or +V is permissible.) (when +V = 5-30 V, a short circuit to another channel or to 0 V is permissible.)

²⁾ At the listed rotational speed the min. pulse interval is 1 μs, this corresponds to 250 kHz. For the max. rotational speed range a counter with a count input frequency of not less than 250 kHz should be provided.

Linear Magnetic Measurement System LM-2/LMT-2

Technical Data Magnetic Band LMT-2:

Pole gap:	2 mm from pole to pole
Dimensions:	Width: 10 mm, Thickness: 1.7 mm incl. masking tape
Temperature coefficient:	$(11 \pm 1) \times 10^{-6} / K$
Temperature ranges:	working temperature: -4 to +176 °F (-20 to +80 °C) storage temperature: -40 to +176 °F (-40 to +80 °C)
Mounting:	adhesive joint
Measuring:	0.1 m (to receive an optimal result of measurement, the magnetic band should be ca. 0.1 m longer than the desired measuring length)
Bending radius:	≥ 50 mm

Linear Position Technology

Linear Position Technology

Linear Magnetic Position System

Absolute Linear Magnetic Measurement System LMA-1

Robust

- **Non-contact magnetic absolute measuring technology - therefore no wear - no referencing movement required.**
- **Sturdy housing with IP64 protection.**
- **For highly dynamic control.**
- **Stainless steel tape protecting the magnetic band.**

Simple Installation

- **Fast start-up of the measuring system:** Easy attachment of the magnetic band and the sensor head.
- **Easy mounting with large tolerances possible:** Distance of sensor head to magnetic band from 0.01 to 0.2 mm; tolerates lateral misalignment +1 mm; LED warning indicator when magnetic field is too weak.

Versatile

- **High resolution 1 µm / measuring length max. 8 m.**
- **Optional SinCos signal (1 Vpp) for dynamic movement control with 1 mm pole pitch**

Technical Data Magnetic Sensor LMA-1:

Mechanical characteristics

Weight:	approx. 0.22 lbs (0.1 kg)
Working temperature:	+14 to +157 °F (-10 to +70 °C) (non condensing)
Storage temperature:	-13 to +185 °F (-25 to +85 °C)
Protection acc. to EN 60529:	IP64
Housing:	aluminum
Max. speed:	SinCos reading 32.8 ft/s (10 m/s) permanent absolute positions reading 3.28 ft/s (1 m/s)
Shock resistance acc. to EN 60068-2-27:	500g (5000 m/s ²), 1 ms
Vibration resistance acc. to EN 60068-2-6:	30g (300 m/s ²), 10-2000 Hz
Distance sensor head / magnetic band:	0.01 - 0.2 mm incl. masking tape (recommended 0.2 mm)
Measuring length:	max. 8 m
Type of connection (standard):	M12 connector, 12 pin

Electrical characteristics:

Power supply:	10-30 VDC ±10%
Residual ripple:	< 10 %
Current consumption:	max. 150 mA
Reverse polarity protection:	yes
Short circuit protected:	yes
RoHS compliant acc. to EU guideline 2011/65/EU	

Accuracy:

Measuring principle:	absolute + incremental (option)
System accuracy at 68 °F [20 °C]:	max. ± (10 + 20 x L) µm L = measuring length in meters
Repeat accuracy:	±1 increment
Resolution:	0.001 mm
LED, red:	lights up when distance too large

Linear Magnetic Measurement System LMA-1

SSI interface:

Output driver:	RS485 transceiver type	
Permissible load / channel:	max. ±20 mA	
Signal level:	HIGH	typ. 3.8 V
	LOW at I _{Load} = 20 mA	typ. 1.3 V
Clock rate:	25 bit (24 + 1 failurebit for distance)	
Code:	Gray	
SSI clock rate:	80 kHz - 0.4 MHz	
Monoflop time:	≤ 40 μs	
Data refresh rate:	≤ 250 μs	

Option SinCos interface:

Max. frequency -3dB:	400 kHz	
Signal level:	1 V _{pp} (±10%)	
Short circuit protected:	yes	
Pulse rate:	1 SinCos per 1 mm pole	

Magnetic band LMAT-1:

Pole gap:	basic pole pitch 1 mm	
Dimensions:	width	10 mm
	thickness	1.97 mm incl. masking tape
Relative linear expansion:	$\Delta L = L \times \alpha \times \Delta \delta$ L = measuring length in meters $\alpha = 16 \times 10^{-6}$ 1/K temperature coefficient $\Delta \delta$ = relative temperature change based on +68 °F [20 °C] in °K	
Working temperature:	-4 to +176 °F [-20 to +80 °C]	
Mounting:	adhesive joint	
Additional length:	100 mm in order to obtain an optimal measuring result, the magnetic band should be about 0.1 m longer than the required measuring length	
Min. bending radius for storage:	≥ 150 mm	
Material metal tape:	precision steel strip 1.4404 acc. to EN 10088-3	

We reserve the right to make technical alterations without prior notice.

Magnetic Band LMAT-1

- 1) Length L, max 8 m
- 2) Masking tape
- 3) Magnetic band

We reserve the right to make technical alterations without prior notice.

Absolute Linear Magnetic Measurement System LMA-4

 DC 10 ... 30 V	 20 m	 1.5 mm	 4 m/s	 0.01 μm	 IP40	 Reverse polarity protection	 Shock/vibration resistant	 -10 to +70 °C	 Magnetic sensor
Power Supply	Max measuring length	Max distance to measuring tape	Max speed	High resolution	Protection			Temperature range	

Robust

- Rugged die-cast zinc housing.
- Position changes are also detected when de-energized. No referencing movement required - no wear.
- Automatic distance detection in case of too large distance between the sensor and the magnetic band.
- Stainless Steel tape protecting the magnetic band.
- Interfaces: SSI

Versatile

- Resolution 0.01 mm / measuring length max. 20 m.
- Large mounting tolerances.

Simple Installation

- Simple glued assembly of the magnetic band.
- Requires very little installation space.
- LED warning signals in case of too weak magnetic field.

Technical Data Magnetic Sensor LMA-4:

Mechanical characteristics:

Weight:	approx. 0.41 lbs (0.19 kg)
Working temperature:	+14 to +158 °F (-10 to +70 °C) (non condensing)
Storage temperature:	-13 to +185 °F (-25 to +85 °C)
Protection acc. to EN 60529:	IP40
Housing:	zinc die-cast
Max. speed:	13.1 ft/s (4 m/s)
Shock resistance acc. to EN 60068-2-27:	500g (5000 m/s ²), 1 ms
Vibration resistance acc. to EN 60068-2-6:	30g (300 m/s ²), 10-2000 Hz
Distance sensor head / magnetic band:	0.1 - 1.5 mm incl. masking tape (recommended 0.5 mm)
Measuring length:	max. 20 m
Type of connection (standard):	cable, 1.5 m PUR

Electrical characteristics:

Linear Position Technology

Linear Position Technology

Linear Magnetic Position System

Draw Wire Encoder DW33

-10 to +80 °C

Temperature range

0.8 m/s

Maximum speed

IP50

High protection level

Miniaturized

- Measuring length up to 600 mm.
- Wide temperature range.

Versatile

- Available with potentiometer, voltage or current outputs.

Simple

- For applications with low travel speeds.
- Easy to install.

Mechanical Characteristics (Draw Wire Mechanics):

Extension force:	Fmin	0.67 lbs (3.0 N)
Max. speed:		2.62 ft/s (0.8 m/s)
Linearity:		±0.35%
Repeat accuracy:		±0.15 mm
Working temperature:		+14 to +176 °F (-10 to +80 °C)
Weight:		approx. 0.13 lbs (60 g)
Materials:	housing: plastic	wire: stainless steel Ø 0.4 mm, plastic coated
Protection (acc. to EN 60529):		IP50

Operating Principle:

Construction:

The core of a draw wire device is a drum mounted on bearings, onto which a wire is wound. Winding takes place via a spring-loaded device.

Note:

Exceeding the maximum extension length of the draw wire will lead to damage to the wire and the mechanics.

We reserve the right to make technical alterations without prior notice.

Draw Wire Encoder DW33

Electrical Characteristics (Analog Output):

Analog output [Key code]:	0-10 V [8D]	4-20 mA [7F]	Potentiometer [PB]
Supply voltage:	15-28 VDC	15-28 VDC	max. 48 VDC
Output:	0-10 V	4-20 mA	10 kOhm

Connection diagrams:

Recommended load current:	15 mA	-	-
Load:	-	max. 500Ω	-
Temperature range:	-14 to +176 °F (-10 to +80 °C)	-14 to +176 °F (-10 to +80 °C)	-14 to +176 °F (-10 to +80 °C)

ROHS compliant according to EU guideline 2011/65/EU

Linear Position Technology

Linear Position Technology

Draw Wire Mechanics with Encoder or Analog Sensor

Mini Draw Wire Encoder DW55

Temperature

Short-circuit protected

Reverse polarity protection

Rugged

- Reinforced plastic housing (1 m wire).
- Stainless steel cable
- Zinc die cast housing (2 m wire).

Versatile

- Radial or axial cable exit.
- Analog outputs 4-20 mA, 0-10 V or resistance.
- Incremental push-pull output.
- Absolute encoder output options.

Compact

- Measuring length up to 2,000 mm.
- 40 x 40 x 58 mm housing (1 m wire).
- 40 x 40 x 72.3 mm housing (2 m wire).

Mechanical Characteristics (Draw Wire Mechanics):

Measuring range:	1,000 mm	2,000 mm
Max. speed:	2.62 ft/s (0.8 m/s)	3.28 ft/s (1.0 m/s)
Working temperature	+32 to +122 °F (0 to +50 °C)	+14 to +176 °F (-10 to +80 °C)
Protection acc. to EN60529:	IP50	IP65
Weight:	approx. 0.44 lbs (0.2 kg)	0.7 lbs (0.32 kg)
Required force:	0.45 lbs (2N)	0.45 lbs (2N)
Repeat accuracy:	±0.15 mm	±0.15 mm
Linearity:	±0.35%	±0.35%

Material:
Housing: plastic/zinc die cast
Wiring: stainless steel Ø 0.45 mm, plastic coated

Electrical Characteristics
(Absolute Encoder):

The electrical characteristics of the draw wire encoder assembly may be found in the catalog pages of the encoder selected.

Mini Draw Wire Encoder DW55

Mechanical Characteristics (Draw wire with incremental encoder):

Measuring range:	up to 2,000 mm
Absolute accuracy:	±0.1% for the whole measuring range
Repetition accuracy:	±0.15 mm per direction of travel
Resolution (incremental):	0.1 mm (0.025 mm post-quadrature) [standard encoder with 1,000 ppr.]
Traversing speed:	max. 2.62 ft/s (800 mm/s)
Required force:	approx. 2.25 lbs (10 N) (on wire)
Material:	Housing: reinforced plastic, Wire: stainless steel ø 0.45 mm, plastic coated
Weight:	approx. 0.463 lbs (0.210 kg)
Protection acc. to EN 60529:	IP54 from housing side
Working temperature:	-4 to +185 °F (-20 to +85 °C)
Shock resistance acc. to DIN-IEC 68-2-27:	100 g (1,000 m/s ²), 6 ms
Vibration resistance acc. to DIN-IEC 68-2-27:	10 g (100 m/s ²), 55-2,000 Hz
The electrical characteristics of the draw wire encoder assembly may be found in the catalog pages of the encoder selected.	

Electrical Characteristics (Absolute Encoder):

The electrical characteristics of the draw wire encoder assembly may be found in the catalog pages of the encoder selected.

Electrical Characteristics (Incremental Output):

Output circuits [Key Code]:	Push-Pull [2D]	Push-Pull [2A]
Supply voltage:	5-24 VDC	8-30 VDC
Current consumption (without load):	max. 50 mA	max. 50 mA
Permitted load per channel:	max. ±50 mA	max. ±50 mA
Pulse rate:	max. 160 kHz	max. 160 kHz
Switching level high:	min. +V – 2.5 V	min. +V – 3 V
Switching level low:	max. 0.5 V	max. 2.5 V
Rise time tr:	max. 1 µs	max. 1 µs
Fall time tf:	max. 1 µs	max. 1 µs
Short-circuit protected:	yes	yes
Electrical Characteristics (Absolute Encoder):	The electrical characteristics of the draw wire encoder assembly may be found in the catalog pages of the encoder selected.	

Description of the Incremental Encoder (Connected on Load Side)

- Compensation for temperature and aging
- Short-circuit protected outputs
- Reverse polarity protected power-supply input
- Push-pull output

Electrical Characteristics (Analog Output):

Analog output [Key Code]:	0-10 V [8C]	4-20 mA [7F]	Potentiometer 10 kΩ [PB]
Supply voltage:	15-28 VDC	15-28 VDC	Max. 48 VDC
Temperature range:	+32 to +122 °F (0 to +50 °C)	+32 to +122 °F (0 to +50 °C)	+32 to +122 °F (0 to +50 °C)
Load:	max 500 Ω	max 500 Ω	-

Linear Position Technology

Linear Position Technology

Draw Wire Mechanics with Encoder or Analog Sensor

Draw Wire Encoder DW70

Wide temperature range

Reverse polarity protection

Maximum acceleration

Long service life

High protection level

Robust

- **Corrosion resistant:** Titanium-anodized aluminium housing.
- **High-strength stainless steel draw wire.**
- **Low friction design.** Diamond-polished ceramic guide.
- **Wide temperature range.**

Analog output

CANopen

SAE J1939

Versatile

- **Suitable for various sensors/encoders:** Absolute encoders with fieldbus interfaces, incremental, and analog.
- **Quick mounting:** Fastening by means of two screws.
- **Flexible connection options:** Cable, M12 connector, radial, axial.
- **Linearity up to 0.02%.**

Fast

- **High traverse speed.**
- **High acceleration:** Dynamic spring traction by means of a constant force spring.

Mechanical Characteristics (Draw Wire Mechanics):

Measuring range:	250 mm	500 mm	1250 mm
Extension force:	Fmin	1.53 lbs (6.8 N)	0.76 lbs (3.4 N)
	Fmax	1.78 lbs (7.9 N)	0.90 lbs (4.0 N)
Max. speed:	26.2 ft/s (8 m/s)	26.2 ft/s (8 m/s)	32.8 ft/s (10 m/s)
Max. acceleration:	656.16 ft/s ² (200 m/s ²)	656.16 ft/s ² (200 m/s ²)	984.25 ft/s ² (300 m/s ²)
Linearity (of measuring range):	analog sensor	±0.15%	±0.1%
	encoder	±0.05%	±0.02%
Weight:	approx. 0.72 lbs(330 g) (depending on the sensor/encoder used)		
Materials:	housing: titanium-anodized aluminium		
	wire: stainless steel Ø 0.5 mm		
Protection (encoder only):	IP65		

Operating Principle:

Construction:

The core of a draw wire device is a drum mounted on bearings, onto which a wire is wound. Winding takes place via a spring-loaded device.

Note:

Exceeding the maximum extension length of the draw wire will lead to damage to the wire and the mechanics.

Draw Wire Encoder DW70

Electrical Characteristics (Analog Output):

Analog output [Key code]:	0-10 V [8C]	4-20 mA [7E]	Potentiometer [PA]
Output:	0-10 V galvanically isolated, 4 conductors	4-20 mA, 2 conductors	1 kOhm
Supply voltage:	12-30 VDC	12-30 VDC	max. 30 VDC
Recommended slider current:	-	-	< 1 μ A
Max. current consumption:	22.5 mA (no load)	50 mA	-
Reverse polarity protection:	yes	yes	-
Operating temperature:	-4 to +185 °F (-20 to +85 °C)	-4 to +185 °F (-20 to +85 °C)	-4 to +185 °F (-20 to +85 °C)

Connection diagrams:

ROHS compliant according to EU guideline 2011/65/EU

Electrical Characteristics (Digital Output):

The electrical characteristics of the draw wire encoder assembly may be found in the catalog pages of the encoder selected.

Linear Position Technology

Draw Wire Mechanics with Encoder or Analog Sensor

Draw Wire Encoder DW155

Wide temperature range

Reverse polarity protection

Max acceleration

Long service life

High protection level

Robust

- **Corrosion resistant:** Titanium-anodized aluminium housing.
- **High-strength stainless steel draw wire.**
- **Low friction design.** Diamond-polished ceramic guide.
- **Wide temperature range.**

Versatile

- **Suitable for various sensors/encoders:** Absolute, fieldbus, incremental and analog.
- **Quick mounting:** Fastening by means of two screws.
- **Flexible connection options:** Cable, connector, radial, axial.

Fast

- **High traverse speed.**
- **High acceleration:** Dynamic spring traction by means of a constant force spring.

Mechanical Characteristics (Draw Wire Mechanics):

Measuring range:	6,000 mm (6 meter)
Extension force:	Fmin 1.98 (8.8 N) Fmax 2.77 lbs (12.3 N)
Max. speed:	32.8 ft/s (10 m/s)
Max. acceleration:	459.3 ft/s ² (140 m/s ²)
Linearity:	analog output: ±0.1% (of the measuring range) encoder: ±0.05% (of the measuring range)
Weight:	approx. 3.5 lbs (1,600 g) (depending on the sensor/encoder used)
Materials:	housing: titanium-anodized aluminium wire: stainless steel Ø 0.5 mm
Protection (encoder only):	IP65

Operating Principle:

Construction:

The core of a draw wire device is a drum mounted on bearings, onto which a wire is wound. Winding takes place via a spring-loaded device.

Note:

Exceeding the maximum extension length of the draw wire will lead to damage to the wire and the mechanics.

Linear Position Technology

Draw Wire Mechanics with Encoder or Analog Sensor

Draw Wire Encoder DW155

Electrical Characteristics (Analog Sensor, Scaled to Measuring Range):

Analog output [Key Code]:	0-10 V [8C]	4-20 mA [7E]	Potentiometer [PA]
Output:	0-10 V galvanically isolated, 4 conductors	4-20 mA, 2 conductors	1 kOhm
Supply voltage:	12-30 VDC	12-30 VDC	max. 30 VDC
Recommended slider current:	-	-	< 1 µA
Max. current consumption:	22.5 mA (no load)	50 mA	-
Reverse polarity protection:	yes	yes	-
Operating temperature:	-4 to +185 °F (-20 to +85 °C)	-4 to +185 °F (-20 to +85 °C)	-4 to +185 °F (-20 to +85 °C)

Linear Position Technology

Draw Wire Mechanics with Encoder or Analog Sensor

Draw Wire Encoder DW60

Long service life

Wide temperature range
-40 to +85 °C

High protection level
IP69K

Redundancy

V4A

Robust

- Protection level up to IP69K and wide temperature range from -40 to +85 °C.
- The titanium-anodized aluminum housing and the stainless steel wires allow using the mechanics even in harsh conditions.
- Wire diameter (stainless steel, V4A) up to Ø1 mm - ideal for outdoor applications.

Analog output
CANopen

Versatile

- Measuring length up to 4 m.
- The right measuring wire and the right wire fastening for every application.
- Various constructions: open, closed housing or housing with perforated sheet steel cover.

Advantage

- Redundant outputs (mA, V, R, CANopen).
- Linearity up to ±0.1% of the measuring range.

Technical Data (Draw Wire Mechanics):

Linearity:	±0.5%, ±1% (See Linearity Table below)
Improved linearity:	±0.25% or ±0.1%
Resolution:	see electrical characteristics
Sensor element:	potentiometer
Output signal:	4 - 20 mA, 0 - 10 V, potentiometer, CANopen
Redundant output signal:	optional for: 4 - 20 mA, 0 - 10 V, potentiometer, CANopen
Connection:	axial M12 connector or axial cable outlet (TPE cable), standard length 2 m
Protection:	IP67, optional IP69K (only with cable outlet)
Humidity:	max. 90 % relative, no condensing
Max. speed:	9.84 ft/s [3.0 m/s]
Acceleration:	164.04 ft/s ² [50.0 m/s ²]
Weight:	up to approx. 0.92 lbs [420 g] depending on the measuring range
Housing:	aluminum, spring housing PA6
Spring force:	0.89 - 1.34 lbs [4 - 6 N] depending on the measuring range

Measuring Wire Characteristics:

V4A, Ø0.5 mm:		
no.	1.4401	
Breaking force	29.23 lbs (130 N)	
TK	16 x 10 ⁻⁶ K ⁻¹	
V4A, Ø0.7 mm:		
no.	1.4401	
Breaking force	48.56 lbs (216 N)	
TK	16 x 10 ⁻⁶ K ⁻¹	
V4A, Ø1.0 mm:		
no.	1.4401	
Breaking force	107.5 lbs (478 N)	
TK	16 x 10 ⁻⁶ K ⁻¹	

Operating Principle:

Construction:

The core of a draw wire device is a drum mounted on bearings, onto which a wire is wound. Winding takes place via a spring-loaded device.

Note:

Exceeding the maximum extension length of the draw wire will lead to damage to the wire and the mechanics.

We reserve the right to make technical alterations without prior notice.

PDO:	1x TPDO, static mapping
PDO functions:	Event-triggered, time-triggered, Sync-cyclic, Sync-acyclic
Transmission rate:	Default: 250 kbit/s, 1Mbps, 800, 500, 250, 125, 50, 20 kbps adjustable via SDO
Bus connection:	M12 connection, 5-pin
Integrated bus terminating resistor:	120 ohms ready-to-activate via SDO
Bus, galvanic isolation:	no
Power supply:	8-30 VDC
Working temperature:	-4 to +185 °F (-20 to +85 °C) Optional: -40 to +185 °F (-40 to +85 °C)
Current consumption:	typ. 10 mA at 24 V, 20 mA at 12 V
Measuring rate:	1 kHz with 16 bit resolution
Repeat accuracy:	\pm 0.5%, \pm 0.25% or \pm 0.1% (according to the selected linearity)
Resolution:	0.002% of the measuring range
Reverse polarity protection:	yes
Electromagnetic compatibility acc. to EN61326-1:2013	
RoHS compliant acc. to EU guideline: 2011/65/EU	

Accessories:

- See page H1, Connectivity, for cables and connectors

Linear Position Technology

Draw Wire Mechanics with Encoder or Analog Sensor

Draw Wire Encoder DW75

-40 to +80 °C
Wide temperature range

Long service life

High protection level

Robust

- Compact housing.
- High-strength stainless steel draw wire.
- Low friction design.
- Wide temperature range.

Versatile

- Suitable for various sensors/encoders: Absolute, fieldbus, incremental and analog.
- Variable mounting possibilities.
- Flexible connection options: Cable, connector, radial, axial.
- Scalable analog interface with limit switch function.

Dynamic

- Traverse speed of 0.8 m/s.
- 3 m measuring length.

Mechanical Characteristics (Draw Wire Mechanics):

Measuring range:	3,000 mm
Extension force:	Fmin 0.67 lbs (3.0 N)
Max. speed:	2.62 ft/s (0.8 m/s)
Working temperature:	-40 to +176 °F (-40 to +80 °C)
Repeat accuracy:	±0.15 mm
Linearity:	±0.35%
Weight:	approx. 1.10 lbs (500 g) (depending on the sensor/encoder used)
Materials:	housing: plastic/zinc die-cast wire: stainless steel Ø 0.9 mm, plastic coated
Protection (encoder only):	IP65

Operating Principle:

Construction:

The core of a draw wire device is a drum mounted on bearings, onto which a wire is wound. Winding takes place via a spring-loaded device.

Note:

Exceeding the maximum extension length of the draw wire will lead to damage to the wire and the mechanics.

We reserve the right to make technical alterations without prior notice.

Linear Position Technology

Draw Wire Mechanics with Encoder or Analog Sensor

Draw Wire Encoder DW108

-40 to +80 °C
Wide temperature range

High protection level

Shock/vibration resistant

Redundancy

Relay output

Switching output

Robust

- Measuring length up to 5 m.
- Different types of sensors (analog, incremental, CANopen, relay output, switch).
- Linearity up to $\pm 0.1\%$ of the measuring range.
- IP67 protection level and wide temperature range from -40 to +85 °C.

Versatile

- Integrated inclinometer.
- Redundant sensors.
- The suitable measuring length for every application.
- For even higher plant availability.

Advantages

- Cost, space and installation work saving.
- Simple selection and fast installation.
- High accuracy at economic prices.
- Reliability and long service life for outdoor applications.

Mechanical Characteristics (Draw Wire Mechanics):

Measuring range:	1.0 - 5.0 m	
Measuring wire:	material	304 stainless steel, nylon coated
	diameter	Ø 0.9 mm Ø 0.61 mm (ABZ incremental)
Wire fastening:	Eyelet	
	internal diameter	Ø 8 mm
	outer diameter	Ø 15 mm
	height	2 mm
Max. speed:	1 m/s	
Max. acceleration:	10 m/s ²	
Linearity (entire measuring range):	analog	$\pm 0.8\%$
	incremental (1 - 2 m)	$\pm 0.1\%$
	incremental (3 - 5 m)	$\pm 0.3\%$
	CANopen/relay	$\pm 0.5\%$
Repeat accuracy (entire measuring range):	analog	$\pm 0.3\%$
	incremental (1 - 2 m)	$\pm 0.1\%$
	incremental (3 - 5 m)	$\pm 0.15\%$
	CANopen/relay	$\pm 0.1\%$
Retraction force:	0.44 lbs (2 N)	
Extension force:	1.79 lbs (8 N)	
Drum circumference:	245 mm	
Housing:	poly carbonate reinforced with glass fibers	
Protection:	IP67	
Temperature range:	-40 to +185 °F (-40 to +85 °C)	
Weight:	1.1 lbs (0.5 kg)	
Stock resistance acc. to EN 60068-2-27:	30 g (300 m/s ²), 11 ms	
Vibration resistance acc. to EN 60068-2-6:	10 g (100 m/s ²), 10-500 Hz	

Operating Principle:

Construction:

The core of a draw wire device is a drum mounted on bearings, onto which a wire is wound. Winding takes place via a spring-loaded device.

Note:

Exceeding the maximum extension length of the draw wire will lead to damage to the wire and the mechanics.

Draw Wire Encoder DW108

Electrical Characteristics:

Power supply:	9-30 VDC 5 VDC \pm 10% (Analog only) 12-30 VDC (Analog only)
Electromagnetic compatibility:	acc. to EN 61326-1, EN 61326-3-1
RoHS compliant acc. to EU guideline 2011/65/EU	

Analog sensor:

Output signal:	analog
Resolution:	12 bit

Incremental output:

Output signal:	AB (Z optional)
Resolution:	512 / 1024 ppr
Current consumption (non load):	max. 100 mA
Output current:	max. 50 mA
Circuit:	TTL

CANopen:

Output signal:	CANopen (DS301)
Resolution:	14 bit
Resolution inclinometer:	0.1°
Accuracy inclinometer:	\pm 0.6°
Temperature drift inclinometer:	\pm 0.01% / °C

Relay output:

Output signal:	1x relay (Normally Open)
Maximum current:	50 mA
Hysteresis:	20 mm (factory setting)

Switch output:

Output signal:	switch
Maximum current:	0.5 A
Mechanical service life:	
without load	min. 1,000,000 switching operations (60 switching operations/ min.)
under load	min. 30,000 switching operations (30 switching operations/ min.)

Accessories:

- See page H1, Connectivity, for cables and connectors

Draw Wire Encoder DW108

Technology in Detail

CANopen with inclinometer:

Setting possibility 360°	Setting possibility ±180°
 <p>0° ... 360°</p>	 <p>±180°</p>
angle: 0-360°	angle: ±180°

Redundant signals possible.

Setting possibilities:

- Switching between setting possibilities 180° and 360°.
- Switching between synchronous and asynchronous output.
- Change of direction of rotation (cw/ccw).
- Setting and resetting an offset.

Linear Position Technology

Draw Wire Mechanics with Encoder or Analog Sensor

Draw Wire Encoder DW108

Dimensions: DW108 with Analog Sensor

Draw Wire Encoder DW124

-40 to +80 °C
Wide temperature range

High protection level

Shock/vibration resistant

Redundancy

Robust

- Measuring length 6-10 m.
- Different types of sensors (analog, CANopen).
- Linearity up to $\pm 0.5\%$ of the measuring range.
- IP67 protection level and wide temperature range from -40 to +85 °C.

Versatile

- Integrated inclinometer.
- Redundant sensors.
- The suitable measuring length for every application.
- For even higher plant availability.

Advantages

- Cost, space and installation work saving.
- Simple selection and fast installation.
- High accuracy at economic prices.
- Reliability and long service life for outdoor applications.

Mechanical Characteristics (Draw Wire Mechanics):

Measuring range:	6 - 10 m	
Measuring wire:	material	304 stainless steel, nylon coated
	diameter	0.9 mm
Wire fastening:	Eyelet	
	internal diameter	Ø 8 mm
	outer diameter	Ø 15 mm
	height	2 mm
Max. speed:	1 m/s	
Max. acceleration:	10 m/s ²	
Linearity (entire measuring range):	analog	$\pm 1.0\%$
	CANopen	$\pm 0.5\%$
Repeat accuracy (entire measuring range):	analog	$\pm 0.5\%$
	CANopen	$\pm 0.2\%$
Retraction force:	1.01 lbs (4.5 N)	
Extension force:	2.02 lbs (9 N)	
Housing:	poly carbonate reinforced with glass fibers	
Protection:	IP67	
Temperature range:	-40 to +185 °F (-40 to +85 °C)	
Weight:	approx. 2.13 lbs (0.97 kg)	
Stock resistance acc. to EN 60068-2-27:	30 g (300 m/s ²), 11 ms	
Vibration resistance acc. to EN 60068-2-6:	10 g (100 m/s ²), 10-500 Hz	

Operating Principle:

Construction:

The core of a draw wire device is a drum mounted on bearings, onto which a wire is wound. Winding takes place via a spring-loaded device.

Note:

Exceeding the maximum extension length of the draw wire will lead to damage to the wire and the mechanics.

Linear Position Technology

Draw Wire Mechanics with Encoder or Analog Sensor

Draw Wire Encoder DW124

Electrical Characteristics:

Power supply:	9-30 VDC 5 V DC $\pm 10\%$ (Analog Only) 12-30 VDC (Analog Only)
Electromagnetic compatibility:	acc. to EN 61326-1, EN 61326-3-1
RoHS compliant acc. to EU guideline 2011/65/EU	

Analog sensor:

Output signal:	analog
Resolution:	12 bit

CANopen:

Output signal:	CANopen (DS301)
Resolution:	14 bit
Resolution inclinometer:	0.1°
Accuracy inclinometer:	$\pm 0.6^\circ$
Temperature drift inclinometer:	$\pm 0.01\% / ^\circ\text{C}$

Standard Wiring (Analog Output):

Connection Type	+V	N/C	Common (0V)	Out 1	Out 2
Pin	1	2	3	4	5

Standard Wiring (CANopen Output):

Connection Type	Common (0V)	+V	CAN GND	CAN High	Can Low
Pin	3	2	1	4	5

Linear Position Technology

Linear Position Technology

Draw Wire Mechanics with Encoder or Analog Sensor

Standard Draw Wire Encoder DW125

Description

- Direct length measurement.
- High repeatability.

Versatile

- Easy assembly.
- No additional guidance system.
- Wire guidance possible using guide pulleys.
- Multiple encoder outputs available.

Compact

- Measuring lengths up to 6,000 mm.

Mechanical Characteristics of the Draw-Wire Encoder:

Measuring range:	up to 6,000 mm
Repeatability:	±0.15 mm
Extension force:	1.79 lbs (8 N)
Travel speed:	max. 9.84 ft/s (3,000 mm/s)
Required pull on spring:	min. 1.12 lbs (5 N) (on wire)
Drum circumference:	200 mm
Wire diameter:	parawire nylon 2.8 m: 1.05 mm, steel wire 6 m: 0.54 mm
Weight:	approx. 2.32 lbs (700 g)

Note:

If the maximum extension length is exceeded, the wire and transducer will be damaged.

We reserve the right to make technical alterations without prior notice.

Mini Measurement System Type WE-1

High rotational speed

Magnetic field proof

Short-circuit proof

Rugged

- Wide temperature range -4 to +185 °F (-20 to +85 °C).
- Robust strain relief on cable outlet thanks to multiple clamping.

Versatile

- Low power consumption despite high scanning rate.
- Broad input voltage range (8-30 V).
- Fix, connect, ready to go.

Compact

- 74 x 50 x 52 mm.
- Easy to install, one unit.

Mechanical Characteristics:

Measuring wheel circumference:	100 mm
Resolution:	Up to 0.1 mm
Radial cable outlet:	2 m PVC cable
Speed max.:	2000 RPM
Protection:	IP64

Electrical Characteristics:

Output circuit [Key Code]:	Push-pull [2A] (7272)
Supply voltage:	8-30 VDC
Power consumption (no load):	≤ 20 mA
Permissible load/channel:	20 mA
Pulse frequency:	≥ 100 kHz

Standard Wiring:

Connection Type	Case Ground	Common (0V)	+V	A	\bar{A}	B	\bar{B}	Z	\bar{Z}
Cable	Shield/Drain	WH	BN	GN	YE	GY	PK	BU	RD

Angular Position Technology

Angular Position Technology

Inclinometers

WHAT IS AN INCLINOMETER?

Inclinometers measure angular tilt in reference to gravity. Turck inclinometers contain a MEMS (Micro-Electro-Mechanical System) device that incorporates a microelectromechanical capacitive element into the sensor that utilizes two parallel plate electrodes, one stationary and one attached to a spring-mass system. The suspended electrode is free to move with the change in angle relative to earth's gravity. This results in a measurable change in the capacitance between the two plates that is proportional to the angle of deflection. These signals are conditioned to provide voltage outputs (0.1 to 4.9 VDC) or current outputs (4 to 20 mA).

The microprocessor design and the MEMS technology allows for a compact, precise inclinometer in a very robust, industrialized package. The inclinometer carries an IP68 rating for ingress protection, and can operate in temperatures from -30 °C to +70 °C (-22 °F to +158 °F), with the option for -40 °C (-40 °F). These sensors can be mounted up to a maximum of ±85° angle for dual axis models and 360° for single axis models.

WHERE CAN I USE AN INCLINOMETER?

Inclinometer sensors may be used in a wide variety of applications to solve unique feedback requirements where the customer needs to level platforms or control tilt angle.

The device's small size lends itself to a multitude of applications, such as:

- Commercial machines: diggers, cranes, rotary tables, bulldozers, road construction machinery
- Dancer arm position for web tension control
- Solar plants: mirror and cell positioning
- Machine control: levers, pedals, flaps, mixing machines, hydraulic jacks
- Vertical and horizontal drills used in tunnel and road construction and immersion equipment
- Offshore plants: platforms, cranes
- HVAC louvers, flood control gates, telescopes
- Conveyors, utility vehicles, agricultural and forestry machinery, cranes and hoisting technology – and more

Inclinometers

Why Choose Turck Inclinometers?

High Accuracy and Repeatability

- $\leq 0.1\%$ repeatable, after a warm-up time of 0.5 hours, ensures consistent outputs.
- Resolution as fine as $\leq 0.04^\circ$ for Dual Axis analog family.
- Resolution as fine as $< 0.01^\circ$ for CANopen Single Axis family.
- Temperature compensated down to -40°C (-40°F) and up to $+70^\circ\text{C}$ ($+158^\circ\text{F}$) on select versions. Temperature coefficients as low as $0.01^\circ/\text{K}$ for analog models or $0.008^\circ/\text{K}$ for CANopen models.

Expanded Line

- Dual axis with analog voltage or current outputs measuring up to -85 to $+85^\circ$.
- Single axis with analog voltage or current outputs measuring from 1 to 360° of travel.
- 360° Single axis with configurable dual PNP set points.
- CANopen interface now available in single axis or dual axis that can be used in a wide variety of industrial and mobile applications.
- Factory default measuring ranges.
- Non-standard measuring ranges available upon request. Contact factory for availability and specifications.
- Prewired connections potted in cable and value add connectivity is available on request. Contact factory for availability and specifications.

Rugged, Reliable and Compact

- Rated to 55 Hz (1 mm) vibration and 30 g (11 ms) shock for a wide variety of applications.
- Q20L60 analog and set point versions measure 20 mm x 30 mm x 60 mm, making them the most compact IP68/IP69K rated inclinometer on the market.
- Q42 CANopen inclinometer housing measures 42 mm x 42.5 mm x 68 mm, and incorporates bus-in and bus-out M12 Eurofast® connectors for ease of use.
- IP68 rated according to Turck's stringent test protocol:
 - » 24 hours continuous storage at 70°C (158°F)
 - » 24 hours continuous storage at -25°C (-13°F)
 - » 7 days submerged at a depth of 1 meter
 - » 10 thermal shock changes from -25 to $+70^\circ\text{C}$ (-13 to $+158^\circ\text{F}$), 1 hour dwell cycle

Easy to Use

- Zero point offset on the Dual Axis Analog inclinometers can be field adjusted by applying a signal to the teach input pin or by using an optional teach pendant.
- Span of the Single Axis Analog inclinometers can be easily scaled by using the teach input pin to set the span in the field.
- Discrete outputs of the Single Axis Digital inclinometer can be independently set by using the teach input pin or by using an optional teach pendant.
- CANopen inclinometers come with CiA DS-301, profile CiA DSP-410 for ease of configuration.

Angular Position Technology

Inclinometers

Dual Axis with Analog Output

Turck's standard product is a low profile dual axis (X and Y) inclinometer with standard angular ranges of $\pm 10^\circ$, $\pm 45^\circ$, $\pm 60^\circ$ and $\pm 85^\circ$, with additional ranges optional. Each axis has independent outputs. The 5 VDC version is a ratiometric design and the power is limited between 4.75 and 5.25 VDC. This means that the output is proportional to the supply voltage. The 10-30 VDC supply units are regulated and the output is fixed regardless.

- $\pm 10^\circ$, $\pm 45^\circ$, $\pm 60^\circ$, $\pm 85^\circ$
- Current 4-20 mA, 10-30 VDC
- Voltage output 0.1-4.9 V, 10-30 VDC
- Voltage output 0.1-4.9 V @ 5 VDC
- Teachable zero point up to $\pm 15\%$ with teach adapter VB2-SP4
- FM Class I, Div 2 approved when used with Guard-Q20L60 and approved cordset.

Technical Specifications – Q20L60:

Voltage:	10-30 VDC / Ratiometric: 4.75-5.25 VDC
Protection:	IP68
Operating temperature:	-30 to +70 °C (-22 to +158 °F)
/S97 Option:	-40 to +70 °C (-40 to +158 °F)
Housing:	Polycarbonate
Shock resistance:	30 g (11 ms)
Vibration:	55 Hz (1 mm)
Repeatability:	$\leq 0.2\%$ of measuring range [A-B] $\leq 0.1\%$ after warm-up time of 0.5 h

Technical Specifications – Q42:

Voltage:	10-30 VDC
Protection:	IP68
Operating temperature:	-40 to +70 °C (-40 to +158 °F)
Housing:	PA12
Shock resistance:	30 g (11 ms)
Vibration:	55 Hz (1 mm)
Max. linear deviation:	$\pm 0.2^\circ$ (10° or 360°) / $\pm 0.3^\circ$ (45°) / $\pm 0.4^\circ$ (60°)
Baud rate:	10 kBit/s to 1 MBit/s
Interface:	CANopen

Inclinometers

Single Axis 360° with Analog Output

When a larger range is required or only one axis is necessary, the single axis 360° inclinometer has an adjustable measuring range and allows for programming a specified span within the 360°. The teach function is simple and can be done in seconds. In addition, this version comes with two outputs in one device. The first output increases with clockwise rotation (CW). The second output increases with counter-clockwise rotation (CCW).

- Measuring range is adjustable via teach adapter VB2-SP4
- Current 4-20 mA output
- Voltage 0.1-4.9 V output
- Vertical mount only
- Factory default is 1° to 360°
- FM Class I, Div 2 approved when used with Guard-Q20L60 and approved cordset.

Single Axis 360° with Two Discrete Switchpoints

This version has dual discrete outputs that are programmable as either normally open or normally closed with an adjustable span within the full angular range 0° to 360°.

- Two switchpoints (PNP, N.O. or N.C.), hysteresis, and span are all adjustable with teach adapter VB2-SP5
- Switch state indication by LEDs

Single and Dual Axis with CANopen Interface

A standard CANopen interface according to CiA DS-301/CiA DSP-410. All measured values and parameters are accessible via the object directory (OD).

- Transmit data object (TPDO1) with four operating modes
- Service-data object (Standard-SDO)
- Error message via emergency object
- Monitoring functions Heartbeat as well as Nodeguarding/Lifeguarding
- Memory and recovery function of all parameters
- Indication of status and error via two-color LED
- Setting of node ID as well as baud rate via object dictionary
- Freely configurable limit frequency (digital filter)
- Configuration of the minimal change of angle for TPDO1 send event
- Optional monitoring of internal device temperature

We reserve the right to make technical alterations without prior notice.

Rotary Position Technology – Inductive

Rotary Inductive Sensors

What is a rotary inductive sensor?

Turck's rotary inductive analog sensor operation is based on the RLC (Resistance Inductive Capacitance) principle and incorporates an advanced microprocessor and precisely positioned emitter and receiver coils on a printed circuit board.

The emitter coils are excited with a high frequency AC field. The interaction between the moving position element and the receiver coils creates different voltages that are induced into the receiver coils which determines the position of the target.

The tuned positioning element can be mounted in a number of ways, but because it is contactless, there is no wear to the sensor or to the positioning element. Irregular rotating shafts can cause vibration and offset of the positioning element. Because of the contactless arrangement of the sensor and positioning element, there is a $\leq 3\text{mm}$ compensation of lateral offset. The absence of a shaft and bearing enables easy adaptation to many applications.

Where can I use a rotary inductive sensor?

The rotary inductive sensor can be used in a variety of applications and industries.

- Mobile equipment: Detection of the boom angle, platform rotation and ladder position.
- Solar panel tracking and wind turbine blade pitch.
- Commercial: Gate or door position on trains and buses.

Why choose Turck rotary inductive sensors?

High noise immunity

As a result of the RLC circuit. All products meet IEC 60529 and EN 60529 standard for noise immunity. The sensor is also inherently weld field immune.

High linearity and precision

The new rotary inductive sensors provide high precision measurement and a repeatability of 0.09° with a measuring range of 360° . Bearing tolerances are eliminated through the contactless design as well as vibration caused by irregular rotating shafts, guaranteeing high linearity.

Robust housing

Made of high quality plastic. The IP67 rated sensor protects the sensor from most chemicals and oils. It is also shock and vibration resistant up to 30 g (11 ms) and 55 Hz (1 mm displacement).

Analog or digital outputs

The standard units feature analog outputs 0-10 V and 4-20 mA with operating voltage of 15-30 VDC or 0.5-4.5 V with operating voltage of 8-30 VDC. All standard units have 12 bit resolution. Operating temperatures available are -25 to $+70^\circ\text{C}$ or -40 to $+70^\circ\text{C}$. Enhanced units feature SSI output with operating voltage of 15-30 VDC and 16 bit resolution. Versions with incremental outputs can be used in place of optical encoders in counting applications.

Rotary Inductive Sensors – Accessories, QR20/QR14

Positioning Element

P1-Ri-QR20

Positioning element, operating at a distance of 0-5 mm to the sensor surface. Nominal distance is 1 mm.

Positioning Element

P2-Ri-QR20

Positioning element, operating at a distance of 0-5 mm to the sensor surface. Nominal distance is 1 mm.

Positioning Element

P1-Ri-QR14

Positioning element, operating at a distance of 0-5 mm to the sensor surface. Nominal distance is 1.5 mm.

Positioning Element

P2-Ri-QR14

Positioning element, operating at a distance of 0-5 mm to the sensor surface. Nominal distance is 1.5 mm.

Spacer Sleeve

DS-Ri-QR14

Alignment marks for zero position

Offset spacers for face down mounting

Spacer sleeve for overhead mounting

¹⁾ Programmable to other outputs: 0-5 V or 0.5-4.5 V

²⁾ Programmable to 0-20 mA

Technical Specifications:

Measuring Principle:	inductive, absolute singleturn
Nominal distance:	1.5 mm
Repeat accuracy:	≤0.01% of full scale
Linearity deviation:	≤ 0.05% of full scale
Temperature drift:	≤ ±0.004% / K
Residual ripple:	≤ 10% U _{ss}
Isolation test voltage:	≤ 0.5 kV
Short-circuit protection:	yes
Wire-break/Rev. pol. protection:	yes/yes (supply voltage)
Load resistance (voltage):	≥ 4.7 kΩ
Load resistance (current):	≤ 0.4 kΩ
Sampling rate:	5000 Hz
Current consumption:	< 50 mA

Housing:	QR24
Dimensions:	81 x 78 x 24 mm
Housing material (QR24):	metal/plastic, ZnAlCu1/PBT-GF30-V0
Housing material (EQR24):	stainless steel/plastic V4A (1.4404) PA12-GF30
Shaft type:	hollow shaft
Electrical connection:	M12 x 1
Vibration resistance:	55 Hz (1 mm)
Vibration resistance (EN 60068-2-6):	20 g, 10-3000 Hz, 50 cycles, 3 axes
Shock resistance (EN 60068-2-27):	100 g, 11 ms 1/2 sine, 3x each, 3 axes
Continuous Shock resistance (EN60068-2-29):	40 g, 6 ms 1/2 sine, 4000x each, 3 axes
Degree of protection:	IP68/IP69K
Power-on indication:	LED, green
Measuring range indication:	LED, yellow, yellow flashing

Incremental Encoders

Rotary Position Technology

Incremental Encoders

Miniature Type RI-01 (Shaft) / RI-02 (Blind Hollow Shaft)

High rotational speed

Temperature
-20 to 85 °C

Magnetic field proof

Short-circuit protected

Reverse polarity protection

Rugged

- Wide temperature range
-4 to +185 °F
(-20 to +85 °C)
- Robust strain relief on cable outlet
- Highly flexible cable withstands constant flexing from 32 to 158 °F (0 to 70 °C)
- Very high EMC standard
Turck encoder type RI-01, RI-02 meet German Railways standard EN 50121

Versatile

- Low power consumption despite high scanning rate
- Short-circuit proof
- Temperature compensation
- Broad input voltage range (5-24 V or 8-30 V)
- Shaft and hollow shaft up to 1024 ppr

Compact

- **Can be used where space is tight**
Overall diameter of only 24 mm
Shaft diameter min. 4 mm

Mechanical Characteristics:

Speed:	max. 12,000 RPM
Rotor moment of inertia:	approx. 5.5 x 10 ⁻³ oz-in ² (0.1 x 10 ⁻⁶ kgm ²)
Starting torque:	< 1.4 oz-in (< 0.01 Nm)
Radial load capacity of shaft:	2.25 lbs (10 N)
Axial load capacity of shaft:	4.5 lbs (20 N)
Weight:	approx 0.14 lbs (0.06 kg)
Protection acc. to EN 60529:	IP65 housing side, IP50 shaft side (IP64 on request)
Working temperature:	-4 to 185 °F (-20 to +85 °C)
Materials:	Shaft: stainless steel Blind hollow shaft: brass
Shock resistance acc. to EN 60068-2-27:	100 g (1,000 m/s ²), 6 ms
Vibration resistance acc. to EN 60068-2-6:	10 g (100 m/s ²), 55-2,000 Hz

Electrical Characteristics:

Output circuit [Key Code]:	Push-Pull [1D/2D] (7272 compatible) ³⁾	Push-Pull [1A/2A] (7272 compatible) ³⁾
Supply voltage:	5-24 VDC ⁵⁾	8-30 VDC
Power consumption (no load):	max. 50 mA	max. 50 mA
Permissible load/channel:	max. 50 mA	max. 50 mA
Pulse frequency:	max. 160 kHz	max. 160 kHz
Signal level high:	min. +V -2.5 V	min. +V -3 V
Signal level low:	max. 0.5 V	max. 0.5 V
Rise time t _r :	max. 1 μs	max. 1 μs
Fall time t _f :	max. 1 μs	max. 1 μs
Short-circuit protected ¹⁾ :	yes ²⁾⁴⁾	yes ²⁾⁴⁾
UL approval:	file E356899	

RoHS compliant acc. to EU guideline 2011/65/EU

¹⁾ If supply voltage correctly applied

²⁾ Only one channel allowed to be shorted-out:
(If +V=5 V, short-circuit to channel, 0 V, or +V is permitted.)
(If +V=5-30 V, short-circuit to channel or 0 V is permitted.)

³⁾ Max. recommended cable length 30 m

⁴⁾ Approximately one minute

⁵⁾ With 24 VDC there is no tolerance above 24 VDC.
Please use output circuit 8-30 VDC.

Miniature Type RI-01 (Shaft) / RI-02 (Blind Hollow Shaft)

- See page G1, Accessories, for mounting attachments and couplings

Rotary Position Technology

Incremental Encoders

Miniature Type RI-01 (Shaft) / RI-02 (Blind Hollow Shaft)

Dimensions: RI-01 Shaft Version

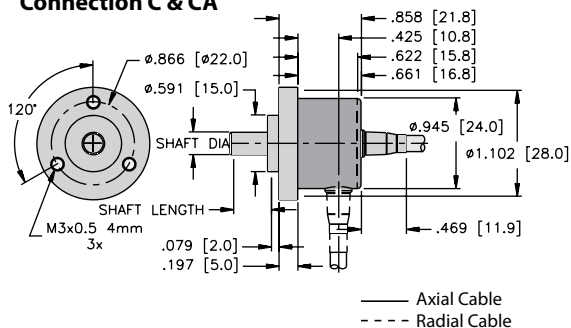

RI-01 Flange F1 Connection C & CA

RI-01 Flange F2 Connection C & CA

RI-01 Flange F3 Connection C & CA

Mounting Advice:

The flanges and shafts of the encoder and drive should not be rigidly coupled together at the same time. We recommend the use of suitable couplings (see page G1, Accessories).

Dimensions: RI-02 Blind Hollow Shaft Version

RI-02 Flange S3 Connection C & CA

Accepts 3 mm torque pin N.615.683 included with encoder.

Secured with hub set screws:
(4) M3 screws at 90°, 4 mm long

Mounting Advice:

The flanges and shafts of the encoder and drive should not both be rigidly coupled together at the same time. A cylindrical pin (RA-TP-3-S per ISO 2338-A-3m6 x 10), for use as a torque stop, is supplied.

We reserve the right to make technical alterations without prior notice.

Compact Type RI-04 (Shaft) / RI-05 (Hollow Shaft)

Rugged

- Chromated housing resistant to cooling lubricants and other environmental influences
- IP65 from housing side
- Robust strain relief on cable outlet.
- Highly flexible cable (withstands constant flexing at 32 to 158 °F (0 to 70 °C))
- Short-circuit proof
- Wide temperature range -4 to +185 °F (-20 to +85 °C)
- Temperature and aging compensation

Compact

- **Can be used where space is tight**
Overall diameter of only 36.5 mm
Shaft diameter min. 4 mm

Versatile

- Hollow shaft version: Fits directly onto drive shaft - no couplings needed - saves up to 30% on cost and 60% on installation space and time
- Universal application in mechanical engineering, vehicles, conveyors and elevators
- Low current consumption despite high scanning rate
- Broad input voltage range (5-18 V or 8-30 V)

We reserve the right to make technical alterations without prior notice.

Incremental Encoders

Mechanical Characteristics:

Speed:	Shaft version: max. 12,000 RPM Hollow shaft version: max. 6,000 RPM	Working temperature:	-4 to +185 °F (-20 to +85 °C)
Rotor moment of inertia:	approx. 1.1 x 10 ⁻² oz-in ² (0.2 x 10 ⁻⁶ kgm ²)	Materials:	Shaft: stainless steel; Hollow shaft: brass Housing: chromated Aluminium Cable: PVC
Starting torque:	< 7 oz-in (< 0.05 Nm)	Shock resistance acc. to EN 60068-2-27:	approx. 100 g (1,000 m/s ²), 6 ms
Radial load capacity of the shaft:	9 lbs (40 N)	Vibration resistance acc. to EN 60068-2-6:	approx. 10 g (100 m/s ²), 55-2,000 Hz
Axial load capacity of the shaft:	4.5 lbs (20 N)		
Weight:	approx. 0.175 lbs (0.08 kg)		
Protection acc. to EN 60 529:	IP65, housing side, IP50 shaft side (IP64 on request)		

Electrical Characteristics:

Output circuit [Key Code]:	Push-Pull [2I] (7272 compatible) ²⁾	Push-Pull [1H/2H] (7272 compatible) ²⁾	RS422 [4A/4D]

Incremental Encoders

Rotary Position Technology

Incremental Encoders

Economy Type RI-08 (Shaft) / RI-09 (Hollow Shaft)

High rotational speed

Temperature
-20 to 70 °C

Shock/vibration resistant

Magnetic field proof

Short-circuit protected

Reverse polarity protection

Optical sensor

Rugged

- Temperature and aging compensation
- Short-circuit protected outputs
- Flange and cover made from a new High-Tech-Material (composite material)
- High component integration leads to low profile design, high performance and economical pricing
- Cable outlet guarantees 10x higher strain relief than traditional cabling methods and ensures IP67 protection

Versatile

- Hollow shaft version: Fits directly onto drive shaft - no couplings needed - saves up to 30% on cost and 60% on installation space and time
- 1 1/2" (37 mm) diameter housing suitable for replacing resolvers

Compact

- Compact size only Ø 37 x 33 mm

Mechanical Characteristics:

Speed:	max. 6,000 RPM
Rotor moment of inertia:	Shaft version: approx. 2.2 x 10 ⁻² oz-in ² (0.4 x 10 ⁻⁶ kgm ²)
	Hollow shaft version: approx. 7.7 x 10 ⁻² oz-in ² (1.4 x 10 ⁻⁶ kgm ²)
	Starting torque:
Radial load capacity of the shaft:	4.5 lbs (20 N)
Axial load capacity of the shaft:	2.25 lbs (10 N)
Weight:	approx. 0.22 lbs (0.1 kg)
Protection acc. to EN 60 529:	IP65 housing (IP67 on request)

Working temperature:	-4 to 158 °F (-20 up to +70 °C) ¹⁾
Materials:	Shaft/hollow shaft: stainless steel; housing, flange: composite PPA, 40% CF (carbon fiber); cable: PVC
Shock resistance acc. to EN 60068-2-27:	approx. 100 g (1,000 m/s ²), 6 ms
Vibration resistance acc. to EN 60068-2-6:	approx. 10 g (100 m/s ²), 10-2,000 Hz

¹⁾ For versions with push-pull output and supply voltage >15 VDC: max. 131 °F (55 °C)

Electrical Characteristics:

Output circuit [Key Code]:	RS422 [4A] (TTL compatible)	Push-Pull [2F] (7272 compatible) ³⁾	Push-Pull [2J] (7272 compatible) ³⁾
Supply voltage:	5 V (±5%)	5-30 VDC	10-30 VDC

Incremental Type RI-10 (Shaft) / RI-12 (Hollow Shaft)

Versatile

- **The right connection for every application:** Cable, M12 connector, M23 connector, and Mil-Spec Connectors.
- **Wide variety of standard industrial mounting options:** Servo, square, clamping flanges.
- **Standardized designs for worldwide use:** Compatible with US and European standards; 5-30 V supplies; Various output options; Up to 5,000 ppr.

Compact

- **Small footprint:**
Outer diameter 2" x 2"
Can utilize 2" or 2.5" flanges.

Rugged and Tough

- **High tolerance to vibration, shock and alignment issues:**
Sturdy double bearing lock design.
- **Environmentally protected design:**
Die-cast housings; butyl rubber shaft seals and O-rings; robust stainless steel hubs, flanges, and disc tables. Ratings up to IP67.
- **Wide temperature range:**
-40 to +185 °F (-40 to +85 °C)
- Also available in seawater resistant version, certified acc. to salt-spray test IEC 68-2-11 ≥ 672 hours

* Length in meters.

Incremental Type RI-10 (Shaft) / RI-12 (Hollow Shaft) Accessories - Inserts

Isolation/Adapter Inserts for Hollow Shaft Encoders

Thermal and Electrical Isolation of the Encoders:

Isolation inserts prevent currents from passing through the encoder bearings. These currents can occur when using inverter controlled three-phase or AC vector motors and considerably shorten the service life of the encoder bearings. In addition, the encoder is thermally isolated as the plastic does not transfer the heat to the encoder.

Tip:

By using these adapter inserts, you can achieve six different hollow shaft diameters, all on the basis of one 15 mm encoder.

Dimensions:

Isolation Insert	D1 [mm]	D1 [in]
RSA-6-12	6	
RSA-A0-12	6.35	(1/4)
RSA-10-12	10	
RSA-A1-12	9.53	(3/8)
RSA-12-12	12	
RSA-A3-12	12.7	(1/2)

Note: Use with 15 mm bore size hollow shaft RI-12 encoder.

Incremental Type RI-60 (Shaft) / RI-61 (Hollow Shaft), SinCos

Versatile

- With incremental SinCos tracks.
- Shaft and hollow shaft versions.
- Cable and connector variants.

Rugged

- Suited for motor feedback applications.
- Very high signal quality.
- Various mounting options available.

Compact

- Can be used even where space is tight: outer diameter 58 mm

Mechanical Characteristics:

Max speed:	IP65	12000 rpm, 5000 rpm (continuous)
	IP67	8000 rpm, 2000 rpm (continuous)
Starting torque at 68 °F (20 °C):	IP65	<1.4 oz-in (<0.01 Nm)
	IP67	<7 oz-in (<0.05 Nm)
Mass moment of inertia:	shaft	0.21 oz-in ² (4.0 x 10 ⁻⁶ kgm ²)
	hollow shaft	0.38 oz-in ² (7.0 x 10 ⁻⁶ kgm ²)
Load capacity of shaft:	radial	18 lbs (80 N)
	axial	9 lbs (40 N)
Weight:		approx. 1 lbs (0.45 kg)
Protection:		IP65
Working temperature range:		-40 to +194 °F (-40 to +90 °C) ¹⁾
Materials:	shaft/hollow shaft	stainless steel
	flange	aluminum
	housing	zinc die-cast
	cable	PVC
Shock resistance acc. to EN60068-2-27:		250 g (2500 m/s ²), 6 ms
Vibration resistance acc. to EN60068-2-6:		10 g (100 m/s ²), 55-200 Hz

¹⁾ Cable version -22 to +194 °F (-30 to +90 °C), fixed installation

We reserve the right to make technical alterations without prior notice.

Incremental Encoders

Rotary Position Technology

Incremental Encoders

Incremental Type RI-60 (Shaft) / RI-61 (Hollow Shaft), SinCos

Electrical characteristics:

Power supply:	5 VDC (±5%) or 10-30 VDC	
Current consumption (no load):	5 VDC	70 mA max.
	10-30 VDC	45 mA max.
Reverse polarity protection:	yes	
RoHS compliant acc. to guideline 2011/65/EU		

SinCos interface:

Max. frequency -3dB:	400 kHz
Signal level:	1 Vpp (±10%)
Short circuit protected:	yes ²⁾
Pulse rate:	1024/2048 ppr

²⁾ Short circuit to 0V or to output, one channel at a time, power supply correctly applied

Incremental Type RI-65 (Shaft) / RI-96 (Hollow Shaft), Stainless Steel

Versatile

- **Reliable mounting in a wide variety of installation situations:** Comprehensive and proven mounting options.
- **Standard encoder for use worldwide:** compatible with II US and European standards, supply voltage 5-30 VDC, various interface options, max. 5000 ppr.

Rugged

- Stays sealed even when subjected to harsh everyday use:
 - IP67 Protection
 - Rugged stainless-steel housing
 - Viton seals
 - High security against failures in the field, ideal for use in outdoor applications
- **Can be used in a wide temperature range:** -40 to +185 °F (-40 to +85 °C)
- **Increased ability to withstand vibration and installation errors:** Eliminates machine downtime and repairs. Sturdy double bearing lock design.

Compact

- **Can be used even where space is tight:** outer diameter 50 mm, installation depth max. 47 mm.

Mechanical Characteristics:

Speed ¹⁾ :	max. 6,000 RPM	Working temperature:	-40 to +185 °F (-40 to +85 °C)
Rotor moment of inertia:	approx. 0.098 oz-in ² (1.8 x 10 ⁻⁶ kgm ²)	Materials:	Housing, flange, Shaft: 1.4305 (303) stainless steel Connector: stainless steel Seals: viton
Starting torque:	< 7 oz-in (< 0.05 Nm)	Shock resistance acc. to EN 60068-2-27:	250 g (2,500 m/s ²), 6 ms
Weight:	approx. 0.9 lbs (0.4 kg)	Vibration resistance to EN 60068-2-6:	10 g (100 m/s ²), 10-2,000 Hz
Radial load capacity of the shaft:	18 lbs (80 N)		
Axial load capacity of the shaft:	9 lbs (40 N)		
Protection acc. to EN 60 529 with shaft sealing:	IP66/IP67		

¹⁾ For continuous operation 3,000 RPM

Electrical Characteristics:

Output circuit [Key Code]:	RS 422 [4A] (TTL compatible)	Push-Pull [2B]	Push-Pull [2F] (7272 compatible)
Supply voltage:	5 V ±5%	10-30 VDC	5-30 VDC

Rotary Position Technology

Incremental Encoders

Incremental Type RI-16 (Shaft) / RI-64 (Hollow Shaft), High Resolution

Dimensions: RI-16 Shaft Version

RI-16 Flange C Connection 12M23 & 12M23A

RI-16 Flange S Connection C1M & CA1M

Mounting advice:

The flanges and shafts of the encoder and drive should not be rigidly coupled together at the same time. We recommend the use of suitable couplings (see page G1, Accessories).

We reserve the right to make technical alterations without prior notice.

Incremental Type RI-16 (Shaft) / RI-64 (Hollow Shaft), High Resolution

Dimensions: RI-64 Hollow Shaft Version

RI-64 Flange T Connection C

RI-64 Flange E1 Connection 12M23

Mounting advice:

The flanges and shafts of the encoder and drive should not be rigidly coupled together at the same time. We recommend the use of suitable couplings (see page G1, Accessories).

We reserve the right to make technical alterations without prior notice.

Reverse polarity
protection

High rotational
speed

Rugged

- Balanced, stainless-steel clamping rings, special bearing-shaft connection increases stability and vibration resistance.
- Optional plastic isolating inserts protect against damage from shaft currents.
- New type of mechanical construction, ideal for handling tough mechanical stresses and strains.

Versatile

- Very compact. Optional isolating inserts protect against damage from shaft currents, e.g. with AC vector motors.
- Only 49 mm clearance needed.
- Hollow shaft diameter up to Ø 42 mm.
- RS422, push-pull or SIN/COS outputs.
- Extended speed range up to 6,000 RPM.
- High-quality construction, balanced, stainless steel ensures quiet vibration-free running.

Economical

- Alternative to traditional heavy duty encoders that are often over-engineered and expensive.

Mechanical Characteristics:

Speed:	max. 6,000 RPM at 158 °F (70 °C) ¹⁾ max. 3,500 RPM at 176 °F (80 °C) ¹⁾
Rotor moment of inertia:	< 12 oz-in ² (< 220 x 10 ⁻⁶ kgm ²) ²⁾
Starting torque with sealing:	< 28.3 oz-in (< 0.2 Nm)
Weight:	approx. 1.8 lbs (0.8 kg)
Protection acc. to EN 60 529:	IP65
Working temperature:	-40 to +176 °F (-40 to +80 °C) ³⁾
Materials:	
Housing:	die-cast aluminium
Flange:	aluminium
Shaft:	stainless steel
Shock resistance acc. to DIN-IEC 68-2-27	200 g (2,000 m/s ²), 6 ms
Vibration resistance acc. to DIN-IEC 68-2-6:	10 g (100 m/s ²), 10-2,000 Hz

¹⁾ During the run-in-phase of approx. 2 hours, reduce the limits for working temperature max or speed max by 1/3

²⁾ Dependent on the shaft diameter

³⁾ With connectors, -40 °C, cable securely installed; -30 °C, cable flexibly installed; -20 °C

Electrical Characteristics Sine Wave Output:

Output circuit [Key Code]:	SinCos [AB] U = 1 V _{pp} (±20%)	SinCos [AA] U = 1 V _{pp} (±20%)
Supply voltage:	5 VDC (±5%)	10-30 VDC
Current consumption (no load) with inverted signal:	typ. 65 mA / max. 110 mA	typ. 65 mA / max. 110 mA
-3 dB frequency:	< 180 kHz	< 180 kHz
Signal level channels A/B:	1 V _{pp} (±20%)	1 V _{pp} (±20%)
Signal level channel 0:	0.1-1.2 V	0.1-1.2 V
Short-circuit protected ¹⁾	yes	yes
Reverse polarity protection:	no	yes
UL approval:	file E356899	

RoHS compliant acc. to EU guideline 2011/65/EU

¹⁾If supply voltage correctly applied

We reserve the right to make technical alterations without prior notice.

Large Bore Type RI-43 (Hollow Shaft)

Electrical Characteristics RS422 or Push-Pull Output:

Output circuit [Key Code]:	RS 422 [4A/4B/4C] (TTL compatible)	Push-Pull [1B/2B/2E]	Push-Pull [2F] (7272 compatible) ³⁾
Supply voltage:	5 VDC (+/-5%) 5-30 VDC 10-30 VDC	5-30 VDC 10-30 VDC	5-30 VDC

Rotary Position Technology

Incremental Encoders

Large Bore Type RI-43 (Hollow Shaft)

Mating Shaft Requirements:

Type of Flange	Axial End Play	Radial Runout	Angular Offset
S5 (anti-rotational spring short)	max. ± 1 mm	max. ± 0.3 mm	max. $\pm 2^\circ$
S4 (anti-rotational spring long)	max. ± 1 mm	max. ± 0.3 mm	max. $\pm 2^\circ$
S8 (tether arm long)	max. ± 0.5 mm	max. ± 0.3 mm	max. $\pm 2^\circ$
E2 (C-face tether)	max. ± 0.5 mm	max. ± 0.3 mm	max. $\pm 2^\circ$

Mounting:

Mounting using the spring element - short:

When mounting the encoder, ensure that dimension **L** is larger than the maximum axial play of the drive in the direction of the arrow.

Mounting using the spring element - long:

Cylindrical pin fed through the bore of the spring.

Large Bore Type RI-43 (Hollow Shaft) Accessories

Isolation Insert

The RI-43 encoder is used for AC vector motor and general industrial applications. For AC vector motor applications, the encoder should be electrically isolated from the motor chassis to minimize encoder bearing currents and ground noise. An isolation insert for the hollow shaft is provided with the encoder by specifying N42 in the "special insert option" decode. **When ordering isolation inserts separately, choose option 38 with a bore diameter of 38 mm.**

Part Number:	Inner Dimensions
RSA - A3	12.7 mm (1/2")
RSA - A4	15.875 mm (5/8")
RSA - 12	12 mm
RSA - 14	14 mm
RSA - 15	15 mm
RSA - 16	16 mm
RSA - 18	18 mm
RSA - A5	19.05 mm (3/4")
RSA - 20	20 mm
RSA - 25	25 mm
RSA - A6	25.4 mm (1")
RSA - A7	28.58 mm (1-1/8")
RSA - 30	30 mm
RSA - A8	31.75 mm (1-1/4")
RSA - 32	32 mm

For general industrial applications, isolation is not required and the decode for "special insert options" can be left blank.

Isolation insert for hollow shaft $\varnothing 42$ mm:

External diameter 42 mm
Internal diameter 38 H7 in accordance with ISO 286-2
Order Number: RSA-38

Large Bore Type RI-43 (Hollow Shaft) Accessories

Part Number:
ENCODER COVER KIT

Description:
Cover kit for 4.5" C-face motors

Included: (3) 3/8 x 16 x 3/4 bolts, (3) washers

Part Number:
RSA-TAPER

Description:
Mounting kit adapts the RI-43 hollow shaft encoder for mounting onto a tapered shaft. Tapered shafts are used for high-precision direct coupling to devices. An isolating insert is also included in the mounting kit; this reliably protects the encoder from shaft currents.

Included: Insert for cone blind hole, cone 1:10, 17 mm length, isolation insert, allen screw for tightening

We reserve the right to make technical alterations without prior notice.

Incremental Encoders

Wave Forms

Outputs

All Turck encoders come standard with six channels, where A leads B in the clockwise direction and the standard index is gated with A & B. The tolerance of the wave form affects the control, and in some cases it may affect the smoothness of system operation.

Wave Form Tolerances

<p>A leads B when the shaft is turned in the clockwise direction viewing the shaft or collet end.</p> <p>This is Turck's standard. This format applies to the pin key codes listed below.</p>		<p>B leads A when the shaft is rotated in the clockwise direction viewing the shaft or collet end.</p> <p>This format applies to the pin key codes listed below.</p>	
<p>A leads B, Z gated with A & B. This is Turck's standard. Z is 90° wide.</p>		<p>Code N24: B leads A, Z gated with A & B. Z is 90° wide.</p>	
<p>Code N21: A leads B, Z gated with B. Z is 180° wide.</p>		<p>Code N25: B leads A, Z gated with B. Z is 180° wide.</p>	
<p>Code N22: A leads B, Z gated with A. Z is 180° wide.</p>		<p>Code N26: B leads A, Z gated with A. Z is 180° wide.</p>	
<p>Code N23: A leads B, Z ungated. Z is 330° to 360° wide.</p>		<p>Code N27: B leads A, Z is ungated. Z is 330° to 360° wide.</p>	
<p>Code N28: A leads B, Z is 180° wide.</p>		<p>Code N29*: B leads A, Z gated with B-bar. Z is 180° wide.</p>	
<p>Code N33*: A leads B, Z gated with B-bar. Z is 180° wide.</p>		<p>Code N30: B leads A, Z is a negative marker gated with B. Z is 180° wide.</p>	
<p>Code N31: A leads B, Z is a minimum with of 270° (electrical degrees).</p>		<p>Code N32: B leads A. Z has a minimum width of 270°.</p>	

Note: * For RI-10/12/65 encoders, Z is 160° Wide

Magnetic Ring Assembly Type RMK-2

High rotational speed

High IP

Shock/vibration resistant

Reverse polarity protection

Robust

- High shock and vibration resistance.
- Sturdy housing with IP67 protection. Option: special housing for maximum resistance against condensation (IP68 / IP69K, resistance to cyclic humidity acc. to EN 60068-3-38 as well as damp heat acc. to EN 60068-3-78).
- Non-contact measuring system, free from wear, ensures a long service life.

Compact

- Requires very little installation space
Bore sizes available up to 30 mm.

Simple Installation

- Large mounting tolerance between magnetic band and sensor head.
- Slotted hole mounting ensures simple alignment.
- Function display via LED.

Mechanical characteristics:

Max speed:	12000 rpm	
Protection:	Q10	IP67 acc. to EN 60529
	P10	IP68 / IP69K acc. to EN 60529, DIN 40050-9 and humidity tested acc. to EN 60068-3-38, EN 60068-3-78
Working temperature:	-4 to +176 °F [-20 to +80 °C]	
Shock resistance:	500 g (5000 m/s ²), 1 ms	
Vibration resistance:	30 g (300 m/s ²), 10-2000 Hz	
Pole gap:	2 mm from pole to pole	
Housing (sensor head):	aluminum	
Cable:	2 m [6.56'] long, PUR 8 x 0.14 mm ² [AWG 26], shielded, may be used in flexing cable installations	
Status LED:	green	pulse index
	red	error; speed too high or magnetic fields too weak

RoHS compliant acc. to guideline EU 2011/65/EU

We reserve the right to make technical alterations without prior notice.

- Non-contact measuring system, free from wear, ensures a long service life.

Compact

- Requires very little installation space.

Simple Installation

- Large mounting tolerance between magnetic band and sensor head.
- Slotted hole mounting ensures simple alignment.
- Function display via LED.

Mechanical characteristics:

Max speed:	12000 rpm	
Protection:	Q10	IP67 acc. to EN 60529
	P10	IP68 / IP69K acc. to EN 60529, DIN 40050-9 and humidity tested acc. to EN 60068-3-38, EN 60068-3-78
Working temperature:	-4 to +176 °F [-20 to +80 °C]	
Shock resistance:	500 g (5000 m/s ²), 1 ms	
Vibration resistance:	30 g (300 m/s ²), 10-2000 Hz	
Pole gap:	2 mm from pole to pole	
Housing (sensor head):	aluminum	
Cable:	2 m [6.56'] long, PUR 8 x 0.14 mm ² [AWG 26], shielded, may be used in flexing cable installations	
Status LED:	green	pulse index
	red	error; speed too high or magnetic fields too weak

RoHS compliant acc. to guideline EU 2011/65/EU

We reserve the right to make technical alterations without prior notice.

Incremental Encoders

Rotary Position Technology

Incremental Encoders

Large Bore Magnetic Ring Assembly Type RMKL-2

Electrical characteristics:

Output circuit [Key Code]:	Push-Pull [2R]	RS422 [4K]
Power supply:	4.8 - 30 VDC	4.8 - 26 VDC
Power consumption (no load):	typ. 25 mA max. 60 mA	typ. 25 mA max. 60 mA
Permissible load/channel:	±20 mA	120 ohm
Min. pulse edge interval:	1 µs	
Signal level:	High Low	min. +V - 2.0 V max. 0.5 V
Reference signal:	index periodical ¹⁾	
System accuracy:	typ. 0.3° with shaft tolerance g6	
Pulse rate [ppr] ²⁾ :	700	2240
max. speed rpm	12000	6600
Pulse rate [ppr] ²⁾ :	1600	5120
max. speed rpm	9300	2900

¹⁾ At every pole change. The signal is generated by the sensor.
²⁾ With an input frequency of the evaluation unit of 250kHz.

Signal Figures:

With rotation of the magnetic ring in the CW-direction (see draft "Permissible Mounting tolerances").

- 1] Min. pulse interval: pay attention to the instructions in the technical data
- 2] Periodic index signal (every 2 mm); the logical assignment A, B and 0-signal can change

Standard Wiring:

Connection Type:	Common (0V)	+V	A	\bar{A}	B	\bar{B}	0	$\bar{0}$	\perp
Cable:	WH	BN	GN	YE	GY	PK	BU	RD	shield ³⁾

³⁾ Shield is attached to sensor housing.

Absolute Encoders

Rotary Position Technology

Absolute Encoders, Singleturn

Absolute, Singleturn Encoder Type RS-06 (Shaft) / RS-07 (Blind Hollow Shaft) Analog

Rugged

- Non-contact measuring system: **Ensures long service life and the reliability of the application.**
- **Stays sealed even when subjected to harsh everyday use.** Solid die-cast housing with up to IP69K protection **offers security against failures in the field.**
- Wide temperature range of -40 to +185 °F (-40 to +85 °C).
- **Increased ability to withstand vibration and installation errors.** High shock (> 500 g) and vibration resistance (> 30 g) **eliminates machine downtime and repairs.**

Absolute

Compact

- **Can be used where space is tight:** Overall diameter of only 36 mm.
- **Shaft version can be mounted on a tight radius:** fixing holes on Ø 26 mm.
- **Hollow shaft version is ideal for large shafts:** blind hollow shaft up to 10 mm.

Versatile

- **Interface of 4-20 mA, 0-10 V:** One size available for different applications.
- **Measuring range of 45°, 90°, 180° and 360°.**
- **Easy diagnosis in case of fault condition:** Error indication via red LED (only current output).
- **Hollow shaft version may be fixed individually:** Torque stop and flex coupling available.
- **May be used in outdoor applications with large fluctuations in temperature:** Resistant against humidity and condensation.

Mechanical Characteristics:

Max. speed:	6,000 RPM
Starting torque:	< 8.5 oz-in (< 0.06 Nm)
Radial load capacity of shaft:	9.0 lbs (40 N)
Axial load capacity of shaft:	4.5 lbs (20 N)
Weight:	approx. 0.44 lbs (0.2 kg)
Protection acc. to EN 60 529 / DIN 40050-9:	IP67 / IP69K
Working temperature range:	-40 to +185 °F (-40 to +85 °C)
Materials:	Shaft: stainless steel, Flange: aluminium, Housing: die cast zinc, Cable: PUR
Shock resistance acc. to EN 60068-2-27:	500 g (5,000 m/s ²), 6 ms
Vibration resistance acc. to EN 600688-2-6:	30 g (300 m/s ²), 10-2,000 Hz
Permanent shock resistance acc. to EN 60068-2-29:	100 g (1,000 m/s ²), 2 ms
Vibration (broad-band random) to EN 60068-2-64:	5-2500 Hz, 10 g (100 m/s ²) - rms

All-round protection:

Bearing-Lock:

IP69K protection on the flange side, robust bearing assemblies with interlocking bearings, mechanically protected shaft seal.

Protected Sensor:

Fully encapsulated electronics, separate mechanical bearing assembly.

We reserve the right to make technical alterations without prior notice.

Absolute, Singleturn Encoder Type RS-06 (Shaft) / RS-07 (Blind Hollow Shaft) Analog

Electrical Characteristics Current Interface 4-20 mA:

Sensor:	
Supply voltage:	10-30 VDC
Current consumption (without output load):	max. 38 mA
Reverse polarity protection at power supply (+V):	Yes
Measuring range:	45°, 90°, 180° or 360°
Resolution/Code:	12 bit
Linearity 77 °F (25 °C):	< 1° (360° measurement range)
Repeat accuracy 77 °F (25 °C):	< 0.1° (360° measurement range)
Status LED:	Red: sensor break detection, input too high Green: reference point (CW: 0° to 1°) (CCW: 0° to -1°)

4-20 mA Current Loop:

Output load:	max. 200 ohms at 10 VDC max. 900 ohms at 24 VDC
Setting time:	1 ms ($R_{load} = 400 \text{ Ohm}$, 77 °F (25 °C))
Short-circuit protected outputs: when the supply voltage is correctly applied, then output to output is short-circuit protected, but not output to 0V or to +V.	
Supply voltage and sensor output signal are not galvanically isolated.	

Electrical Characteristics Voltage Interface

Sensor:	
Supply voltage:	0-5 V, 10-30 VDC 0-10 V, 15-30 VDC
Current consumption (without output load):	max. 35 mA
Reverse polarity protection at power supply (+V):	Yes
Measuring range:	45°, 90°, 180° or 360°
Resolution/Code:	12 bit
Linearity 77 °F (25 °C):	< 1° (360° measurement range)
Repeat accuracy:	< 0.1° (360° measurement range)

Voltage Output:

Current output:	max. 10 mA
Setting time:	< 1 ms ($R_{load} \geq 1 \text{ KOhm}$, 77 °F (25 °C))
Supply voltage and sensor output signal are not galvanically isolated.	
Short-circuit protected outputs: when the supply voltage is correctly applied, then output to output is short-circuit protected, but not output to 0V or to +V.	
Status LED	Green: reference point display turns on at cw: between 0° and 1° at ccw: between 0° and -1°

General Electrical Characteristics:

RoHS compliant:	acc. to EU guideline 2011/65/EU
-----------------	---------------------------------

Standard Wiring:

Connection Type:	Common (0 V)	+V	+I	-I
Cable:	WH	BN	GN	YE
M12 Eurofast:	3	2	4	5

Wiring Diagram:

* Length in meters.

We reserve the right to make technical alterations without prior notice.

Absolute Encoders

Rotary Position Technology

Absolute Encoders, Singleturn

Absolute, Singleturn Encoder Type RS-06 (Shaft) / RS-07 (Blind Hollow Shaft) Analog

Note: Encoders must be ordered with a clockwise or counterclockwise profile. This determines whether the analog output increases or decreases in the given direction.

Example (Output Signal Profile):

Measuring range 45° / 90° / 180° / 360°

Clockwise (CW) Version

Example (Output Signal Profile):

Measuring range 45° / 90° / 180° / 360°

Counterclockwise (CCW) Version

CANopen

Rugged

- Non-contact measuring system: **Ensures long service life and the reliability of the application.**
- **Stays sealed even when subjected to harsh everyday use:** Solid die-cast housing with up to IP69K protection **offers security against failures in the field.**
- Wide temperature range of -40 to +185 °F (-40 to +85 °C).
- **Increased ability to withstand vibration and installation errors:** High shock (> 500 g) and vibration resistance (> 30 g) **eliminates machine downtime and repairs.**

Absolute

CANopen

Compact

- **Can be used where space is tight:** Overall diameter of only 36 mm.
- **Shaft version can be mounted on a tight radius:** Fixing holes on Ø 26 mm.
- **Hollow shaft version is ideal for large shafts:** Blind hollow shaft up to 10 mm.

Versatile

- **CANopen fieldbus** with the latest profiles.
- **Connections for every application:** M12 connector or cable connection.
- **Real-time data: Position, speed or working area:** Variable PDO mapping in the memory.
- **Fast, error-free start-up, without setting any switches:** LSS services for configuration of the node address and baud rate via CIA DS 305 V2.0. Node address, baud rate and termination can be programmed via the bus.
- **Hollow shaft version may be fixed individually:** Torque stop and flex coupling available.
- **May be used in outdoor applications with large fluctuations in temperature:** Resistant against humidity and condensation.

Mechanical Characteristics:

Max. speed:	6,000 RPM
Starting torque:	< 8.5 oz-in (< 0.06 Nm)
Radial load capacity of shaft:	9.0 lbs (40 N)
Axial load capacity of shaft:	4.5 lbs (20 N)
Weight:	approx. 0.44 lbs (0.2 kg)
Protection acc. to EN 60 529 / DIN 40050-9:	IP67 / IP69K
Working temperature range:	-40 to +185 °F (-40 to +85 °C)
Materials:	Shaft: stainless steel, Flange: aluminium, Housing: die cast zinc, Cable: PUR
Shock resistance acc. to DIN-IEC 68-2-27:	500 g (5,000 m/s ²), 6 ms
Vibration resistance acc. to DIN-IEC 68-2-6:	30 g (300 m/s ²), 10-2,000 Hz
Permanent shock resistance acc. to DIN-IEC 68-2-29:	100 g (1,000 m/s ²), 2 ms
Vibration (broad-band random) to DIN-IEC 68-2-64:	5-2500 Hz, 10 g (100 m/s ²) - rms

All around protection:

Bearing-Lock:

IP69K protection on the flange side, robust bearing assemblies with interlocking bearings, mechanically protected shaft seal.

Protected Sensor:

Fully encapsulated electronics, separate mechanical bearing assembly.

We reserve the right to make technical alterations without prior notice.

Absolute Encoders

Rotary Position Technology

Absolute Encoders, Singleturn

Absolute, Singleturn Encoder Type RS-52 (Shaft) / RS-53 (Blind Hollow Shaft) CANopen

General Electrical Characteristics:

Sensor:

Supply voltage:	8-30 VDC
Current consumption (without output load):	Max. 25 mA
Reverse polarity protection at power supply (+V):	Yes
Measuring range:	360°
Linearity:	< 1
Repeat accuracy 77 °F (25 °C):	< 0.1
Data refresh rate:	400 µs
RoHS compliant acc. to EU guideline 2011/65/EU	
UL approval:	file E356899

Interface Characteristics CANopen:

Resolution:	1-16384 (14 bit), (scalable: 1-16384)
Default value:	16384 (14 bit)
Code:	Binary
Interface:	CAN High-Speed according to ISO 11898, Basic and Full CANCAN Specification 2.0 B
Protocol:	CANopen profile DS 406 V3.2 with manufacturer-specific add-ons LSS-Services DS305 V2.0
Baud rate:	10-1000 kbit/s (software configurable)
Node address:	1-127 (software configurable)
Termination switchable:	Software configurable
LSS Services:	CIA LSS protocol DS305 Global command support for node address and baud rate. Selective commands via attributes of the identity object

Diagnostic LED (two-color, red/green):

LED ON or blinking red:	Error display
LED ON or blinking green:	Status display

General Information about CANopen

The RS-52 and RS-53 series of encoders support the latest CANopen communication profile according to DS 301 V4.02. In addition, device-specific profiles like the encoder profile DS406 V3.2 are available.

The following operating modes may be selected: Polled Mode, Cyclic Mode, Sync Mode. Moreover, scale factors, preset values, limit switch values and many other additional parameters can be programmed via the CANopen fieldbus. When switching the device on, all parameters, which have been saved on a flash memory to protect them against power failure, are loaded again.

Position and status output values may be combined in a freely variable way as mapping.

The encoders are available with a connector or a cable connection. The device address and baud rate can be set or modified by means of the software. The two-color LED indicates the operating or fault status of the CANopen fieldbus, as well as the status of the internal diagnostics.

Standard Wiring:

Connection Type:	+V	Common (0 V)	CAN GND	CAN High	CAN Low
Cable:	BN	WH	GY	GN	YE
M12 Eurofast:	2	3	1	4	5

CANopen Communication Profile DS301 V4.02

The following Class C2 functionality is integrated:

- NMT Slave
- Heartbeat Protocol
- Identity Object
- Error Behavior Object
- Variable PDO Mapping self-start programmable (power on to operational), 3 Sending PDO's
- Node address, baud rate and CANopen
- Programmable termination

CANopen Encoder Profile DS406 V3.2

The following parameters may be programmed:

- Event mode
- One work area with upper and lower limit and the corresponding output states
- Variable PDO mapping for position, speed and work area status
- Extended failure management for position sensing with integrated temperature control
- User interface with visual display of bus and failure status – one LED, two colors
- Customer-specific memory – 16 Bytes
- Watchdog controlled device

LSS Layer Setting Services DS305 V2.0

- Global support of Node-ID and baud rate
- Selective protocol via identity object (1018h)

General Information Concerning SAE J1939

The protocol J1939 originates from the international Society of Automotive Engineers (SAE) and operates on the physical layer with high speed CAN as per ISO11898. The application emphasis lies in the area of the power train and chassis of commercial vehicles. It serves to transfer diagnostic data (for example, motor speed, position, temperature) and control information. Series RS-52 and RS-53 encoders support the total functionality of J1939.

This protocol is a multimaster system with decentralized network management that does not involve channel-based communication. It supports up to 254 logic nodes and 30 physical control devices per segment. The information is described as Parameters (signals) and combined on four memory pages (Data Pages) into Parameter Groups (PGs). Each Parameter Group can be identified via a unique number, the Parameter Group Number (PGN). Independently of this, each signal is assigned a unique SPN (Suspect Parameter Number).

The major part of the communication occurs cyclically and can be received by all control devices without the explicit request for data (Broadcast). Furthermore, the parameter groups are optimized to a length of eight data bytes. This enables very efficient utilization of the CAN protocol.

If greater amounts of data need to be transferred, then transport protocols (TP) can be used: BAM (Broadcast Announce Message) and CMTD (Connection Mode Data Transfer). With BAM TP the transfer of data occurs as a broadcast.

Encoder Implementation SAE J1939

- PGNs that are adaptable to the customer's application
- Resolution of address conflicts -> Address Claiming (ACL)
- Continuous checking whether control addresses have been assigned twice within a network
- Change of control device addresses during run-time
- Unique identification of a control device with the help of a name that is unique worldwide. This name serves to identify the functionality of a control device in the network
- Predefined PGs for Position, Speed and Alarm
- 250 kbit/s, 29-bit Identifier
- Watchdog controlled device

A two-color LED, located on the rear of the encoder, signals the operating and fault status of the J1939 protocol, as well as the status of the internal sensor diagnostics.

Reliable

- **Increased ability to withstand vibration and installation errors.** Sturdy Bearing-Lock Design bearing structure eliminates machine downtime and repairs.
- **Fewer components and connection points increase the operational reliability:** Turck OptoASIC technology with highest integration density (Chip-on-Board).
- Die cast housing and protection up to IP67: **Remains sealed even when subjected to harsh everyday use.**
- Wide temperature range of -40 to +194 °F (-40 to +90 °C).
- **Easy diagnosis in case of fault condition.** Status indication by means of LED, sensor, voltage and temperature monitoring.

Absolute

Fast

- **High accuracy:** Update rate of the whole position value above 100 kHz for a max. jitter of 1 μs (real-time).
- **High productivity due to very short regulation cycles:** Clock rate with SSI up to 2 MHz, with BiSS-C up to 10 MHz.
- **High-resolution feedback system achievable in real-time:** SinCos incremental outputs.

Versatile

- **Connections for every application:** Tangential cable or M12 connector.
- **Open interfaces ensure flexibility and independence:** SSI or BiSS-C with Sine-Cosine-Option incremental track RS422.
- Multiple mounting brackets for easy installation.
- **Compact design.**
- **Fast and easy start-up on site:** Preset and reversal of rotation direction by control inputs.
- **Direct mounting on standard diameter shafts up to 10 mm** through hollow shaft up to 8 mm.

Mechanical Characteristics:

Max. speed:	
IP65 shaft or blind hollow shaft version:	12,000 RPM, continuous operation 10,000 RPM
IP67 shaft version or IP65 hollow shaft version:	10,000 RPM, continuous operation 8,000 RPM
Starting torque without shaft sealing:	< 1 oz-in (< 0.007 Nm)
Starting torque with shaft sealing:	< 1.4 oz-in (< 0.01 Nm)

SSI/BiSS-C

General Electrical Characteristics:

Supply voltage:	5 VDC \pm 5% or 10-30 VDC
Current consumption (without output load):	5 VDC: max. 60 mA, 10-30 VDC: max. 30 mA
Reverse polarity protection at power supply (+V):	yes
RoHS compliant according to EU guideline 2011/65/EU	
UL approval:	file E356899

General Interface Characteristics:

Output driver:	RS485 transceiver type
Permissible load/channel:	max. \pm 30 mA
Signal level high:	typ. 3.8 V
Signal level low at $I_{load} = 20$ mA:	typ. 1.3 V
Short-circuit protected outputs:	yes ¹⁾

Interface Characteristics SSI:

Singleturn resolution:	10-17 bit
Code:	Binary or Gray
SSI clock rate:	\leq 14 bit: 50 kHz-2 MHz \geq 15 bit: 50 kHz-125 kHz
Monoflop time:	\leq 15 μ s
Note:	If clock starts cycling within monoflop time, a second data transfer starts with the same data. If clock starts cycling after monoflop time, the data transfer starts with updated values. Max. update rate is dependent on clock speed, data length and monoflop time.
Time jitter (data request to position latch):	\leq 1 μ s up to 14 bits, 4 μ s up to 15-17 bits
Status and Parity bit:	optional on request

Interface Characteristics BiSS-C:

Singleturn resolution:	10-17 bit
Code:	Binary
Clock rate:	up to 10 MHz
Max. update rate:	$<$ 10 μ s, depending on clock speed and data length
Time jitter (data request to position latch):	\leq 1 μ s
Note:	• Bidirectional, programmable parameters are: resolution, code, direction, alarms and warnings • CRC data verification

Incremental Output (A/B) 2048 ppr:

	Sin/Cos	RS 422 (TTL compatible)
Max. -3dB frequency:	400 kHz	400kHz
Signal level:	1 Vpp (\pm 20%)	high: min. 2.5 V low: max. 0.5 V
Short-circuit proof:	yes ¹⁾	yes ¹⁾

¹⁾ Short-circuit to 0 V or to output, one channel at a time, supply voltage correctly applied

SET Input:

Input characteristics:	active HIGH
Input type:	comparator
Signal level high:	min. 60% of V+ (supply voltage), max: V+
Signal level low:	max. 30% of V+ (supply voltage)
Input current:	$<$ 0.5 mA
Min. pulse duration (SET):	10 ms
Input delay:	1 ms
New position data readable after:	1 ms
Internal processing time:	200 ms

The encoder can be set to zero at any position by means of a HIGH signal on the SET input. Other preset values can be factory programmed. The SET input has a signal delay time of approximately 1 ms. Once the SET function has been triggered, the encoder requires an internal processing time of approximately 200 ms before the new position data can be read. During this time the supply voltage must not be switched off. The set function should only be carried out when the encoder is at rest.

DIR Input:

A HIGH signal switches the direction of rotation from the default CW to CCW. This inverted function can also be factory programmed. If DIR is changed when the device is already switched on, then this will be interpreted as an error. The LED will come ON and the status output will switch to LOW.

Status Output:

Output driver:	Open collector, internal pull up resistor 22 kOhm
Permissible load:	max 20 mA
Signal level high:	+V
Signal level low:	$<$ 1 V
Active at:	Low

The status output serves to display various alarm or error messages. In normal operation the status output is HIGH (open-collector with int. pull-up 22k).

An active status output (LOW) indicates:

- LED error (failure or aging)
- Over temperature
- Undervoltage

In the SSI mode, the fault indication can only be reset by switching off the power supply to the device.

Power-On Delay:

After Power-ON the device requires a time of approx. 150 ms before valid data can be read. Hot swapping of the encoder should be avoided.

Absolute Encoders, Singleturn

Absolute, Singleturn Type RS-45 (Shaft) / RS-49 (Blind Hollow Shaft)

CANopen

Bearing-Lock

High rotational speed

Temperature

High IP

High shaft load capacity

Shock/vibration resistant

Magnetic field proof

Short-circuit protected

Reverse polarity protection

Rugged

- Sturdy bearing construction: Bearing-Lock design for resistance against vibration and installation errors.
- Ideal for use outdoors, thanks to IP67 protection.
- Wide temperature range: -40 to +185 °F (-40 to +85 °C).

Absolute

CANopen

Versatile

- CANopen with current encoder profile.
- LSS services for configuration of the node address and baud rate.
- Variable PDO mapping in the memory.
- High-precision optical sensor technology can achieve a resolution of up to 17 bits.

Compact

- Overall size of 36 x 42 mm:
Hollow shaft of up to 8 mm,
blind hollow shaft of up to 10 mm.

Mechanical Characteristics:

Max. speed: IP65 shaft or blind hollow shaft version:	12,000 RPM, continuous operation 10,000 RPM
IP67 shaft version or IP65 hollow shaft version:	10,000 RPM, continuous operation 8,000 RPM
Starting torque without shaft sealing:	< 1 oz-in (< 0.007 Nm)
Starting torque with shaft sealing:	< 1.4 oz-in (< 0.01 Nm)
Radial load capacity of shaft:	9.0 lbs (40 N)
Axial load capacity of shaft:	4.5 lbs (20 N)
Weight:	approx. 0.44 lbs (0.2 kg)
Protection acc. to EN 60 529:	Housing: IP67 Shaft: IP65, opt. IP67
Working temperature:	-40 to +185 °F (-40 to +85 °C)
Materials:	Shaft/Hollow shaft: stainless steel, Flange: aluminum, Housing: die cast zinc, Cable: PUR
Shock resistance acc. to DIN-IEC 68-2-27:	> 250g (> 2,500 m/s ²), 6 ms
Vibration resistance acc. to DIN-IEC 68-2-6:	> 10 g (>100 m/s ²), 55-2,000 Hz

Diagnostic LED (two-color, red/green):

LED ON or blinking	red: error display
	green: status display

General Electrical Characteristics:

Supply voltage:	10-30 VDC
Current consumption (no load):	80 mA
Reverse connection of the supply voltage (+V):	yes
RoHS compliant acc. to EG-guideline 2002/95/EG	
UL approval:	file E356899

Interface Characteristics CANopen:

Resolution Singleturn:	1-65536 (16 bit), scaleable: 1-65536
Default value Singleturn:	8192 (13 bit)
Code:	Binary
Interface:	CAN High-Speed according to ISO 11898, Basic and Full-CAN, CAN Specification 2.0 B
Protocol:	CANopen profile DS 406 V3.2 with manufacturer specific add-ons LSS-Service DS305 V2.0
Baud rate:	10-1000 kbit/s (software configurable)
Node address:	1-127 (software configurable)
Termination switchable:	Software configurable
LSS Protocol	CIA LSS protocol DS305 Global command support for node address and baud rate. Selective commands via attributes of the identity object

General Information About CANopen

The CANopen encoder series support the latest CANopen communication profile according to DS 301 V4.02 . In addition, device specific profiles, like the DS 406 V3.2, are available.

The following operating modes may be selected: Polled Mode, Cyclic Mode, Sync Mode. Moreover, scale factors, preset values, limit switch values and many other additional parameters can be programmed via the CANbus. When switching the device on, all parameters, which have been saved on a flash memory to protect them against power failure, are loaded again. Position, speed and status of the working area output values may be combined in a freely variable way as PDO mapping.

The encoders are available with a connector or a cable connection. The device address and baud rate may be set/modified by means of the software. A two-color LED indicates the operating or fault status of the CANbus, as well as the status of the internal diagnostics.

CANopen Communication Profile DS301 V4.02

The following functionality is integrated. Class C2 functionality:

- NMT Slave
- Heartbeat Protocol
- Identity Object
- Error Behavior Object
- Variable PDO Mapping self-start programmable (Power on to operational), 3 sending PDO's
- Node address, baud rate and CANbus/programmable termination

CANopen Encoder Profile DS406 V3.2

The following parameters may be programmed:

- Event mode
- One work area with upper and lower limit and the corresponding output states
- Variable PDO mapping for position, speed, work area status
- Extended failure management for position sensing
- User interface with visual display of bus and failure status: 1 LED, two-color
- Customer-specific memory - 16 bytes
- Customer-specific protocol
- "Watchdog controlled" device

LSS Layer Setting Services DS305 V2.0

- Global support of Node-ID and baud rate
- Selective protocol via identity object (1018h)

Reliable

- **Increased ability to withstand vibration and installation errors.** Sturdy Bearing-Lock design structure eliminates machine downtime and repairs.
- **Fewer components and connection points increase the operational reliability.** Turck OptoASIC technology with highest integration density (Chip-on-Board).
- Die cast housing and protection up to IP67: **Remains sealed even when subjected to harsh everyday use.**
- Wide temperature range of -40 to +194 °F (-40 to +90 °C).
- **Easy diagnosis in case of fault condition.** Status indication by means of LED, sensor, voltage and temperature monitoring.

Absolute

Fast

- **High accuracy:** Update rate of the whole position value above 100 kHz for a max. jitter of 1 µs (real-time).
- **High productivity due to very short regulation cycles:** Clock rate with SSI up to 2 MHz, with BiSS-C up to 10 MHz.
- **High-resolution feedback system achievable in real-time:** SinCos incremental outputs.

Versatile

- **Connections for every application:** Cable, M12 connector or M12 connector.
- **Open interfaces ensure flexibility and independence:** SSI or BiSS-C with Sine-Cosine-Option.
- Multiple mounting brackets for easy installation.
- **Only the functionality really needed by the user is implemented:** Status LED and set key are optional.
- **Fast and easy start-up:** Set key or preset by means of a control input.
- **Direct mounting on large diameter shafts** through hollow shaft up to 15 mm.

Mechanical Characteristics:

Shaft Version:

Max. speed without shaft sealing (IP65) up to 158 °F (70 °C):	12,000 RPM, continuous 10,000 RPM
Max. speed without shaft sealing (IP65) up to Tmax:	8,000 RPM, continuous 5,000 RPM
Max. speed with shaft sealing (IP67) up to 158 °F (70 °C):	11,000 RPM, continuous, 9 000 RPM
Max. speed with shaft sealing (IP67) up to Tmax:	8,000 RPM, continuous 5,000 RPM

Hollow Shaft Version:

Max. speed without shaft sealing (IP65) up to 158 °F (70 °C):	9,000 RPM, continuous 6,000 RPM
Max. speed without shaft sealing (IP65) up to Tmax:	6,000 RPM, continuous 3,000 RPM
Max. speed with shaft sealing (IP67) up to 158 °F (70 °C):	8,000 RPM, continuous 4,000 RPM
Max. speed with shaft sealing (IP67) up to Tmax:	4,000 RPM, continuous 2,000 RPM

Starting torque without shaft sealing (IP65):	Shaft version: < 1.4 oz-in (< 0.01 Nm) Hollow shaft version: < 4.25 oz-in (< 0.03 Nm)

We reserve the right to make technical alterations without prior notice.

Absolute, Singleturn Type RS-24 (Shaft) / RS-31 (Hollow Shaft)

SSI/BiSS-C

General Electrical Characteristics:

Supply voltage:	5 VDC + 5% or 10-30 VDC
Current consumption (without output load):	5 VDC: max. 70 mA, 10-30 VDC: max. 45 mA
Reverse polarity protection at power supply (+V):	Yes (only 10-30 VDC)
RoHS compliant acc. to EU guideline 2011/65/EU	
UL approval:	file E356899

General Interface Characteristics:

Output driver:	RS485 Transceiver type
Permissible load/channel:	max. 20 mA
Signal level high:	typ. 3.8 V
Signal level low at $I_{load} = 20 \text{ mA}$:	typ. 1.3 V
Short-circuit protected:	Yes ²⁾

Interface Characteristics SSI:

Singleturn resolution:	10-14 bits and 17 bits ³⁾
Code:	Binary or Gray
SSI clock rate:	$\leq 14 \text{ bit}$ 50 kHz-2 MHz $\geq 15 \text{ bit}$ 50 kHz-125 kHz
Monoflop time:	$\geq 15 \mu\text{s}$ ³⁾
Note:	If clock starts cycling within monoflop time, a second data transfer starts with the same data. If clock starts cycling after monoflop time, the data transfer starts with updated values. Maximum update rate is dependent on clock speed, data length and monoflop time.
Time jitter (data request to position latch):	$< 1 \mu\text{s}$ up to 14 bits, $4 \mu\text{s}$ at 15-17 bits
Status and Parity bit:	optional on request

Interface Characteristics BiSS-C:

Singleturn resolution:	10-14 bits and 17 bits customer programmable ³⁾
Code:	Binary
Interfaces:	RS485
Clock rate:	up to 10 MHz
Max. update rate:	$< 10 \mu\text{s}$, depending on clock speed and data length
Time jitter (data request to position latch):	$\leq 1 \mu\text{s}$
Note:	• Bidirectional, programmable parameters are: resolution, code, direction, alarms and warnings • Multicycle data output, e.g. for temperature • CRC data verification

²⁾ Short-circuit to 0 V or to output, one channel at a time, supply voltage correctly applied

³⁾ Other options upon request

SET (zero or defined value) and DiRection (CW/CCW) Control Inputs:

Input characteristics:	High active
Receiver type:	Comparator
Signal level high:	min. 60% of V+ (Supply voltage), max: V+
Signal level low:	max. 25% of V+ (Supply voltage)
Input current:	$< 0.5 \text{ mA}$
Min. pulse duration (SET):	10 ms
Timeout after SET input:	14 ms
Reaction Time (DIR input):	1 ms

The encoder can be set to zero at any position by means of a HIGH signal on the SET input or by pressing the optional SET key. Other preset values can be factory-programmed. The SET input has a signal delay time of approximately 1 ms. Once the SET function has been triggered, the encoder requires an internal processing time of approximately 15 ms before the new position data can be read. During this time, the LED is ON and the status output is at LOW.

Status Output and LED:

Output driver:	Open collector, internal pull up resistor 22 kOhm
Permissible load:	Max. 20 mA
Signal level high:	+V
Signal level low:	$< 1 \text{ V}$
Active at:	Low

The optional LED (red) and the status output serve to display various alarm or error messages. In normal operation the LED is OFF and the status output is HIGH (open-collector with int. pull-up 22k).

If the LED is ON (status output LOW) this indicates:

- Sensor error, singleturn or multiturn (soiling, glass breakage etc.)
- LED error, failure or aging
- Over or under-temperature

In the SSI mode, the fault indication can only be reset by switching off the power-supply to the device.

DIR Input:

A HIGH signal switches the direction of rotation from the default clockwise to counter-clockwise. This inverted function can also be factory-programmed. If DIR is changed when the device is already switched on, then this will be interpreted as an error. The LED will come ON and the status output will switch to LOW.

Option Incremental Output (A/B), 2048 ppr:

	Sin/Cos	RS422 (TTL compatible)
-3dB frequency:	400 kHz	400 kHz

Reliable

- **Increased ability to withstand vibration and installation errors.** Sturdy Bearing Lock design structure eliminates machine downtime and repairs.
- **Fewer components and connection points increase the operational reliability.** Turck OptoASIC technology with highest integration density (Chip-on-Board).
- Die cast housing and protection up to IP67: **remains sealed even when subjected to harsh everyday use.**
- Wide temperature range.

Absolute

CANopen

Fast

- **Genuine time-servo position detection of several axes.** Extended CAN Sync Mode with real-time position acquisition.
- **Fast data availability while reducing the load on the bus and the controller.** Intelligent functions like the transmission of speed, acceleration or exiting a working area.

Versatile

- **CANopen fieldbus** with the latest profiles.
- **Connections for every application:** Bus terminal cover with M12 connector or cable connection or fixed connection with M12, M23 or D-Sub connector.
- **Real-time data: Position, speed or working area.** Variable PDO mapping in the memory.
- **Fast, error-free start-up, without setting any switches.** Node address, baud rate and termination can be programmed via the bus.

Mechanical Characteristics:

Max. speed without shaft sealing (IP65) up to 158 °F (70 °C):	9,000 RPM, continuous 7,000 RPM
Max. speed without shaft sealing (IP65) up to Tmax:	7,000 RPM, continuous 4,000 RPM
Max. speed with shaft sealing (IP67) up to 158 °F (70 °C):	8,000 RPM, continuous 6,000 RPM
Max. speed with shaft sealing (IP67) up to Tmax:	6,000 RPM, continuous 3,000 RPM
Starting torque without shaft sealing (IP65):	< 1.4 oz-in (< 0.01 Nm)
Starting torque with shaft sealing (IP67):	Shaft version: < 7 oz-in (< 0.05 Nm) Hollow shaft version: < 4.25 oz-in (< 0.03 Nm)
Moment of inertia:	Shaft version: 0.16 oz-in ² (3.0 x 10 ⁻⁶ kgm ²) Hollow shaft version: 0.328 oz-in ² (6.0 x 10 ⁻⁶ kgm ²)
Radial load capacity of shaft:	18 lbs (80 N)
Axial load capacity of shaft:	9 lbs (40 N)
Weight:	approx. 1.17 lbs (0.53 kg) with bus terminal cover approx. 1.10 lbs (0.50 kg) with fixed connection
Protection acc. to EN 60 529:	Housing: IP67, Shaft: IP65, opt. IP67
Working temperature:	-40 to +176 °F (-40 to +80 °C) ¹⁾
Materials:	Shaft/hollow shaft: stainless steel, Flange: aluminum, Housing: die cast zinc, Cable: PVC
Shock resistance acc. to DIN-IEC 68-2-27:	> 250 g (> 2,500 m/s ²), 6 ms
Vibration resistance acc. to DIN-IEC 68-2-6:	> 10 g (> 100 m/s ²), 55-2,000 Hz

¹⁾ Cable version: -22 to +167 °F (-30 to +75 °C)

SET key:
For quick, simple on-site start-up.

Green, red and yellow LEDs:
Failure-free operation immediately visible on the bus.

We reserve the right to make technical alterations without prior notice.

Absolute, Singleturn Type RS-25 (Shaft) / RS-33 (Blind Hollow Shaft)

CANopen

General Electrical Characteristics:

Supply voltage:	10-30 VDC
Current consumption (without output load):	Max. 90 mA
Reverse polarity protection at power supply (+V):	Yes
RoHS compliant acc. to EU guideline 2011/65/EU	
UL approval:	file E356899

SET Control Button (zero or defined value, option):

Protected against accidental activation, can only be depressed with the tip of a ball pen or similar.

Diagnostic LED (yellow):

LED on with: optical sensor path faulty (code error, LED error low voltage and over-temperature)

Interface Characteristics CANopen:

Singleturn resolution (maximum, scalable):	1-65536 (16 bits), default scale value is set to 8192 (13 bits)
Code:	Binary
Interface:	CAN High-Speed according ISO 11898, Basic and Full CANCAN Specification 2.0 B
Protocol:	CANopen profile DS 406 V3.2 with manufacturer-specific add-ons

Baud rate:	10-1000 kbits/s (set by DIP switches/software configurable)
Node address:	1-127 (set by rotary switches/software configurable)
Termination switchable:	Set by DIP switches, software configurable

General Information about CANopen

The RS-25/33 series of encoders support the latest CANopen communication profile according to DS 301 V4.02. In addition, device-specific profiles are available, such as DS 406 V3.2.

The following operating modes may be selected: Polled Mode, Cyclic Mode, Sync Mode. Moreover, scale factors, preset values, limit switch values and many other additional parameters may be programmed via the CANopen fieldbus. When switching the device on, all parameters, which have been saved on a flash memory to protect them against power failure, are loaded again.

Position, speed, acceleration and status output values may be combined in a freely variable way as PDO mapping.

The encoders are available with a connector or a cable connection. The device address and baud rate can be set or modified by means of the software. Models with a bus terminal cover and integrated T-shaped coupler allow a particularly easy installation via M12 connectors. The device address is set by means of two hexadecimal rotary switches. Furthermore, another DIP switch allows setting the baud rate and switching on a termination resistor. Three LEDs indicate the operating or fault status of the CANopen fieldbus, as well as the status of internal diagnostics.

CANopen Communication Profile DS 301 V4.02

The following Class C2 functionality is integrated:

- NMT Slave
- Heartbeat Protocol
- High Resolution Sync Protocol Identity Object
- Error Behavior Object
- Variable PDO Mapping self-start programmable (power on to operational), 3 Sending PDO's
- One receiving PDO for servo preset operation with minimal jitter
- Node address, baud rate and CANbus
- Programmable termination

CANopen Encoder Profile DS 406 V3.2

The following parameters may be programmed:

- Event mode
- Units for speed selectable (Steps/Sec or RPM)
- Factor for speed calculation (e.g. measuring wheel periphery), integration time for speed value of 1 to 32
- Two work areas with two upper and lower limits and the corresponding output states
- Variable PDO mapping for position, speed, acceleration and work area status
- Extended failure management for position sensing with integrated temperature control
- User interface with visual display of bus and failure status – 3 LEDs
- Optional – 32 CAMs programmable
- Customer-specific memory – 16 bytes

Key features:

The object 6003h "Preset" is assigned to an integrated key, accessible from the outside.
"Watchdog-controlled" device

Protocol:	EtherNet/EtherCAT

General Information about CoE (CAN over EtherCAT)

The RS-25/33 series of EtherCAT encoders support the CANopen communication profile according to DS 301. In addition, device-specific profiles are available.

Scaling, preset values, limit switch values and many other parameters can be programmed via the EtherCAT bus. When switching the device on, all parameters, which have been saved on a flash memory to protect them against power failure, are loaded again.

Position, speed, acceleration and status output values may be combined in a freely variable way as PDO mapping.

Diagnostic LED (Red):

LED is ON with the following fault conditions:
Sensor error (internal code or LED error), low voltage, over-temperature

Run LED (Green):

LED is ON with the following conditions:
Preop-, Safeop and Op-State (EtherCat status machine)

2 x Link LED (Yellow):

LED is ON with the following conditions (Port A and B)
Link detected

Modes:

Freerun, Distributed Clock (cycle time for Sync 0 pulse min. 125 µs or 62.5 µs with restrictions), Sync-Mode

CANopen Encoder Profile CoE (CAN over EtherCAT)

The following parameters are programmable:

- Units for speed selectable (Steps/Sec or RPM)
- Factor for speed calculation (e.g., circumference of measuring wheel)
- Integration time for the speed value from 1 to 32
- Two working areas with two upper and lower limits and the corresponding output states
- PDO mapping of position, speed/velocity, acceleration and working area
- Extended error management for position sensing with integrated temperature control
- User interface with visual display of bus and fault status – 4 LEDs
- Alarm and warning messages

Reliable

- **Increased ability to withstand vibration and installation errors.** Sturdy Bearing-Lock design bearing structure **eliminates machine downtime and repairs.**
- **Fewer components and connection points increase the operational reliability.** Turck OptoASIC technology with highest integration density (Chip-on-Board).
- Die cast housing and protection up to IP67: **Remains sealed even when subjected to harsh everyday use.**
- Wide temperature range.

Absolute

Fast

- **Fast data availability with reduced loading on the bus and controller:** Intelligent functions such as transmission of speed/velocity, acceleration or leaving a working area.
- **Fast, simple, error-free connection.**

Versatile

- **Up-to-the minute fieldbus performance:** PROFIBUS-DP V0 with the current encoder profile supports Class I and Class II.
- **Connection options:** Bus cover with M12 connector or cable connection.
- **Fast start-up:** with pre-defined GSD file. A variety of scaling options for the most diverse applications: 16 bit singleturn resolution; comprehensive diagnostics, programmable to Class II.

Mechanical Characteristics:

Max. speed without shaft sealing (IP65) up to 158 °F (70 °C):	9,000 RPM, continuous 7,000 RPM
Max. speed without shaft sealing (IP65) up to Tmax:	7,000 RPM, continuous 4,000 RPM
Max. speed with shaft sealing (IP67) up to 158 °F (70 °C):	8,000 RPM, continuous 6,000 RPM
Max. speed with shaft sealing (IP67) up to Tmax:	6,000 RPM, continuous 3,000 RPM
Starting torque without shaft sealing (IP65):	< 1.4 oz-in (< 0.01 Nm)
Starting torque with shaft sealing (IP67):	Shaft version: < 7 oz-in (0.05 Nm) Hollow shaft version: < 4.25 oz-in (< 0.03 Nm)
Moment of inertia:	Shaft version: 0.16 oz-in ² (3.0 x 10 ⁻⁶ kgm ²) Hollow shaft version: 0.328 oz-in ² (6.0 x 10 ⁻⁶ kgm ²)
Radial load capacity of shaft:	18 lbs (80 N)
Axial load capacity of shaft:	9 lbs (40 N)
Weight:	approx. 1.17 lbs (0.53 kg) with bus terminal cover approx. 1.10 lbs (0.50 kg) with fixed connection
Protection acc. to EN 60 529:	Housing: IP67, Shaft: IP65, opt. IP67
Working temperature:	-40 to +176 °F (-40 to +80 °C)
Materials:	Shaft: stainless steel, Flange: aluminum, Housing: die cast zinc, cable: PVC
Shock resistance acc. to DIN-IEC 68-2-27:	> 250 g (> 2,500 m/s ²), 6 ms

PROFIBUS-DP

Interface Characteristics PROFIBUS-DP:

Singleturn resolution (max, scalable):	1-65536 (16 bits), default scale value is set to 8192 (13 bits)
Code:	Binary
Interface:	Specification according to PROFIBUS-DP 2.0 Standard (DIN 19245 part 3)/RS485 driver galvanically isolated
Protocol:	PROFIBUS Encoder Profile V1.1 Class I and Class II with manufacturer-specific enhancements
Baud rate:	Max. 12 Mbits/s
Node address:	1-127 (set by rotary switches)
Termination switchable:	Set by DIP switches

SET Control Button (zero or defined value, option):

Protected against accidental activation, can only be pushed in with the tip of a ballpoint pen or similar.

Diagnostic LED (yellow):

LED on with:
Sensor error: PROFIBUS error

PROFIBUS Encoder-Profile V1.1

The PROFIBUS-DP device profile describes the functionality of the communication and the user-specific component within the PROFIBUS fieldbus system. For encoders, the encoder profile is definitive. Here the individual objects are defined independent of the manufacturer. Furthermore, the profiles offer space for additional manufacturer-specific functions; this means that PROFIBUS-compliant device systems may be used with the guarantee that they are ready for the future.

The following parameters can be programmed:

- Direction of rotation
- Scaling (number of steps per revolution)
- Preset value
- Diagnostics mode

The following functionality is integrated:

- Galvanic isolation of the bus stage with DC/DC converter
- Line driver according to RS485; max. 12 MB
- Address programmable via DIP switches
- Diagnostics LED
- Full Class I and Class II functionality

General Information about PROFINET IO

The PROFINET encoder implements the Encoder Profile 4.1. (according to the specification Encoder Version 4.1 Dec 2008).

It permits scaling and preset values, as well as many other additional parameters to be programmed via the PROFINET-Bus.

When switching on, all parameters are loaded from an EEPROM, where they were saved previously to protect them against power-failure, or taken over by the controller in the start-up phase.

Position, speed and many other states of the encoder can be transmitted.

PROFINET IO

The complete encoder profile according to Profile Encoder Version 4.1 as well as the Identification & Maintenance functionality Version 1.16 has been implemented. IM blocks 0, 1, 2, 3 and 4 are supported.

The **Media Redundancy Protocol** is implemented here. Basically, the advantage of MRP is that the functionality of the components, which are wired in a ring structure, is maintained in the case of a failure or breakage of the wires in any location.

EtherNet/IP

Reliable

- Increased ability to withstand vibration and installation errors. Sturdy Bearing-Lock design structure eliminates machine downtime and repairs.
- Wide temperature range of -40 to +176 °F (-40 to +80 °C).
- Fewer components and connection points increase the operational reliability: Turck OptoASIC technology with highest integration density (Chip-on-board).

Absolute

EtherNet/IP™

Fast

- 5x faster position value transfer than the usual market encoder – RPI time of 1 ms
- Fast and easy commissioning, configuration possible through cyclic services
- M12 connector ensures fast, simple, error-free connection

Versatile

- Thanks to the implementation of DLR (Device Level Ring) a single cable break does not lead to a "machine down" state.
- 16 bits total resolution, shafts up to 10 mm, blind hollow shafts up to 15 mm and certified EtherNet/IP functionality.
- The optical absolute singleturn EtherNet/IP encoders were designed for time sensitive applications. Their distinctive features help not only with the machine's performance as well as uptime, but also contribute to time and cost savings.

Mechanical Characteristics:

Max. speed shaft version (IP65) up to 158 °F (70 °C):	8,000 RPM, continuous 6000 RPM
Max. speed shaft version (IP65) up to Tmax:	6,000 RPM, continuous 4000 RPM

Vibration resistance acc. to EN 60068-2-26:	> 10 g (> 100 m/s ²), 55-2,000 Hz

General Information about EtherNet/IP

EtherNet/IP conformance tested acc. to version CT-12 of Dec. 11, 2014
EtherNet/IP specification Vol 2, Ed 1.17
CIP specification Vol 1, Ed 3.16.

Applications

Industrial Ethernet is increasingly imposing itself as the new communication standard in automation technology. The goal is to create a vertical integration – that is to say: only one core computer, from the control level up to the industrial production plants – that will be able to control any devices.

The Turck EtherNet/IP encoders demonstrate their abilities in the following application examples: automotive production, logistics, metal-working, textile, printing and packaging machines.

Energy Harvesting

Reliable

- Sturdy bearing construction in Bearing-Lock design for resistance against vibration and installation errors.
- Without gear and without battery, thanks to the Energy Harvesting technology.

Absolute

Application Oriented

- Current output 4 - 20 mA.
- Voltage output 0 - 10 V or 0 - 5 V.
- Measuring range scalable.
- Limit switch function.

Insensitive

- Reduced number of components ensures magnetic insensitivity.
- IP67 protection and wide temperature range -40 to +85 °C.

Mechanical Characteristics:

Max. speed:

Shaft or blind hollow shaft version:	6000 RPM
Without shaft seal (IP65):	3000 RPM (continuous)
Shaft or blind hollow shaft version:	4000 RPM
With shaft seal (IP67):	2000 RPM (continuous)

Starting torque (68 °F | 20 °C):

Without shaft seal (IP65):	< 1.0 oz - in (< 0.007 Nm)
With shaft seal (IP67):	< 1.4 oz - in (< 0.01 Nm)

Shaft load capacity:

Radial:	9.0 lbs (40 N)
Axial:	4.5 lbs (20 N)

Weight: approx. 0.44 lbs (0.2 kg)

Protection acc. to EN 60529: IP65 / IP67

Working temperature range: -40 to +185 °F (-40 to +85 °C)

Materials:

Shaft / Hollow shaft:	stainless steel
Flange:	aluminium
Housing:	zinc die-cast
Cable:	PVC

Shock resistance acc. to EN 60068-2-27: 250g (2500 m/s²), 6 ms

Vibration resistance acc. to EN 60060-2-6: 30g (300 m/s²), 10 - 2000 Hz

Absolute, Multiturn Type RM-97 (Shaft) / RM-98 (Blind Hollow Shaft)

Analog

General Electrical Characteristics Interface 4 - 20mA:

Power supply:	10 - 30 VDC
Current consumption (no load):	max. 30 mA
Reverse polarity protection at power supply (+V):	yes
Short-circuit protected outputs:	yes ¹⁾
Measuring range:	
Factory setting:	2 ⁴ revolutions
Optionally scalable:	up to 2 ¹⁶ revolutions
DA converter resolution:	12 bit
Singleturn accuracy, at 77 °F 25 °C:	±1 °
Temperature coefficient:	< 100 ppm/K
Repeat accuracy at 77 °F 25 °C:	±0.2 °
Output load:	max. 200 0hm at 10 VDC max. 900 0hm at 24 VDC max. 1200 0hm at 30 VDC
Setting time:	< 1 ms, R _{Load} =900 0hm, 77 °F 25 °C

Rotary Position Technology

Absolute Encoders, Multiturn

Absolute, Multiturn Type RM-97 (Shaft) / RM-98 (Blind Hollow Shaft) Analog

Note: Encoders must be ordered with a clockwise or counterclockwise profile. This determines whether the analog output increases or decreases in the given direction.

Example (output signal profile):

- version 4 - 20 mA
- ⋯ version 0 - 10 V
- - - version 0 - 5 V

Clockwise (CW) version

Scalable version without limit switch function

Example (output signal profile):

- version 4...20 mA
- ⋯ version 0...10 V
- - - version 0...5 V

Counter Clockwise (CCW) version

Scalable version with limit switch function

Note: Factory-set measuring range: 2⁴ revolutions with roll-over

Note: Limit switch function:

version:	0 - 10 V	0 - 5 V	4 - 20 mA
limit switch low:	0.25 V	0.25 V	3.60 mA
limit switch high:	9.75 V	4.75 V	22.00 mA

Mounting advice:

The flanges and shafts of the encoder and drive should not be rigidly coupled together at the same time. We recommend the use of suitable couplings (see page G1, Accessories).

Absolute, Multiturn Type RM-99 (Shaft) / RM-100 (Blind Hollow Shaft)

SSI

Reliable

- Sturdy bearing construction in Bearing-Lock design for resistance against vibration and installation errors.
- Without gear and without battery, thanks to the Energy Harvesting technology

Absolute

Application Oriented

- Absolute accuracy $\pm 1^\circ$.
- Repeat accuracy $\pm 0.2^\circ$.
- Short control cycles, clock frequency with SSI up to 2 MHz.
- Max. resolution 38 bit (14 bit ST + 24 bit MT).

Insensitive

- Reduced number of components ensures magnetic insensitivity.
- IP67 protection and wide temperature range -40°C to $+85^\circ\text{C}$.

Mechanical Characteristics:

Max. speed:	
Shaft or blind hollow shaft version:	6000 RPM
Without shaft seal (IP65):	3000 RPM (continuous)
Shaft or blind hollow shaft version:	4000 RPM
With shaft seal (IP 67):	2000 RPM (continuous)
Starting torque (68 °F 20 °C):	
Without shaft seal (IP65):	< 1.0 oz - in (0.007 Nm)
With shaft seal (IP67):	< 1.4 oz - in (0.01 Nm)
Shaft load capacity:	
Radial:	9 lbs (40 N)
Axial:	4.5 lbs (20 N)
Weight:	approx. 0.44 lbs (0.2 kg)
Protection acc. to EN 60529:	IP65/IP67
Working temperature:	-40 to $+185^\circ\text{F}$ (-40 to $+85^\circ\text{C}$)
Materials:	
Shaft / Hollow shaft:	stainless steel
Flange:	aluminum
Housing:	zinc die-cast
Cable:	PUR
Shock resistance acc. to EN 60068-2-27:	250 g (2,500 m/s ²), 6 ms
Vibration resistance acc. to EN 60068-2-6:	30 g (300 m/s ²), 10 - 2,000 Hz

We reserve the right to make technical alterations without prior notice.

Absolute Encoders

Rotary Position Technology

Absolute Encoders, Multiturn

Absolute, Multiturn Type RM-99 (Shaft) / RM-100 (Blind Hollow Shaft)

SSI

General Electrical Characteristics:

Power supply	10 - 30 VDC
Current consumption (no load):	max. 40 mA,
Reverse polarity protection at power supply (+V):	yes
Short-circuit protected outputs:	yes ¹⁾
e1 compliant acc. to (pending):	EU guideline 2009/19/EC (acc. to EN 55025, ISO 11452 and ISO 7637)
UL approval:	file E356899
CE compliant acc. to:	EMC guideline 2014/30/EU RoHS guideline 2011/65/EU

¹⁾ = short circuit protection to 0V or to output when power supply correctly applied.

Interface Characteristics SSI:

Output driver:	RS485 transceiver type
Permissible load / channel:	max. +/- 30 mA
Signal high:	typ 3.8 V
Signal level low with $I_{Load} = 20$ mA:	typ 1.3 V
Resolution singleturn:	10 - 14 bit
Absolute accuracy ²⁾ :	$\pm 1^\circ$
Repeat accuracy:	$\pm 0.2^\circ$
Number of revolutions (multiturn):	max. 24 bit
Code:	binary or gray
SSI clock rate:	50 kHz - 2 MHz
Data refresh rate:	2 ms
Monoflop time:	$\leq 15 \mu s$

Note: If the clock cycle starts within the monoflop time a second data transfer begins with the same data. If the clock cycle starts after the monoflop time the cycle begins with the new values. The update rate is dependent on the clock speed, data length and monoflop time.

²⁾ = over the entire temperature range.

SET Input:

Input characteristics:	active HIGH
Input type:	comparator
Signal level high:	min. 60% of +V (supply voltage), max: +V
Signal level low:	max. 30% of +V (supply voltage)
Input current:	< 0.5 mA
Min. pulse duration (SET):	10 ms
Input delay:	1 ms
New position data readable after:	1 ms
Internal processing time:	200 ms

The encoder can be set to zero at any position by means of a HIGH signal on the SET input. Other preset values can be factory-programmed. The SET input has a signal processing time of approx. 1 ms, after which the new position data can be read via SSI or BiSS. Once the SET function has been triggered, the encoder requires an internal processing time of typ. 200 ms; during this time the power supply must not be switched off.

The SET function should be carried out while the encoder is at rest.

If this input is not used, it should be connected to 0 V (Encoder ground GND) in order to avoid interferences.

DIR Input:

Direction input: A HIGH signal switches the direction of rotation from the default cw to ccw. This inverted function can also be factory-programmed. If this input is not used, it should be connected to 0 V (Encoder ground GND) in order to avoid interferences.

Response time (DIR input) 1ms

Power-On Delay:

After Power-ON the device requires a time of approx. 150 ms before valid data can be read.

Hot plugging of the encoder should be avoided.

Connection Type:	GND (0 V)	V+	+Clock	-Clock	+Data	- Data	SET	DIR	PE

LSS protocol:	CIA LSS protocol DS305, global command support for node address and baud rate, selective commands via attributes of the identity object
Bootloader:	configuration management CIA DS 302-3

General Information about CANopen

The CANopen encoders support the latest CANopen communication profile according to DS301 V4.02. In addition, device-specific profiles like the encoder profile DS406 V3.2, DS305 (LSS) and DS302 (Bootloader) are available.

The following operating modes may be selected: Polled Mode, Cyclic Mode, Sync Mode. Moreover, scale factors, preset values, limit switch values and many other additional parameters can be programmed via the CANbus. When switching the device on, all parameters, which have been saved on a flash memory to protect them against power failure, are loaded again.

The following output values may be combined in a freely variable way as PDO(PDO mapping): **position, speed, acceleration** as well as the **status of the working area**.

The encoders are available with a connector or a cable connection.

The device address and baud rate can be set/modified by means of the software.

The two-color LED located on the back indicates the operating or fault status of the CAN-bus, as well as the status of the internal diagnostics.

CANbus connection

The CANopen encoders are equipped with a bus trunk line in various lengths or a M12 connector and can be terminated in the device.

The devices do not have an integrated T-coupler nor are they looped internally and must therefore only be used as end devices.

Standard Wiring:

Connection Type:	+V	Common (0 V)	CAN GND	CAN High	CAN Low
Cable:	BN	WH	GY	GN	YE
M12 Eurofast:	2	3	1	4	5

LSS layer setting services DS305 V2.0

- Global support of node-ID and baud rate.
- Selective protocol via identity object (1018h).

CANopen Communication Profile DS301 V4.2

Among others, the following functionality is integrated (Class C2 functionality):

- NMT Slave
- Heartbeat Protocol
- Identity Object
- Error Behavior Object
- Variable PDO Mapping self-start programmable (Power on to operational), 3 Sending PDO's.
- Node address, baud rate and CANbus / programmable termination.

CANopen encoder profile DS406 V4.0

The following parameters can be programmed:

- Event mode, start optional.
- 1 work area with upper and lower limit and the corresponding output states variable PDO mapping for position, speed, work area status, error and acceleration.
- Extended failure management for position sensing.

- User interface with visual display of bus and failure status 1 LED two colors.
- Customer-specific protocol.
- "Watchdog controlled" device.

Bootloader functionality DS302-3

Configuration Management:

- Program download
- Program start
- Program erase

Reverse polarity protection at power supply (+V):	yes
Short-circuit protected outputs:	yes ¹⁾
UL approval:	file E356899
CE compliant acc. to:	EMC guideline 2014/30/EU RoHS guideline 2011/65/EU

Interface Characteristics SAE J1939:

Resolution singleturn:	1 - 16384 (14 bit), scalable default: 16384 (14 bit)
Absolute accuracy ²⁾ :	±1 °
Repeat accuracy:	±0.2 °
Number of revolutions (multiturn):	max. 536,870,912 (29 bit) scalable only via the total resolution
Total resolution:	1...8,796,093,022,208 (43 bit), scalable default: 4,294,967,296 (32 bit)
Interface:	CAN high-speed acc. to ISO 11898, Basic and Full-CAN, CAN specification 2.0 B
Protocol:	SAE J1939
Power-ON time:	< 1200 ms
Baud rate:	250 kbit/s switchable by software to 500 kbit/s
Node address:	software configurable
Termination:	software configurable

¹⁾ = short circuit protected to 0v of to output when power supply currently applied
²⁾ = over the entire temperature range

General Information about SAE J1939

The protocol J1939 originates from the international Society of Automotive Engineers (SAE) and operates on the physical layer with high speed CAN as per ISO11898. The application emphasis lies in the area of the power train and chassis of commercial vehicles. It serves to transfer diagnostic data (for example, motor speed, position, temperature) and control information. Turck SAE J1939 encoders support the total functionality of J1939.

This protocol is a multimaster system with decentralized network management that does not involve channel-based communication.

It supports up to 254 logic nodes and 30 physical control devices per segment. The information is described as parameters (signals) and combined on 4 memory pages (data pages) into parameter groups (PGs). Each parameter group can be identified via a unique number, the parameter group number (PGN). Independently of this, each signal is assigned a unique SPN (suspect parameter number).

The major part of the communication occurs cyclically and can be received by all control devices without the explicit request for data (Broadcast). Furthermore the parameter groups are optimized to a length of 8 data bytes. This enables very efficient utilization of the CAN protocol. If greater amounts of data need to be transferred, then transport protocols (TP) can be used: BAM (broadcast announce message) and CMTD (connection mode data transfer). With BAM TP the transfer of data occurs as a broadcast.

Encoder implementation SAE J1939

- PGNs that are adaptable to the customer's application.
- Resolution of address conflicts -> Address Claiming (ACL).
- Continuous checking whether control addresses have been assigned twice within a network.
- Change of control device addresses during run-time.
- Unique identification of a control device with the help of a name that is unique worldwide. This name serves to identify the functionality of a control device in the network.
- Predefined PGs for position, speed and alarm.
- 250 kbit/s, 29 bit identifier.
- Watchdog controlled device.
- A two-color LED, located on the rear of the encoder, signals the operating and fault status of the J1939 protocol, as well as the status of the internal sensor diagnostics.

Absolute, Multiturn Type RM-117

SSI

General Electrical Characteristics:

Power supply	10 - 30 VDC
Current consumption (no load):	max. 30 mA,
Reverse polarity protection at power supply (+V):	yes
Short-circuit protected outputs:	yes ¹⁾
e1 compliant acc. to (pending):	EU guideline 2009/19/EC (acc. to EN 55025, ISO 11452 and ISO 7637)
UL approval:	file E356899
CE compliant acc. to:	EMC guideline 2014/30/EU RoHS guideline 2011/65/EU

Interface Characteristics SSI:

Output driver:	RS485 transceiver type
Permissible load / channel:	max +/- 30 mA
Signal high:	typ 3.8 V
Signal level low with $I_{Load} = 20 \text{ mA}$:	typ 1.3 V
Resolution singleturn:	10 - 14 bit
Absolute accuracy ²⁾ :	$\pm 1^\circ$
Repeat accuracy:	$\pm 0.2^\circ$
Number of revolutions (multiturn):	max 24 bit
Code:	binary or gray
SSI clock rate:	50 kHz - 2 MHz
Data refresh rate:	2 ms
Monoflop time:	$\leq 15 \mu\text{s}$

Note: If the clock cycle starts within the monoflop time a second data transfer begins with the same data. If the clock cycle starts after the monoflop time the cycle begins with the new values. The update rate is dependent on the clock speed, data length and monoflop time.

SET Input:

Input characteristics:	active HIGH
Input type:	comparator
Signal level high:	min. 60% of +V (power supply), max: +V
Signal level low:	max. 30% of +V (power supply)
Input current:	< 0.5 mA
Min. pulse duration (SET):	10 ms
Input delay:	1 ms
New position data readable after:	1 ms
Internal processing time:	200 ms

The encoder can be set to zero at any position by means of a HIGH signal on the SET input. Other preset values can be factory-programmed. The SET input has a signal processing time of approx. 1 ms, after which the new position data can be read via SSI or BiSS. Once the SET function has been triggered, the encoder requires an internal processing time of typ. 200 ms; during this time the power supply must not be switched off.

The SET function should be carried out while the encoder is at rest.

If this input is not used, it should be connected to 0 V (Encoder ground GND) in order to avoid interferences.

DIR Input:

Direction input: A HIGH signal switches the direction of rotation from the default cw to ccw. This inverted function can also be factory-programmed.

If this input is not used, it should be connected to 0 V (Encoder ground GND) in order to avoid interferences.

Response time (DIR input) 1ms

Power-On Delay:

After Power-ON the device requires a time of approx. 150 ms before valid data can be read.

Hot plugging of the encoder should be avoided.

¹⁾ = short circuit protected to 0V or to output when power supply correctly applied.
²⁾ = over the entire temperature range.

We reserve the right to make technical alterations without prior notice.

General Information about CANopen

The CANopen encoders support the latest CANopen communication profile according to DS301 V4.02. In addition, device-specific profiles like the encoder profile DS406 V3.2, DS305 (LSS) and DS302 (Bootloader) are available.

The following operating modes may be selected: Polled Mode, Cyclic Mode, Sync Mode. Moreover, scale factors, preset values, limit switch values and many other additional parameters can be programmed via the CANbus. When switching the device on, all parameters, which have been saved on a flash memory to protect them against power failure, are loaded again.

The following output values may be combined in a freely variable way as PDO(PDO mapping): **position, speed, acceleration** as well as the **status of the working area**.

The encoders are available with a connector or a cable connection.

The device address and baud rate can be set/modified by means of the software.

The two-color LED located on the back indicates the operating or fault status of the CAN-bus, as well as the status of the internal diagnostics.

CANbus connection

The CANopen encoders are equipped with a bus trunk line in various lengths or a M12 connector and can be terminated in the device.

The devices do not have an integrated T-coupler nor are they looped internally and must therefore only be used as end devices.

Standard Wiring:

Connection Type:	+V	Common (0V)	CAN GND	CAN High	CAN Low
Cable:	BN	WH	GY	GN	YE
M12 Eurofast:	2	3	1	4	5

Interface Characteristics CANopen:

Code:	binary
Interface:	CAN high-speed acc. to ISO 11898, Basic- and Full-CAN, CAN specification 2.0 B
Protocol:	CANopen profile DS406 V4.0 with manufacturer-specific add-ons, LSS-Service, bootloader
Power-ON time:	< 1200 ms
SDO timeout:	< 1000 ms
Baud rate:	10 - 1000 kbit/s software configurable
Node address:	1 - 127 software configurable
Termination:	software configurable
LSS protocol:	CIA LSS protocol DS305, global command support for node address and baud rate, selective commands via attributes of the identity object
Bootloader:	configuration management CIA DS 302-3

¹⁾ = short circuit protected to 0v or to output when power supply correctly applied.
²⁾ = over the entire temperature range.

LSS layer setting services DS305 V2.0

- Global support of node-ID and baud rate
- Selective protocol via identity object (1018h)

CANopen Communication Profile DS301 V4.2

Among others, the following functionality is integrated. (Class C2 functionality):

- NMT Slave
- Heartbeat Protocol
- Identity Object
- Error Behavior Object
- Variable PDO Mapping self-start programmable (Power on to operational), 3 Sending PDO's
- Node address, baud rate and CANbus / programmable termination

CANopen encoder profile DS406 V4.0

The following parameters can be programmed:

- Event mode, start optional
- 1 work area with upper and lower limit and the corresponding output states variable PDO mapping for position, speed, work area status, error and acceleration

- Extended failure management for position sensing
- User interface with visual display of bus and failure status 1 LED two colors
- Customer-specific protocol
- "Watchdog controlled" device

Bootloader functionality DS302-3

Configuration Management:

- Program download
- Program start
- Program erase

General Information about SAE J1939

The protocol J1939 originates from the international Society of Automotive Engineers (SAE) and operates on the physical layer with high speed CAN as per ISO11898. The application emphasis lies in the area of the power train and chassis of commercial vehicles. It serves to transfer diagnostic data (for example, motor speed, position, temperature) and control information. Turck SAE J1939 encoders support the total functionality of J1939.

This protocol is a multimaster system with decentralized network management that does not involve channel-based communication.

It supports up to 254 logic nodes and 30 physical control devices per segment. The information is described as parameters (signals) and combined on 4 memory pages (data pages) into parameter groups (PGs). Each parameter group can be identified via a unique number, the parameter group number (PGN). Independently of this, each signal is assigned a unique SPN (suspect parameter number).

The major part of the communication occurs cyclically and can be received by all control devices without the explicit request for data (Broadcast). Furthermore the parameter groups are optimized to a length of 8 data bytes. This enables very efficient utilization of the CAN protocol. If greater amounts of data need to be transferred, then transport protocols (TP) can be used: BAM (broadcast announce message) and CMTD (connection mode data transfer). With BAM TP the transfer of data occurs as a broadcast.

Encoder implementation SAE J1939

- PGNs that are adaptable to the customer's application.
- Resolution of address conflicts -> Address Claiming (ACL).
- Continuous checking whether control addresses have been assigned twice within a network.
- Change of control device addresses during run-time.
- Unique identification of a control device with the help of a name that is unique worldwide. This name serves to identify the functionality of a control device in the network.
- Predefined PGs for position, speed and alarm.
- 250 kbit/s, 29 bit identifier.
- Watchdog controlled device.
- A two-color LED, located on the rear of the encoder, signals the operating and fault status of the J1939 protocol, as well as the status of the internal sensor diagnostics.

Short-circuit protected outputs:	yes ¹⁾
UL approval:	file E356899
CE compliant acc. to:	EMC guideline 2014/30/EU RoHS guideline 2011/65/EU

Interface Characteristics SSI:

Output driver:	RS485 transceiver type
Permissible load / channel:	max +/- 30 mA
Signal high:	typ 3.8 V
Signal level low with $I_{Load} = 20 \text{ mA}$:	typ 1.3 V
Resolution singleturn:	10 - 14 bit
Absolute accuracy ²⁾ :	$\pm 1^\circ$
Repeat accuracy:	$\pm 0.2^\circ$
Number of revolutions (multiturn):	max 24 bit
Code:	binary or gray
SSI clock rate:	50 kHz - 2 MHz
Data refresh rate:	2 ms
Monoflop time:	$\leq 15 \mu\text{s}$

Note: If the clock cycle starts within the monoflop time a second data transfer begins with the same data. If the clock cycle starts after the monoflop time the cycle begins with the new values. The update rate is dependent on the clock speed, data length and monoflop time.

SET Input:

Input characteristics:	active HIGH
Input type:	comparator
Signal level high:	min. 60% of +V (power supply), max: +V
Signal level low:	max. 30% of +V (power supply)
Input current:	< 0.5 mA
Min. pulse duration (SET):	10 ms
Input delay:	1 ms
New position data readable after:	1 ms
Internal processing time:	200 ms

The encoder can be set to zero at any position by means of a HIGH signal on the SET input. Other preset values can be factory-programmed. The SET input has a signal processing time of approx. 1 ms, after which the new position data can be read via SSI or BiSS. Once the SET function has been triggered, the encoder requires an internal processing time of typ. 200 ms; during this time the power supply must not be switched off.

The SET function should be carried out while the encoder is at rest.

If this input is not used, it should be connected to 0 V (Encoder ground GND) in order to avoid interferences.

DIR Input:

Direction input: A HIGH signal switches the direction of rotation from the default cw to ccw. This inverted function can also be factory-programmed.

If this input is not used, it should be connected to 0 V (Encoder ground GND) in order to avoid interferences.

Response time (DIR input) 1 ms

Power-On Delay:

After Power-ON the device requires a time of approx. 150 ms before valid data can be read.

Hot plugging of the encoder should be avoided.

¹⁾ = when power supply is currently applied
²⁾ = over the entire temperature range

Bootloader:	configuration management CIA DS 302-3

¹⁾ = short circuit protected to 0v of to output when power supply currently applied
²⁾ = over the entire temperature range

General Information about CANopen

The CANopen encoders support the latest CANopen communication profile according to DS301 V4.02. In addition, device-specific profiles like the encoder profile DS406 V3.2, DS305 (LSS) and DS302 (Bootloader) are available.

The following operating modes may be selected: Polled Mode, Cyclic Mode, Sync Mode. Moreover, scale factors, preset values, limit switch values and many other additional parameters can be programmed via the CANbus. When switching the device on, all parameters, which have been saved on a flash memory to protect them against power failure, are loaded again.

The following output values may be combined in a freely variable way as PDO(PDO mapping): **position, speed, acceleration** as well as the **status of the working area**.

The encoders are available with a connector or a cable connection.

The device address and baud rate can be set/modified by means of the software.

The two-color LED located on the back indicates the operating or fault status of the CAN-bus, as well as the status of the internal diagnostics.

CANbus connection

The CANopen encoders are equipped with a bus trunk line in various lengths or a M12 connector and can be terminated in the device.

The devices do not have an integrated T-coupler nor are they looped internally and must therefore only be used as end devices.

Standard Wiring:

Connection Type:	+V	Common (0 V)	CAN GND	CAN High	CAN Low
Cable:	BN	WH	GY	GN	YE
M12 Eurofast:	2	3	1	4	5

LSS layer setting services DS305 V2.0

- Global support of node-ID and baud rate configuration.
- Selective protocol via identity object (1018h)

CANopen Communication Profile DS301 V4.2

Among others, the following functionality is integrated. (Class C2 functionality):

- NMT Slave
- Heartbeat Protocol
- Identity Object
- Error Behavior Object
- Variable PDO Mapping self-start programmable (Power on to operational), 3 Sending PDO's
- Node address, baud rate and CANbus / programmable termination

- Extended failure management for position sensing
- User interface with visual display of bus and failure status 1 LED two colors
- Customer-specific protocol
- "Watchdog controlled" device

Bootloader functionality DS302-3

Configuration Management:

- Program download
- Program start
- Program erase

CANopen encoder profile DS406 V4.0

The following parameters can be programmed:

- Event mode, start optional
- 1 work area with upper and lower limit and the corresponding output states
- Variable PDO mapping for position, speed, work area status, error and acceleration

¹⁾ = short circuit protected to 0v of to output when power supply currently applied
²⁾ = over the entire temperature range

General Information about SAE J1939

The protocol J1939 originates from the international Society of Automotive Engineers (SAE) and operates on the physical layer with high speed CAN as per ISO11898. The application emphasis lies in the area of the power train and chassis of commercial vehicles. It serves to transfer diagnostic data (for example, motor speed, position, temperature) and control information. Turck SAE J1939 encoders support the total functionality of J1939.

This protocol is a multimaster system with decentralized network management that does not involve channel-based communication.

It supports up to 254 logic nodes and 30 physical control devices per segment. The information is described as parameters (signals) and combined on 4 memory pages (data pages) into parameter groups (PGs). Each parameter group can be identified via a unique number, the parameter group number (PGN). Independently of this, each signal is assigned a unique SPN (suspect parameter number).

The major part of the communication occurs cyclically and can be received by all control devices without the explicit request for data (Broadcast). Furthermore the parameter groups are optimized to a length of 8 data bytes. This enables very efficient utilization of the CAN protocol. If greater amounts of data need to be transferred, then transport protocols (TP) can be used: BAM (broadcast announce message) and CMTD (connection mode data transfer). With BAM TP the transfer of data occurs as a broadcast.

Encoder implementation SAE J1939

- PGNs that are adaptable to the customer's application.
- Resolution of address conflicts -> Address Claiming (ACL).
- Continuous checking whether control addresses have been assigned twice within a network.
- Change of control device addresses during run-time.
- Unique identification of a control device with the help of a name that is unique worldwide. This name serves to identify the functionality of a control device in the network.
- Predefined PGs for position, speed and alarm.
- 250 kbit/s, 29 bit identifier.
- Watchdog controlled device.
- A two-color LED, located on the rear of the encoder, signals the operating and fault status of the J1939 protocol, as well as the status of the internal sensor diagnostics.

Absolute, Multiturn Type RM-46 (Shaft) / RM-50 (Blind / Hollow Shaft)

SSI/BiSS-C

Reliable

- **Increased ability to withstand vibration and installation errors.** Sturdy Bearing-Lock design structure eliminates machine downtime and repairs.
- **Fewer components and connection points increase the operational reliability:** Turck OptoASIC technology with highest integration density (Chip-on-Board).
- Die cast housing and protection up to IP67: **Remains sealed even when subjected to harsh everyday use.**
- Wide temperature range of -40 to +194 °F (-40 to +90 °C).
- **Easy diagnosis in case of fault condition.** Status indication by means of LED, sensor, voltage and temperature monitoring.

Absolute

Versatile

- **Connections for every application:** Tangential cable.
- **Open interfaces ensure flexibility and independence:** SSI or BiSS-C with Sine-Cosine-Option incremental track RS422.
- Multiple mounting brackets for easy installation.
- **Compact design.**
- **Fast and easy start-up on site:** Preset and reversal of rotation direction by control inputs.
- **Direct mounting on standard diameter shafts up to 10 mm** through hollow shaft up to 8 mm.

Fast

- **High accuracy:** Update rate of the whole position value above 100 kHz for a max. jitter of 1 μs (real-time).
- **High productivity due to very short regulation cycles:** Clock rate with SSI up to 2 MHz, with BiSS-C up to 10 MHz.
- **High-resolution feedback system achievable in real-time:** SinCos incremental outputs.

Mechanical Characteristics:

Max. speed, shaft or blind hollow shaft version without shaft sealing (IP65):	12,000 RPM, continuous operation 10,000 RPM
Max. speed, shaft version (IP67) or blind hollow shaft (IP65) with shaft sealing:	10,000 RPM, continuous operation 8,000 RPM
Starting torque without shaft sealing:	< 1 oz-in (< 0.007 Nm)
Starting torque with shaft sealing:	< 1.4 oz-in (< 0.01 Nm)
Radial load capacity of shaft:	9 lbs (40 N)
Axial load capacity of shaft:	4.5 lbs (20 N)
Weight:	approx. 0.44 lbs (0.2 kg)

Protection acc. to EN 60 529:	Housing: IP67, Shaft: IP65, opt. IP67
Working temperature:	-40 to +194 °F (-40 to +90 °C)
Materials:	Shaft/Hollow shaft: stainless steel, Flange: aluminum, Housing: die cast zinc, Cable: PUR
Shock resistance acc. to DIN-IEC 68-2-27:	> 250 g (> 2,500 m/s ²), 6 ms
Vibration resistance acc. to DIN-IEC 68-2-6:	> 10 g (>100 m/s ²), 55-2,000 Hz

General Electrical Characteristics:

Supply voltage:	5 VDC ±5% or 10-30 VDC
Current consumption (without output load):	5 VDC: max. 60 mA, 10-30 VDC: max. 30 mA
Reverse polarity protection at power supply (+V):	Yes
RoHS compliant acc. to EU guideline 2011/65/EU	
UL approval:	file E356899

Output driver:	RS485 transceiver type
Permissible load/channel:	max. ± 30 mA
Signal level high:	typ. 3.8 V
Signal level low at I _{load} = 20 mA:	typ. 1.3 V
Short-circuit protected:	yes ¹⁾

Interface Characteristics SSI:

Singleturn resolution:	10-17 bit
Number of revolutions:	Max. 24 bit
Code:	binary or gray
SSI clock rate:	≤ 14 bit: 50 kHz-2 MHz / ≥ 15 bit: 50 kHz-125 kHz
Monoflop time:	≤ 15 μs

Date refresh rate:	Up to 14 bits, ≤ 1 μs Up to 15-17 bits, 4 μs
Status and Parity bit:	Optional on request

Note: If clock starts cycling within monoflop time, a second data transfer starts with the same data. If clock starts cycling after monoflop time, the data transfer starts with updated values. Max. update rate is dependent on clock speed, data length and monoflop time.

¹⁾ Short-circuit to 0V or to output, one channel at a time, supply voltage correctly applied

Rotary Position Technology

Absolute Encoders, Multiturn

Absolute, Multiturn Type RM-46 (Shaft) / RM-50 (Blind / Hollow Shaft)

SSI/BiSS-C

Interface Characteristics BiSS-C:

Singleturn resolution:	10-17 bit
Number or revolutions:	Max. 24 bit
Code:	Binary
Clock rate:	up to 10 MHz
Max. update rate:	< 10 μ s, depending on clock speed and data length
Data refresh rate:	\leq 1 μ s
Note: Bidirectional, programmable parameters are: resolution, code, direction, alarms and warnings; Multicycle data output (e.g., for temperature); CRC data verification	

Incremental Output (A/B). 2048 PPR:

	Sin/Cos	RS422 Compatible
Max. -3dB frequency:	400 kHz	400 kHz
Signal level:	1 Vpp (\pm 20%)	High: min. 2.5 V Low: max. 0.5 V
Short-circuit proof:	yes ¹⁾	yes ¹⁾

¹⁾ Short-circuit to 0V or to output, one channel at a time, supply voltage correctly applied

Status Output and LED:

Output driver:	open collector, internal pull up resistor 22 kOhm
Permissible load:	Max. 20 mA
Signal level high:	+V
Signal level low:	< 1 V
Active at:	Low

The optional LED (red) and the status output serve to display various alarm or error messages. In normal operation, the LED is OFF and the status output is HIGH (open-collector with int. pull-up 22 k).

If the LED is ON (status output LOW) this indicates: Sensor error, singleturn or multiturn (soiling, glass breakage etc.); LED error, failure or aging; Over temperature; Under voltage.
In the SSI mode, the fault indication can only be reset by switching off the power-supply to the device.

Standard Wiring:

Connection Type:	GND	+V	+Clock	-Clock	+Data	-Data	A	A inv	B	B inv	PE
Cable:	WH	BN	GN	YE	GY	PK	BK	VT	GY/PK	RD/BU	Shield

SET Input:

Input characteristics:	active HIGH
Input type:	comparator
Signal level high:	min. 60% of V+ (supply voltage), max: V+
Signal level low:	max. 30% of V+ (supply voltage)
Input current:	< 0.5 mA
Min. pulse duration (SET):	10 ms
Input delay:	1 ms
New position data readable after:	1 ms
Internal processing time:	200 ms
The encoder may be set to zero at any position by means of a HIGH signal on the SET input or by pressing the optional SET key. Other preset values may be factory programmed. The SET input has a signal delay time of approximately 1 ms. Once the SET function has been triggered, the encoder requires an internal processing time of approximately 200 ms before the new position data can be read. During this time the LED is ON and the status output is at LOW.	
Response time (DIR input)	1 ms

DIR Input:

A HIGH signal switches the direction of rotation from the default CW to CCW. This inverted function can also be factory-programmed. If DIR is changed when the device is already switched on, then this will be interpreted as an error. The LED will come ON and the status output will switch to LOW.

Power-On Delay:

After Power-ON the device requires a time of approx. 150 ms before valid data can be read.

Wiring Diagrams:

* Length in meters.

CANopen

Rugged

- Electronic multiturn is 100% magnetic-field resistant.
- Sturdy bearing construction in Bearing-Lock design for resistance against vibration and installation errors.
- Wide temperature range: -40 to +185 °F (-40 to +85 °C).

Absolute

CANopen

Versatile

- CANopen with current encoder profile.
- LSS services for configuration of the node address and baud rate.
- Variable PDO mapping in the memory.
- Universal scaling function.

Compact

- **Overall size of 36 x 42 mm:**
Hollow shaft of up to 8 mm,
blind hollow shaft of up to 10 mm.

Mechanical Characteristics:

Max. speed:	12,000 RPM, continuous operation 10,000 RPM
Shaft or blind hollow shaft without shaft sealing (IP65):	10,000 RPM, continuous operation 8,000 RPM
Shaft version (IP67) or blind hollow shaft (IP65) with shaft sealing:	
Starting torque without shaft sealing:	< 1 oz-in (< 0.007 Nm)
Starting torque with shaft sealing:	< 1.4 oz-in (< 0.01 Nm)
Radial load capacity of shaft:	9 lbs (40 N)
Axial load capacity of shaft:	4.5 lbs (20 N)
Weight:	approx. 0.44 lbs (0.2 kg)
Protection acc. to EN 60 529:	Housing: IP67 Shaft: IP65, opt. IP67
Working temperature:	-40 to +185 °F (-40 to +85 °C)
Materials:	Shaft/Hollow shaft: stainless steel, Flange: aluminum, Housing: die cast zinc, Cable: PUR
Shock resistance acc. to DIN-IEC 68-2-27:	> 250 g (> 2,500 m/s ²), 6 ms
Vibration resistance acc. to DIN-IEC 68-2-6:	> 10 g (>100 m/s ²), 55-2,000 Hz

Diagnostic LED (two-color, red/green):

LED ON or blinking:	red: error display green: status display
---------------------	---

General Electrical Characteristics:

Supply voltage:	10-30 VDC
Current consumption (no load):	Max. 80 mA
Reverse connection of the supply voltage (+V):	yes
RoHS compliant acc. to EG-guideline 2011/65/EU	
UL approval:	file E356899

Interface Characteristics CANopen:

Resolution Singleturn:	1-65536 (16 bit), scaleable: 1-65536
Default value Singleturn:	8192 (13 bit)
Total resolution:	1-4.294.967.296 (32 bit); Default: 25 bit
Code:	Binary
Interface:	CAN High-Speed according to ISO 11898, Basic- and Full-CAN, CAN Specification 2.0 B
Protocol:	CANopen profil DS 406 V3.2 with manufacturer specific add-ons LSS-Service DS305 V2.0
Baud rate:	10-1000 kbit/s (software configurable)
Node address:	1-127 (software configurable)
Termination switchable:	Software configurable
LSS Protocol	CIA LSS protocol DS305 Global command support for node address and baud rate. Selective commands via attributes of the identity object

Rotary Position Technology

Absolute Encoders, Multiturn

Absolute, Multiturn Type RM-47 (Shaft) / RM-51 (Blind Hollow Shaft)

CANopen

General Information about CANopen

The CANopen encoders support the latest CANopen communication profile according to DS 301 V4.02. In addition, device specific profiles, like the DS 406 V3.2, are available.

The following operating modes may be selected: Polled Mode, Cyclic Mode, Sync Mode. Moreover, scale factors, preset values, limit switch values and many other additional parameters can be programmed via the CANbus. When switching the device on, all parameters, which have been saved on a flash memory to protect them against power failure, are loaded again. Position, speed and status of the working area output values may be combined in a freely variable way as PDO mapping.

The encoders are available with a cable connection. The device address and baud rate may be set/modified by means of the software. A two-color LED indicates the operating or fault status of the CANbus, as well as the status of the internal diagnostics.

CANopen Communication Profile DS301 V4.02

The following Class C2 functionality is integrated:

- NMT Slave
- Heartbeat Protocol
- Identity Object
- Error Behavior Object
- Variable PDO Mapping self-start programmable (Power on to operational), 3 sending PDO's
- Node address, baud rate and CANbus/programmable termination

CANopen Encoder Profile DS406 V3.2

The following parameters may be programmed:

- Event mode
- One work area with upper and lower limit and the corresponding output states
- Variable PDO mapping for position, speed, work area status
- Extended failure management for position sensing
- User interface with visual display of bus and failure status: 1 LED, two-color
- Customer-specific memory - 16 Bytes
- "Watchdog controlled" device

LSS Layer Setting Services DS305 V2.0

- Global support of Node-ID and baud rate
- Selective protocol via identity object (1018h)

Universal scaling function

At the end of the physical resolution of an encoder, when scaling is active, an error appears if the division of the physical limit (GP_U) by the programmed total resolution (TMR) does not produce an integer. The universal scaling function remedies this problem.

Standard Wiring:

Connection Type:	+V	0 V	CAN GND	CAN High	CAN Low

SSI/BiSS-C

Reliable

- **Increased ability to withstand vibration and installation errors.** Sturdy Bearing-Lock design structure eliminates machine downtime and repairs.
- **Fewer components and connection points increase the operational reliability:** Turck OptoASIC technology with highest integration density (Chip-on-Board).
- Die cast housing and protection up to IP67: **Remains sealed even when subjected to harsh everyday use.**
- Wide temperature range.
- **Easy diagnosis in case of fault condition.** Status indication by means of LED, sensor, voltage and temperature monitoring.

Absolute

Versatile

- **Connections for every application:** M12, M23 and cable connector.
- **Open interfaces ensure flexibility and independence:** SSI or BiSS-C with Sine-Cosine-Option incremental track RS422.
- Multiple mounting brackets for easy installation.
- Status LED and set key available.
- **Quick, simple on site start-up:** Set key or preset by means of a control input.

Fast

- **High accuracy:** Update rate of the whole position value above 100 kHz.
- **High productivity due to very short regulation cycles:** Clock rate with SSI up to 2 MHz, with BiSS-C up to 10 MHz.
- **High-resolution feedback system achievable in real-time:** SinCos incremental outputs.

Mechanical Characteristics:

Shaft version:	
Max. speed without shaft sealing (IP65) up to 158 °F (70 °C):	12,000 RPM, continuous 10,000 RPM
Max. speed without shaft sealing (IP65) up to Tmax:	8,000 RPM, continuous 5,000 RPM
Max. speed with shaft sealing (IP67) up to 158 °F (70 °C):	11,000 RPM, continuous 9,000 RPM
Max. speed with shaft sealing (IP67) up to Tmax:	8,000 RPM, continuous 5,000 RPM
Hollow shaft version:	
Max. speed without shaft sealing (IP65) up to 158 °F (70 °C):	9,000 RPM, continuous 6,000 RPM
Max. speed without shaft sealing (IP65) up to Tmax:	6,000 RPM, continuous 3,000 RPM
Max. speed with shaft sealing (IP67) up to 158 °F (70 °C):	8,000 RPM, continuous 4,000 RPM
Max. speed with shaft sealing (IP67) up to Tmax:	4,000 RPM, continuous 2,000 RPM
Starting torque without shaft seal (IP65):	Shaft version: < 1.4 oz-in (< 0.01 Nm) Hollow shaft version: < 4.25 oz-in (< 0.03 Nm)
Starting torque with shaft seal (IP67):	< 7 oz-in (< 0.05 Nm)
Moment of inertia:	Shaft version: 0.219 oz-in ² (4.0 x 10 ⁻⁶ kgm ²) Hollow shaft version: 0.383 oz-in ² (7.0 x 10 ⁻⁶ kgm ²)
Radial load capacity of shaft:	18 lbs (80 N)
Axial load capacity of shaft:	9 lbs (40 N)
Weight:	approx. 1 lb (0.45 kg)
Protection acc. to EN 60 529:	Housing: IP67, Shaft: IP65, opt. IP67
Working temperature:	-40 to +194 °F (-40 to +90 °C) ¹⁾
Materials:	Shaft: stainless steel, Flange: aluminum, Housing: die cast zinc, Cable: PVC
Shock resistance acc. to DIN-IEC 68-2-27:	> 250 g (> 2,500 m/s ²), 6 ms
Vibration resistance acc. to DIN-IEC 68-2-6:	> 10 g (> 100 m/s ²), 55-2,000 Hz

¹⁾ Cable versions: -22 to +167 °F (-30 to +75 °C)

General Electrical Characteristics:

Supply voltage:	5 VDC +5% or 10-30 VDC
Current consumption (without output load):	5 VDC: max. 80 mA, 10-30 VDC: max. 50 mA
Reverse polarity protection at power supply (+V):	Yes (only 10-30 VDC)
RoHS compliant according to EU guideline 2011/65/EU	
UL approval:	file E356899

General Interface Characteristics:

Output driver:	RS485 Transceiver type
Permissible load/channel:	max. 20 mA
Signal level high:	typ. 3.8 V
Signal level low at	typ. 1.3 V, $I_{load} = 20 \text{ mA}$:
Short-circuit protected:	Yes ¹⁾

Interface Characteristics SSI:

Singleturn resolution:	10-14 bits and 17 bits ²⁾
Number of revolutions:	4096 (12 bits)
Code:	Binary or Gray
SSI clock rate:	≤ 14 bits: 50 kHz-2 MHz ≥ 15 bits: 50 kHz -125kHz
Monoflop time:	≥ 15 μs

Note:
If clock starts cycling within monoflop time, a second data transfer starts with the same data. If clock starts cycling after monoflop time, the data transfer starts with updated values. The update rate is dependent on clock speed, data length and monoflop time.

Data refresh rate:	< 1 μs up to 14 bits, 4 μs for 15-17 bits
Status and Parity bit:	optional on request

Interface Characteristics BiSS-C:

Singleturn resolution:	10-14 bits and 17 bits, customer programmable ²⁾
Number of revolutions:	4096 (12 bits)
Code:	Binary
Clock rate:	up to 10 MHz
Max. update rate:	< 10 μs, depending on clock rate and data length
Data refresh rate:	≤ 1 μs

Note:
- Bidirectional, programmable parameters are: resolution, code, direction, alarms and warnings
- Multicycle data output (e.g., for temperature)
- CRC data verification

¹⁾ Short-circuit to 0 V or to output, one channel at a time, supply voltage correctly applied

²⁾ Other options upon request

SET (zero or defined value) and Direction (CW/CCW) Control Inputs

Input:	High active
Input type:	Comparator
Signal level high:	min. 60% of V+ (Supply voltage), max: V+
Signal level low:	max. 25% of V+ (Supply voltage)
Input current:	< 0.5 mA
Min. pulse duration (SET):	10 ms
Timeout after SET input:	14 ms
Reaction Time (DIR input):	1 ms

The encoder can be set to zero at any position by means of a HIGH signal on the SET input or by pressing the optional SET key. Other preset values may be factory programmed. The SET input has a signal delay time of approximately 1 ms. Once the SET function has been triggered, the encoder requires an internal processing time of approximately 15 ms before the new position data can be read. During this time the LED is ON and the status output is at LOW.

Status Output and LED

Output driver:	Open collector, internal pull up resistor 22 kOhm
Permissible load:	Max. 20 mA
Signal level high:	+V
Signal level low:	< 1 V
Active at:	Low

The optional LED (red) and the status output serve to display various alarm or error messages. In normal operation the LED is OFF and the status output is HIGH (open-collector with int. pull-up 22 k).

If the LED is ON (status output LOW) this indicates:
- Sensor error, singleturn or multiturn (soiling, glass breakage etc.)
- LED error, failure or aging
- Over- or under-temperature

In the SSI mode, the fault indication can only be reset by switching off the power-supply to the device.

DIR Input

A HIGH signal switches the direction of rotation from the default CW to CCW. This inverted function can also be factory-programmed. If direction is changed when the device is already switched on, then this will be interpreted as an error. The LED will come ON and the status output will switch to LOW.

Power-On Delay

After Power-ON the device requires a time of approx. 150 ms before valid data can be read.

Option Incremental Output (A/B), 2048 PPR:

	SinCos	RS422 TTL-compatible
-3dB frequency:	400 kHz	400 kHz
Signal level:	1 Vpp (+ 20%)	High: min. 2.5 V Low: max. 0.5 V
Short-circuit proof:	Yes	Yes

Absolute, Multiturn Type RM-28 (Shaft) / RM-35 (Hollow Shaft)

CANopen/CANlift

Reliable

- **Increased ability to withstand vibration and installation errors.** Sturdy Bearing-Lock design structure eliminates machine downtime and repairs.
- **Fewer components and connection points increase the operational reliability:** Turck OptoASIC technology with highest integration density (Chip-on-Board).
- Die cast housing and protection up to IP67: **Remains sealed even when subjected to harsh everyday use.**
- Wide temperature range.

Absolute

CANopen

Fast

- **Real time-servo position detection of several axes:** Extended CAN Sync Mode with realtime position acquisition.
- **Fast data availability, while reducing the load on the bus and the controller:** Intelligent functions like the transmission of speed, acceleration or exiting a working area.

Versatile

- CANopen, CANlift fieldbus with the latest profiles.
- **Connections for every application:** Bus terminal cover with M12 connector or fixed connection with M12, M23 or D-Sub connector. Point-to-point connections also available.
- **Real-time data: Position, speed or working area.** Variable PDO mapping in the memory.
- **Fast, error-free start-up, without setting any switches.** Node address, baud rate and termination can be programmed via the bus.
- Direct mounting of hollow shaft on large diameter standard shafts; up to 15 mm for blind hollow shaft.

Mechanical Characteristics:

Max. speed without shaft sealing (IP65) up to 158 °F (70 °C):	9,000 RPM, continuous 7,000 RPM
Max. speed without shaft sealing (IP65) up to Tmax:	7,000 RPM, continuous 4,000 RPM
Max. speed with shaft sealing (IP67) up to 158 °F (70 °C):	8,000 RPM, continuous 6,000 RPM
Max. speed with shaft sealing (IP67) up to Tmax:	6,000 RPM, continuous 3,000 RPM
Starting torque without shaft seal (IP65):	1.4 oz-in (< 0.01 Nm)
Starting torque with shaft seal (IP67):	4.25 oz-in (< 0.03 Nm)
Moment of inertia:	Shaft version: 0.219 oz-in ² (4.0 x 10 ⁻⁶ kgm ²) Hollow shaft version: 0.41 oz-in ² (7.5 x 10 ⁻⁶ kgm ²)
Radial load capacity of shaft:	18 lbs (80 N)
Axial load capacity of shaft:	9 lbs (40 N)
Weight:	approx. 1.26 lbs (0.57 kg) with bus terminal cover approx. 1.15 lbs (0.52 kg) with fixed connection
Protection acc. to EN 60 529:	Housing: IP67, Shaft: IP65, opt. IP67
Working temperature:	-40 to +176 °F (-40 to +80 °C) ¹⁾
Materials:	Shaft: stainless steel, Flange: aluminum, Housing: die cast zinc, Cable: PVC
Shock resistance acc. to DIN-IEC 68-2-27:	> 250 g (> 2,500 m/s ²), 6 ms
Vibration resistance acc. to DIN-IEC 68-2-6:	> 10 g (> 100 m/s ²), 55-2,000 Hz

¹⁾ Cable versions: -22 to +167 °F (-30 to +75 °C)

- Safe operation in strong magnetic fields
- Special gears with specific toothings

Rotary Position Technology

Absolute Encoders, Multiturn

Absolute, Multiturn Type RM-29 (Shaft) / RM-36 (Blind Hollow Shaft)

CANopen/CANlift

General Electrical Characteristics:

Supply voltage:	10-30 VDC
Current consumption (w/o output load):	Max. 100 mA
Reverse polarity protection:	Yes
RoHS compliant acc. to EU guideline 2011/65/EU	
UL approval:	file E356899

SET Control Button (zero or defined value, option)

Protected against accidental activation, can only be depressed with the tip of a ballpoint pen or similar.

Diagnostic LED (yellow)

LED on with: optical sensor path faulty (code error, LED error), low voltage and over-temperature

Incremental Track Characteristics:

Output driver:	RS422 (TTL-compatible)
Permissible load/channel:	Max. 20 mA
Signal level:	High typ. 3.8 V Low typ. 1.3 V
Short circuit protected:	Yes ¹⁾
Resolution:	2048 ppr

¹⁾ Short circuit to OV or to output, only one channel at a time, supply voltage correctly applied.

Interface Characteristics CANopen/CANlift:

Singleturn resolution (max, scalable):	1-65536 (16 bits), default scale value is set to 8192 (13 bits)
Total resolution:	1-268 435 456 (28 Bit) Default: 25 bit
Code:	Binary
Interface:	CAN High-Speed according ISO 11898, Basic and Full-CAN CAN Specification 2.0 B

Protocol:	CANopen profile DS 406 V3.2 with manufacturer-specific add-on's or CANlift profile DS 417 V1.1
Baud rate:	10-1000 kbits/s (set by DIP switches/software configurable)
Node address:	1-127 (set by rotary switches/software configurable)
Termination switchable:	Set by DIP switches (software configurable)

General Information about CAN/CANlift

The CANopen encoders support the latest CANopen communication profile according to DS 301 V4.02. In addition, device-specific profiles, like the DS 406 V3.2 and DS 417 V1.1 (for lift applications), are available. The following operating modes may be selected: Polled Mode, Cyclic Mode, Sync Mode and a High Resolution Sync Protocol. Moreover, scale factors, preset values, limit switch values and many other additional parameters may be programmed via the CANopen fieldbus. When switching the device on, all parameters, which have been saved on an EEPROM to protect them against power failure, are loaded again.

Position, speed, acceleration and status output values may be combined in a freely variable way as PDO mapping.

Encoders with a connector or a cable connection are available. Models with bus terminal cover and integrated T-shaped coupler allow a particularly easy installation via M12 connectors. The device address is set by means of two hexadecimal rotary switches. Furthermore, another DIP switch allows setting the baud rate and switching on a termination resistor. Three LEDs indicate the operating or fault status of the CANopen fieldbus, as well as the status of an internal diagnostics.

CANopen Communication Profile DS 301 V4.02

The following functionality is integrated: Class C2 Functionality • NMT Slave • Heartbeat Protocol • High Resolution Sync Protocol • Identity Object • Error Behavior Object • Variable PDO Mapping • Self-start programmable (power on to operational) • Three Sending PDO's • Node address, baud rate and CANbus • Programmable termination

CANopen Encoder Profile DS 406 V3.2

The following parameters may be programmed:

- Event mode
- Units for speed selectable (Steps/Sec or RPM)
- Factor for speed calculation (e.g. measuring wheel circumference)
- Integration time for speed value of 1 to 32
- Two work areas with 2 upper and lower limits and the corresponding output states
- Variable PDO mapping for position, speed, acceleration and work area status
- Extended failure management for position sensing with integrated temperature control
- User interface with visual display of bus and failure status – 3 LED's
- Optional – 32 CAM's programmable
- Customer-specific memory – 16 Bytes

CANopen Lift Profile DS 417 V1.1

The following functionality is integrated:

- Car position unit
- Two virtual devices
- One virtual device delivers the position in absolute measuring steps (steps)
- One virtual device delivers the position as an absolute travel information in millimeters
- Lift number programmable
- Independent setting of the node address in relation with the CAN identifier
- Factor for speed calculation (e.g., measuring wheel circumference)
- Integration time for speed value of 1 to 32
- Two work areas with 2 upper and lower limits and the corresponding output states
- Variable PDO mapping for position, speed, acceleration, work area status
- Extended failure management for position sensing with integrated temperature control
- User interface with visual display of bus and failure status – 3 LEDs

Key features:

The object 6003h "Preset" is assigned to an integrated key, accessible from the outside "Watchdog-controlled" device.

Absolute, Multiturn Type RM-29 (Shaft) / RM-36 (Blind Hollow Shaft)

EtherCAT

General Electrical Characteristics:

Supply voltage:	10-30 VDC
Current consumption (without output load):	Max. 120 mA
Reverse polarity protection at power supply (+V):	Yes
RoHS compliant according to EU guideline 2011/65/EU	
UL approval:	file E356899

Device Characteristics:

Singleturn resolution	1-65535 (16 bit), (scalable: 1-65535)
Default value:	8192 (13 bit)
Total resolution:	scalable from 1 to 268435456 (28 bit) 12 Bit Multiturn
Code:	Binary
Interface:	EtherNet/EtherCAT

General Information about CoE (CAN over EtherCAT)

The EtherCAT encoders support the CANopen communication profile according to DS 301. In addition, device-specific profiles like the encoder profile DS 406 are available.

Scaling, preset values, limit switch values and many other parameters may be programmed via the EtherCAT bus. When switching the device on, all parameters are loaded from an EEPROM, where they were saved to protect them against power failure.

Position, speed, acceleration, temperature and working area status output may be combined as PDO mapping).

Fast

- **Fast data availability with reduced loading on the bus and controller:** Intelligent functions like the transmission of speed, acceleration or exiting a working area.
- **Fast, simple, error-free connection.**

Versatile

- **Up-to-the minute fieldbus performance:** PROFIBUS-DPV0 supports Class I and II.
- **Connection options:** Bus cover with M12 connector or cable connection.
- **Fast start-up** with pre-defined GSD file: A variety of scaling options, 16 bit singleturn resolution, 12 bit multiturn resolution.
- Comprehensive diagnostics, programmable to Class II.

Mechanical Characteristics:

Max. speed without shaft sealing (IP65) up to 158 °F (70 °C):	9,000 RPM, continuous 7,000 RPM
Max. speed without shaft sealing (IP65) up to Tmax:	7,000 RPM, continuous 4,000 RPM
Max. speed with shaft sealing (IP67) up to 158 °F (70 °C):	8,000 RPM, continuous 6,000 RPM
Max. speed with shaft sealing (IP67) up to Tmax:	6,000 RPM, continuous 3,000 RPM
Starting torque without shaft seal (IP65):	1.4 oz-in (< 0.01 Nm)
Starting torque with shaft seal (IP67):	4.25 oz-in (< 0.03 Nm)
Moment of inertia:	Shaft version: 0.219 oz-in ² (4.0 x 10 ⁻⁶ kgm ²) Hollow shaft version: 0.41 oz-in ² (7.5 x 10 ⁻⁶ kgm ²)
Radial load capacity of shaft:	18 lbs (80 N)
Axial load capacity of shaft:	9 lbs (40 N)
Weight:	approx. 1.26 lbs (0.57 kg) with bus terminal cover approx. 1.15 lbs (0.52 kg) with fixed connection
Protection acc. to EN 60 529:	Housing: IP67, Shaft: IP65, opt. IP67
Working temperature:	-40 to +176 °F (-40 to +80 °C)
Materials:	Shaft: stainless steel, Flange: aluminum, Housing: die cast zinc
Shock resistance acc. to DIN-IEC 68-2-27:	> 250 g (> 2,500 m/s ²), 6 ms
Vibration resistance acc. to DIN-IEC 68-2-6:	> 10 g (> 100 m/s ²), 55-2,000 Hz

- Safe operation in strong magnetic fields
- Special gears with specific toothing

Absolute, Multiturn Type RM-29 (Shaft) / RM-36 (Blind Hollow Shaft) PROFIBUS-DP

General Electrical Characteristics:

Supply voltage:	10-30 VDC
Current consumption (w/o output load):	Max. 120 mA
Reverse polarity protection:	Yes at power supply (+V)
RoHS compliant according to EU guideline 2011/65/EU	
UL approval:	file E356899

SET control button (zero or defined value, option):

Protected against accidental activation, can only be depressed with the tip of a ballpoint pen or similar.

Diagnostic LED (yellow):

LED on with: sensor error (PROFIBUS error)

Interface Characteristics PROFIBUS-DP:

Singleturn resolution	1-65536 (16 bits), default 8192 (13 bits)
Total resolution:	28 bit (scalable 1-2 ²⁸ steps)
Number of Revolutions:	4096 (12 bits), (scalable 1-4096)
Code:	Binary
Interface:	Specification according to PROFIBUS-DP 2.0 Standard (DIN 19245 Part 3) RS485 driver galvanically isolated.

Protocol:	PROFIBUS Encoder Profile V1.1 Class 1 and Class 2 with manufacturer-specific enhancements
Baud rate:	Max. 12 Mbits/s
Node address:	1-127 (set by rotary switches)
Termination switchable:	Set by DIP switches

PROFIBUS Encoder-Profile V1.1

The PROFIBUS-DP device profile describes the functionality of the communication and the user-specific component within the PROFIBUS fieldbus system. The encoder profile is definitive. Here the individual objects are defined independent of the manufacturer. Furthermore, the profiles offer space for additional manufacturer-specific functions. This means that PROFIBUS compliant device systems can be used now with the guarantee that they are ready for the future as well.

The following parameters may be programmed:

- Direction of rotation
- Scaling
Number of steps per revolution
Number of revolutions
Total resolution over Singleturn/Multiturn
- Preset value
- Diagnostics mode
- Position 16/32 Bit
- Speed UPM or Unit/s (16/32) Bit

The following functionality is integrated:

- Galvanic isolation of the bus stage with DC/DC converter
- Line driver according to RS485; max. 12 MB
- Address programmable via DIP switches
- Diagnostics LED
- Full Class I and Class II functionality

We reserve the right to make technical alterations without prior notice.

General Information about PROFINET

The PROFINET encoder implements the Encoder Profile 4.1. (according to the specification Encoder Version 4.1 Dec. 2008).

It permits scaling and preset values, as well as many other additional parameters to be programmed via the PROFINET-Bus. When switching on, all parameters are loaded from an EEPROM, where they were saved previously to protect them against power-failure, or taken over by the controller in the start-up phase. Position, speed and many other states of the encoder can be transmitted.

PROFINET IO

The complete encoder profile according to Profile Encoder Version 4.1 as well as the Identification and maintenance functionality Version 1.16 has been implemented. IM blocks 0, 1, 2, 3 and 4 are supported.

The **Media Redundancy Protocol** is implemented here. Basically, the advantage of MRP is that the functionality of the components, which are wired in a ring structure, is maintained in case of a failure or of a breakage of the wires in any location.

Absolute, Multiturn Type RM-29 (Shaft) / RM-36 (Blind Hollow Shaft)

PROFINET IO

General Electrical Characteristics:

Supply voltage:	10-30 VDC
Current consumption (without output load):	Max. 200 mA
Reverse polarity protection at power supply (+V):	Yes
RoHS compliant according to EU guideline 2011/65/EU	
UL approval:	file E356899

SSI/BISS

Reliable

- Sturdy bearing construction in Bearing-Lock design for resistance against vibration and installation errors.
- Ideal for use outdoors thanks to IP67 protection and wide temperature range from -40 to +85 °C.

Absolute

Versatile

- Available with SSI or BiSS interface and combined with SinCos incremental signals.
- The right fixing solution or type of connection available for every application.
- SET button and LED for simple start-up.
- High resolution feedback in real-time via incremental outputs SinCos and RS422.
- Short control cycles, clock frequency with SSI up to 2 MHz / with BiSS up to 10 MHz.

Insensitive

- Turck OptoASIC technology with all singleturn and multiturn functions on one single OptoASIC - offering the highest reliability, a high resolution up to 41 bits and 100 % magnetic field insensitivity.

Mechanical Characteristics:

Max. speed shaft version:	
IP65 up to 158 °F 70 °C:	12000 RPM, continuous 10000 RPM
IP65 up to T max:	8000 RPM, continuous 5000 RPM
IP67 up to 158 °F 70 °C:	11000 RPM, continuous 9000 RPM
IP67 up to T max:	8000 RPM, continuous 5000 RPM
Max. speed hollow shaft version:	
IP65 up to 158 °F 70 °C:	9000 RPM, continuous 6000 RPM
IP65 up to T max:	6000 RPM, continuous 3000 RPM
IP67 up to 158 °F 70 °C:	8000 RPM, continuous 4000 RPM
IP67 up to T max:	4000 RPM, continuous 2000 RPM
Starting torque (68 °F 20 °C):	
IP65:	< 1.4 oz - in (0.01 Nm)
IP67:	< 7 oz - in (0.05 Nm)
Shaft load capacity:	
Radial:	18 lbs (80 N)
Axial:	9 lbs (40 N)
Mass moment of inertia:	
Shaft version:	0.16 oz - in ² (3.0 × 10 ⁻⁶ kgm ²)
Hollow shaft version:	0.328 oz - in ² (6.0 × 10 ⁻⁶ kgm ²)
Weight:	approx. 1.0 lbs (0.45 kg)
Protection acc. to EN 60529:	
Housing:	IP67
Shaft:	IP65, opt. IP67
Working temperature range:	-40 to +185 °F (-40+85 °C) ¹⁾
Materials:	
Shaft:	stainless steel
Flange:	aluminium
Housing:	zinc die-cast
Cable:	PVC
Shock resistance acc. to EN 60068-2-27:	250 g (2,500 m/s ²), 6 ms
Vibration resistance acc. to EN 60068-2-6:	10 g (100 m/s ²), 55 - 2,000 Hz

General Electrical Characteristics:

Power supply:	5 VDC (+5%) or 10 - 30 VDC
Current consumption (no load): 5 VDC 10...30 VDC	max. 60 mA max. 30 mA
Reverse polarity protection at power supply (+V):	yes (at 10 - 30 VDC)
Short-circuit protected outputs:	yes ¹⁾
UL approval:	file E356899
CE compliant acc. to:	EMC guideline 2014/30/EU RoHS guideline 2011/65/EU

Interface Characteristics SSI:

Output driver:	RS485 transceiver type
Permissible load / channel:	max +/- 30 mA
Signal high:	typ 3.8 V
Signal level low with $I_{load} = 20 \text{ mA}$:	typ 1.3 V
Resolution singleturn:	10 - 17 bit
Number of revolutions (multiturn):	max 24 bit
Code:	binary or gray
SSI clock rate:	50 kHz - 2 MHz
Data refresh rate: ST resolution ≤ 14 bit: ST resolution ≥ 15 bit:	$\leq 1 \mu\text{s}$ 4 μs
Monoflop time:	$\leq 15 \mu\text{s}$

Note: If the clock starts cycling within the monoflop time, a second data transfer starts with the same data. If the clock starts cycling after the monoflop time, the data transfer starts with the new values. The update rate is dependent on the clock speed, data length and monoflop-time.

BiSS Interface:

Resolution singleturn:	10 - 17 bit
Number of revolutions (multiturn):	max 24 bit
Code:	binary
BiSS clock rate:	50 kHz - 10MHz
Max. update rate:	$< 10 \mu\text{s}$, depends on the clock rate and the data length
Data refresh rate:	$\leq 1 \mu\text{s}$

Note:

- bidirectional, factory programmable parameters are resolution, code, direction, alarms and warnings
- CRC data verification

¹⁾ Short circuit to 0V or to output; if power supply correctly applied

Status Output And LED:

Output driver:	open collector, internal pull up resistor 22 k Ω
Permissible load:	max 20 mA
Signal level:	HIGH: +V / LOW: $< 1V$
Active:	LOW

The optional LED (red) and the status output serve to display various alarm or error messages. In normal operation the LED is OFF and the status output is HIGH (open collector with int. pull up 22 k Ω).

An active status output (LOW) displays:

- sensor error, singleturn or multiturn (soiling, glass breakage etc.)
- LED fault (failure or aging)
- over- or under-temperature

In the SSI mode, the fault indication can only be reset by switching off the power-supply to the device.

Option Incremental Outputs (A/B), 2048 ppr:

	SinCos	RS422 TTL-compatible
Max frequency -3dB:	400 kHz	400 kHz
Signal Level:	1 Vpp ($\pm 20\%$)	HIGH: min 2.5 V LOW: max 0.5 V
Short circuit protected	yes ¹⁾	yes ¹⁾

SET Input:

Input characteristics:	active HIGH
Input type:	comparator
Signal level high:	min. 60% of +V (supply voltage), max: +V
Signal level low:	max. 30% of +V (supply voltage)
Input current:	$< 0.5 \text{ mA}$
Min. pulse duration (SET):	10 ms
Input delay:	1 ms
New position data readable after:	1 ms
Internal processing time:	200 ms

The encoder can be set to zero at any position by means of a HIGH signal on the SET input. Other preset values can be factory-programmed. The SET input has a signal processing time of approx. 1 ms, after which the new position data can be read via SSI or BiSS. Once the SET function has been triggered, the encoder requires an internal processing time of typ. 200 ms; during this time the power supply must not be switched off.

The SET function should be carried out while the encoder is at rest.

If this input is not used, it should be connected to 0 V (Encoder ground GND) in order to avoid interferences.

Absolute, Multiturn Type RM-103 (Shaft) / RM-104 (Hollow Shaft)

Red:	error display
Green:	status display
Combo red/ green:	error code

Interface Characteristics CANopen:

Resolution singleturn:	1 - 65536 (16 bit), scalable default: 8192 (13 bit)
Number of revolutions (multiturn):	max. 65536 (16 bit) scalable only via the total resolution
Total resolution:	1 - 4,292,967,296 (32 bit) default: 25 bit
Code:	binary
Interface:	CAN high-speed acc. to ISO 11898, Basic- and Full-CAN, CAN specification 2.0 B
Protocol:	CANopen profile DS406 V3.2 with manufacturer-specific add-ons, LSS-Service DS305 V2.0
Baud rate:	10 - 1000 kbit/s software configurable
Node address:	1 - 127 software configurable
Termination switchable:	software configurable
LSS protocol:	CIA LSS protocol DS305, global command support for node address and baud rate, selective commands via attributes of the identity object

General Information About CANopen

The CANopen encoders support the latest CANopen communication profile according to DS301 V4.2. In addition, device specific profiles such as encoder profile DS406 V3.2 and DS305 (LSS) are available.

The following operating modes may be selected: Polled Mode, Cyclic Mode, Sync Mode and a High Resolution Sync Protocol. Moreover, scale factors, preset values, limit switch values and many other additional parameters can be programmed via the CAN bus.

When switching the device on, all parameters, which have been saved on an EEPROM to protect them against power failure, are loaded again.

The following output values may be combined in a freely variable way as PDO (PDO mapping): **position, speed, temperature** as well as the **status of the working area**.

The encoders are available with a connector or a cable connection.

The device address and baud rate can be set/ modified by means of the software.

The two-color LED located on the back indicates the operating or fault status of the CAN bus, as well as the status of the internal diagnostics.

Universal Scaling Function

At the end of the physical resolution of an encoder, when scaling is active, an error appears if the division of the physical limit (GP_U) by the programmed total resolution (TMR) does not produce an integer.

The universal scaling function remedies this problem.

CANopen Communication Profile DS301 V4.2

Among others, the following functionality is integrated. (Class C2 functionality):

- NMT Slave
- Identity Object
- Error Behavior Object
- Variable PDO Mapping self-start programmable (Power on to operational), 4 Sending PDO's.
- Node address, baud rate and CANbus / programmable termination.
- Producer / consumer heartbeat.

CANopen encoder profile DS406 V3.2

The following parameters can be programmed:

- Event mode
- 2 working areas with 2 upper and lower limits and the corresponding output states.
- Variable PDO mapping for position, speed, work area status, error message, raw data.
- Extended failure management for position sensing.
- User interface with visual display of bus and failure status.
- Customer-specific memory 16 Byte.
- Customer-specific protocol.
- Universal Scaling Function (USF).
- "Watchdog controlled" device.
- Extended diagnostic modes.

LSS Layer Setting Services DS305 V2.0

- Global support of node-ID and baud rate.
- Selective protocol via identity object (1018h).

Absolute, Multiturn Type RM-105 (Shaft) / RM-106 (Blind Hollow Shaft)

EtherNet/IP

Reliable

- Increased ability to withstand vibration and installation errors. Sturdy Bearing-Lock design structure eliminates machine downtime and repairs.
- Wide temperature range of -40 to +176 °F (-40 to +80 °C).
- Fewer components and connection points increase the operational reliability: Turck OptoASIC technology with highest integration density (Chip-on-board).

Absolute

EtherNet/IP™

Fast

- 5x faster position value transfer than the usual market encoder – RPI time of 1 ms
- Fast and easy commissioning, configuration possible through cyclic services
- M12 connector ensures fast, simple, error-free connection

Versatile

- Thanks to the implementation of DLR (Device Level Ring) a single cable break does not lead to a "machine down" state.
- 32 bits total resolution, shafts up to 10 mm, blind hollow shafts up to 15 mm and certified EtherNet/IP functionality.
- The optical absolute multiturn EtherNet/IP encoders were designed for time sensitive applications. Their distinctive features help not only with the machine's performance as well as uptime, but also contribute to time and cost savings.

Mechanical Characteristics:

Max. speed shaft version (IP65) up to 158 °F (70 °C):	8,000 RPM, continuous 6000 RPM
Max. speed shaft version (IP65) up to Tmax:	6,000 RPM, continuous 4000 RPM
Max. speed blind hollow shaft version (IP65) up to 158 °F (70 °C):	6,000 RPM, continuous 4000 RPM
Max. speed blind hollow shaft version (IP65) up to Tmax:	4,000 RPM, continuous 3,000 RPM
Starting torque at 68 °F (20 °C):	1.4 oz-in (< 0.01 Nm)
Moment of inertia:	Shaft version: 0.16 oz-in ² (3.0 x 10 ⁻⁶ kgm ²) Hollow shaft version: 0.32 oz-in ² (6.0 x 10 ⁻⁶ kgm ²)
Radial load capacity of shaft:	18 lbs (80 N)
Axial load capacity of shaft:	9 lbs (40 N)
Weight:	approx. 1.0 lbs (0.45 kg)
Protection acc. to EN 60 529:	IP65
Working temperature:	-40 to +176 °F (-40 to +80 °C)
Materials:	Shaft: stainless steel, Flange: aluminum, Housing: aluminum

Vibration resistance acc. to EN 60068-2-26:	> 10 g (> 100 m/s ²), 55-2,000 Hz

General Information about EtherNetIP

EtherNet/IP conformance tested acc. to version CT-12 of Dec. 11, 2014
EtherNet/IP specification Vol 2, Ed 1.17
CIP specification Vol 1, Ed 3.16.

Applications

Industrial Ethernet is increasingly imposing itself as the new communication standard in automation technology. The goal is to create a vertical integration – that is to say: only one core computer, from the control level up to the industrial production plants – that will be able to control any devices.

The Turck EtherNet/IP encoders demonstrate their abilities in the following application examples: automotive production, logistics, metal-working, textile, printing and packaging machines.

Rotary Position Technology

Absolute Encoders, Multiturn

Absolute, Multiturn Type RM-105 (Shaft) / RM-106 (Blind Hollow Shaft)

EtherNet/IP

General Electrical Characteristics:

Supply voltage:	10-30 VDC
Current consumption (without output load):	Max. 250 mA
Reverse polarity protection at power supply (+V):	Yes
CE compliant acc. to:	EMC guideline 2014/30/EU RoHS guideline 2011/65/EU
UL approval:	file E356899

Device Characteristics:

Singleturn resolution	1-65536 (16 bit), (scalable: 1-65536)
Default value:	65536 (16 bit)
Multiturn resolution:	Max. 65536 (16 bit) scalable only via the total resolution
Total resolution:	scalable from 1 to 4,294,967,296 (32 bit)
Code:	Binary
Interface:	EtherNet/IP

EtherNet/IP features

- DLR (Device Level Ring) possible
- Qos (Quality of Service) possible
- ACD (Address Conflict Detection)
- Multicast and unicast capability

Universal Scaling Function (USF)

This Encoder has the Turck Universal Scaling Function (USF) always activated. There is no position error at the end of the total measuring range, when using a decimal divider for position scaling.

Without the USF function, you can only use a binary scaling divider. Otherwise, you get a position error at the end of the total measuring range (TMR).

Modbus Communication Profile V 1.02

- Node address, baud rate and bus termination programmable.

Modbus Application Protocol V 1.1b3

The following parameters can be programmed:

- 2 working area with 2 upper and lower limits and the corresponding output states.
- Extended failure management for position sensing.
- User interface with visual display of bus and failure status.
- "Watchdog controlled" device.
- Extended diagnostic modes.

Standard Wiring:

Connection Type:	GND (0V)	V+	D0	D1	Case Ground
Cable:	BK	RD	BU	WH	N/C
M12 Pin:	3	2	5	4	1

Mounting advice:

The flanges and shafts of the encoder and drive should not be rigidly coupled together at the same time. We recommend the use of suitable couplings (see page G1, Accessories).

We reserve the right to make technical alterations without prior notice.

Absolute, Multiturn Type RM-89 (Shaft) / RM-90 (Blind Hollow Shaft)

DeviceNet

High rotational speed

Temperature
-40 to +85 °C

High IP
IP67

High shaft load capacity

Shock/vibration resistant

Reliable

- Heavy duty resolver with DeviceNet network communication.
- Wide temperature range of -40 to +185 °F (-40 to +85 °C).
- Two status LED's present to determine the state of the device.

DeviceNet™

Versatile

- Node address and baud rate set with rotary and DIP switches.
- 28 bits total resolution, shafts up to 0.625", blind hollow shafts up to 14 mm.
- Aluminum housing standard with optional stainless steel housing material for harsh environments.

Fast

- Position response time of 1 ms.
- Fast commissioning with programmable parameters stored in internal non-volatile memory for fast retrieval.
- M12 connector ensures fast, simple, error-free connection.

Mechanical Characteristics:

Max. speed:	6000 rpm
Starting torque at 77 °F (25 °C):	
6mm, 10mm, 0.25" and 0.375" shaft	2.0 oz-in (0.01 Nm)
All blind hollow shaft	6.0 oz-in (0.04 Nm)
0.625" shaft	6.0 oz-in (0.04 Nm)
Moment of inertia:	
6mm, 10mm, 0.25" and 0.375" shaft	6.0×10^{-4} oz-in-sec ² (0.04kgm ²)
All blind hollow shaft	7.0×10^{-4} oz-in-sec ² (0.05 kgm ²)
0.625" shaft	8.5×10^{-4} oz-in-sec ² (0.06 kgm ²)
Radial load capacity of shaft:	40 lbs (178 N) [100 lbs (445N) for 0.625" shaft]
Axial load capacity of shaft:	20 lbs (89 N) [50 lbs (222N) for 0.625" shaft]
Weight:	<2.0 lbs (0.91 kg)
Protection:	IP67
Working temperature:	-40 to +185 °F (-40 to +85 °C)
Materials:	Shaft: stainless steel Flange: aluminum Housing: aluminum
Shock resistance:	50 g (500 m/s ²), 11 ms
Vibration resistance:	20 g (200 m/s ²), 5-2000 Hz

General Information about DeviceNet

DeviceNet is a protocol stack that implements the Common Industrial Protocol (CIP) over CANbus. The CIP is sponsored by the Open DeviceNet Vendors Association (ODVA) and is implemented over a variety of networks. The RM-89/RM-90 follows the Resolver Device Profile that is defined in the CIP specification.

Rotary Position Technology

Absolute Encoders, Multiturn

Absolute, Multiturn Type RM-89 (Shaft) / RM-90 (Blind Hollow Shaft)

DeviceNet

Electrical Characteristics:

Supply voltage:	11 - 25 VDC
Power Requirements:	1.5 W max. (50 mA @24 VDC typ.)

Device Characteristics:

Singleturn resolution:	1-65536 (16 bit), (scalable: 1-65536)
Multiturn resolution:	4096 (12 bit)
Total resolution:	scalable from 0 to 268,435,455 (28 bit)
Interface:	DeviceNet

The following functionalities are integrated:

Adjustable parameters

- Count Direction
- Scaling Function Control
- Counts per Turn
- Total Measuring Range
- Velocity Format
- Preset

Objects (CIP Objects)

- Assembly Object
- Position Sensor Object
- DeviceNet Object

Scaling Function Control Parameter

To help eliminate a rollover error (when the total measurement range is less than the total counts available), the position will return to zero before the full mechanical travel is completed. The Scaling Function Control Parameter can be enabled.

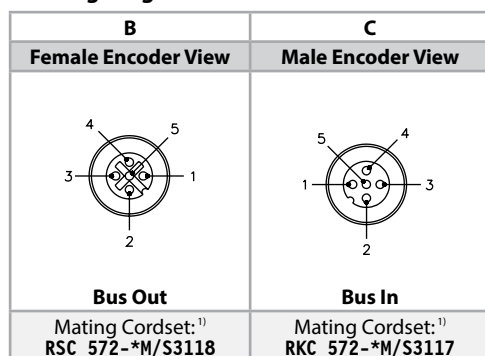

Rear side connection and display elements

Standard Wiring (Bus):

Direction:	Bus In					Bus Out

Absolute Encoders

Rotary Position Technology

Absolute Encoders, Multiturn

Absolute, Multiturn Type RA-174 (Large Hollow Shaft)

Robust

- Decoupling of hollow shaft and encoder.
- Solid housing.

Versatile

- Can be combined with all Ø58 mm solid shaft encoders.
- Many variants for clamping ring attachment.
- Three different torque stop lengths.

Mechanical Characteristics

Maximum speed (continuous operation):	77 °F [25 °C]	2500 rpm
	104 °F [40 °C]	1750 rpm
	131 °F [55 °C]	1000 rpm
	158 °F [70 °C]	250 rpm
Maximum speed (short-term operation) ¹⁾ :	77 °F [25 °C]	4500 rpm
	104 °F [40 °C]	3250 rpm
	131 °F [55 °C]	2000 rpm
	158 °F [70 °C]	750 rpm
Starting torque at 73.4 °F [23 °C]:		max. 2124 oz-in. [15 Nm]
Weight:		approx. 7.7 lbs [3.5 kg]
Protection acc. to EN 60529/DIN 40050-9:		IP64
Working temperature range:		-32 to +158 °F (-0 to +70 °C)
Material:	housing	Aluminum
	shaft	stainless steel

¹⁾ 50% duty cycle, switch on time max. 5 min.

Electrical Characteristics:

The electrical characteristics and the connection can be found in the catalog pages of the relevant encoder.

Flex Brackets

Part Number:
RA-FB

Description:
Flex bracket for Hollow Shaft
RI-09, RS-31, RS-33

Kit includes: (2) M2.5x6 mm screws

Part Number:
RA-E-46

Description:
Slotted flex mount for hollow shaft series RI-05, RI-09,
RS-07, RS-48, RS-49, RS-53, RM-50, RM-51

Kit includes: (2) M2.5x6 mm screws

Part Number:
RA-S7

Description: single point tether arm, short,
for RI-12, RS-31, RS-33, RM-35, RM-36

Kit includes: (3) M3x6 mm screws

We reserve the right to make technical alterations without prior notice.

Flex Brackets

Part Number:
RA-S6

Description:
Single point tether arm, medium, for
RI-12, RS-31, RS-33, RM-35,
RM-36,

Kit includes: (3) M3x6 mm screws

Part Number:
RA-E2

Description:
Flex mount for hollow
shaft series RI-12

Kit includes:
(3) M3x6 mm screws,
(3) lock washers

We reserve the right to make technical alterations without prior notice.

Encoder Accessories

Rotary Position Technology

Encoder Accessories

Flex Brackets

Part Number:
RA-E1

Description:
Flex mount, pitch circle \varnothing 65 mm for
RI-12, RS-31, RS-33, RM-35, RM-36

Kit includes: (2) screws to attach
to encoder

Part Number:
RA-E

Description:
Slotted flex mount for RI-12(flange E),
RS-31, RS-33, RM-35, RM-36

Kit includes: (4) M2.5x6 screws
for RI-12, RS-31, RS-33

We reserve the right to make technical alterations without prior notice.

Flex Brackets

Part Number:
RA-SB

Description:
Single point tether arm for hollow shaft series RI-12

Kit includes: (3) M3x6 mm screws

Part Number:
RA-SA

Description:
Single point tether arm for hollow shaft series RI-12, RS-31, RS-33, RM-35, RM-36

Kit includes: (3) M3x6 mm screws

Part Number:
RA-S1

Description:
Standard single point tether arm for hollow shaft series RI-12

Kit includes: (1) nylon step washer (9.5 mm inside diameter), (4) M3x6 screws, (4) lock washers

We reserve the right to make technical alterations without prior notice.

Encoder Accessories

Rotary Position Technology

Encoder Accessories

Flex Brackets

Part Number:
RA-E1-SM

Description:
Flex mount for hollow shaft series,
RS-31, RS-33, RM-35, RM-36 (flange E1)

Kit includes: (2) M2.5x6 mm screws

Part Number:
RA-43-E2

Description:
4.5" C-face tether for RI-43

Kit includes: (3) M4x5 mm screws,
(1) 3/8-16 x 1/0" bolt, (1) 3/8-16 nut,
(1) Nylon step washer, (1) Nylon mating washer

We reserve the right to make technical alterations without prior notice.

Torque Stop

Part Number:
RA-T1

Description:
Torque stop for RI-05, RI-09, RI-12, RS-07, RS-31, RS-33, RS-48, RS-49, RS-53, RM-35, RM-36, RM-50, RM-51

Kit includes:
(1) M2.5x5 mm screw

Part Number:
RA-43-S5

Description:
Torque stop (short) for RI-43 large bore series

Kit includes:
(2) M2.5x5 mm screws

Part Number:
RA-T

Description:
Torque stop for RI-05, RI-09, RI-12, RS-07, RS-31, RS-33, RS-48, RS-49, RS-53, RM-35, RM-36, RM-50, RM-51

Kit includes:
(1) M2.5x5 mm screw

Part Number:
RA-43-S4

Description:
Torque stop (long) for RI-43 large bore series

Kit includes:
(2) M2.5x5 mm screws

Couplings

Turck precision flexible couplings are engineered for optimum performance with Turck encoders. Designed to connect two misaligned shafts, our beam style couplings offer superior performance, reliability, long life and are easy to install.

Installation: Clean and degrease all shafts, check parallel alignment. Do not exceed misalignment and axial motion specifications. Clamp one end of the coupling to the drive shaft. Insert encoder into the other end. Tap lightly on the coupling hub to stabilize system. Tighten the second screw.

Note: Light should be visible through the beams.

Coupling Tabulation - in (mm)

Part Number	D	L	Parallel	Angular Misalignment	Axial Motion

Other options available on request.

Encoder Accessories

Rotary Position Technology

Encoder Accessories

Spring Loaded Bracket

Part Number:
RA-SB-58

Description:
Spring loaded right angle bracket for measuring wheels and rack and pinion systems

Used with clamping flange 58 mm
face mount screws included

Assembly Bell

Part Number:
RA-AB-XXX-XXX

Description:
Assembly bell

Kit includes:
- Coupling
- Mounting screws

Purchase separately:
- Optional assembly with servo cleat RA-SC-58
- Used with servo flange Ø 58 mm

Part Number Key:
RA-AB-XXX-XXX

Mounting Example:

We reserve the right to make technical alterations without prior notice.

Servo Cleats

Part Number	For Encoder Type	D1 in. [mm]	D2 in. [mm]	D3 in. [mm]	A in. [mm]	B in. [mm]	C in. [mm]
RA-SC-36	36 mm servo flange	0.267 [6.8]	0.197 [5.0]	0.110 [2.8]	0.138 [3.5]	0.089 [2.25]	0.35 [0.9]
RA-SC-58	58 mm servo flange	0.350 [8.9]	0.256 [6.5]	0.126 [3.2]	0.220 [5.6]	0.114 [2.9]	0.047 [1.2]

- For use with rotary encoders with servo flange
- Kit includes: 3 cleats and 3 screws
- Chrome plated steel
- Galvanized nickel finish

Mounting Attachments

Part Number	Description	A in. [mm]	B in. [mm]	C in. [mm]	D in. [mm]	E in. [mm]
RA-R-58-4	Square adapter flange	2.283 [58.0]	1.890 [48.0]	.157 [4.0]	.177 [4.5]	.157 [4.0]
RA-R-63-3		2.500 [63.5]	2.067 [52.5]	.118 [3.0]	.217 [5.5]	.295 [7.5]
RA-R-80-4		3.150 [80.0]	2.559 [65.0]	.157 [4.0]	.217 [5.5]	.295 [7.5]

Part Number:
RA-R-70-10

Description:
Used with 58 mm clamping flange face mount kit

Kit includes: Mounting screws

We reserve the right to make technical alterations without prior notice.

Encoder Accessories

Mounting Attachments

Part Number:
RA-S-70-5

Description:
70 mm flange for shafted encoders RI-10

Kit includes: 3 screws to attach flange to encoder

Part Number:
RA-S-70-10

Description:
70 mm flange for shafted encoders RI-10, RS-24, RS-25, RM-28, RM-29

Kit includes: 3 screws to attach flange to encoder

Part Number:
RA-S-65-6

Description:
65 mm flange for shafted encoders RI-10, RS-24, RS-25, RM-28, RM-29

Kit includes: 3 screws to attach flange to encoder

Part Number:
RA-S-58-10

Description:
58 mm flange to convert encoders with clamping flange into servo flange

Kit includes: 3 screws to attach flange to encoder

We reserve the right to make technical alterations without prior notice.

Brackets

Part Number:
RA-MB-58

Description:
Right angle bracket
Used with clamping flange Ø 58 mm face mount
Screws Included

Rack and Pinion

Part Number:
RA-RACK-1000

Description:
Rack

Part Number:
RA-P-6
RA-P-10

Description:
Pinion

Part Number:
RA-RACK-95

Description:
Support

We reserve the right to make technical alterations without prior notice.

Bearing Unit

Part Number:
RA-BU-10-10

Description:
Robust bearing unit for solid shaft encoders with clamping flange and shaft 10 mm

Speed: Max 6,000 RPM
Load: Radial: 135 lbs (600 N), Axial: 45 lbs (200 N)
Weight: 1.23 lbs (0.56 kg)
Protection: IP67 (when closure caps are used)

Kit includes:
 - Bearing box
 - (3) M4x25 cylindrical pins
 - (1) O-ring

Unit shown with optional encoder attached. Consult factory for additional information.

Plug & Play with Standard Automotive Connectors

On request, Turck can also supply the encoders with short cables and connectors as commonly used with standard makes in the automotive sector: Deutsch, Packard, and Molex are just some examples. This makes connection on the prefabricated cable harness a simple plug & play operation with a proven connection technology.

8-Pin M12 Eurofast Cordsets

Rotary Measurement Technology

Introduction:

Encoders may be used in applications where length, position, speed or an angular position is measured. They transform mechanical movements into electrical signals, and can be divided into incremental and absolute measuring systems.

Incremental encoders generate pulses, where the number of pulses can be a measure of speed, length or position. In absolute encoders, every position corresponds to a unique code pattern, so that the actual position is recognized.

Turck can supply all encoders, whether its a solid shaft or hollow shaft version. Using a hollow shaft encoder saves up to 30% of costs and up to 50% of the required space, compared to a shaft encoder. This is achieved by avoiding additional couplings, brackets and other assembly aids.

Application Examples:

Positioning

Length Measurement

Detecting a Fork's Position

Detecting Position

Angular Measurement

Velocity Measurement e.g., in drive engineering (geared motors)

We reserve the right to make technical alterations without prior notice.

Rotary Measurement Technology

Approvals:

Most Turck products carry UL (Underwriters Laboratories Inc.) approvals. Turck products comply with RoHS standards.

Aging Compensation:

LEDs inevitably lose power over a period of time. As a result, the output signal degrades. The phase shift between channel A and B of 90° also degrades, and the direction of rotation may no longer be detected. A special electronic circuit built into the Turck specific ASIC prevents this effect.

Signals of a new encoder or encoders with aging compensation:

Signals of an older encoder without aging compensation:

Benefit: The aging compensation circuit ensures the same signal, even after many years of operating time. Machine downtime is reduced dramatically, while reliability is increased.

Temperature Compensation:

This specialized circuit ensures that the quality of the signal will stay on the same high level over the whole working temperature range.

Benefit: The positioning accuracy of a machine will not be affected by temperature changes.

Current Consumption:

The values for current consumption in this catalog apply for ambient temperature (23 °C). Because of the temperature compensation, the current consumption of the encoder rises with the temperature. This increase in current is taken into consideration when giving the figure for maximum current consumption. The output currents are dependent on the user's input circuit and are therefore not included in the figures given; these should be calculated and added in.

Short-Circuit Protection:

The outputs of all the encoders are short-circuit protected, provided that the supply voltage is correctly wired. If an output is connected by mistake to 0 V or +Ub or with another output, the device will not be damaged. As soon as the error is corrected, the encoder is ready for use again.

Benefit: Wiring circuit errors during installation that often occur in the hectic day-to-day industrial environments do not lead to the encoder being permanently damaged.

Environmental Conditions:

A significant influence on the lifetime of the encoder is set by the environment in which the encoder is operating. For example, the ambient temperature, expected shaft load, and possible grade of dust/dirt and humidity/liquids. The support design and the use of high quality components makes our encoders suitable for applications in rough conditions. Many references from customers including Bosch, Siemens, and Bombardier are proof of this high quality.

We reserve the right to make technical alterations without prior notice.

General Information

General Information

Rotary Measurement Technology

Temperature:

Definition according to DIN standards 32 878

Working Temperature: Is defined as the environmental temperature in which the encoder will produce the signals defined in the data sheets.

Operating Temperature: Is defined as the environmental temperature that the encoder can withstand without getting damaged.

Dirt/Dust and Humidity/Water:

An ingress protection (IP) classification according to EN 60529 describes how the encoder is protected against particles and water. The first digit following IP defines the size of the particles. The higher the number, the smaller the particles. The second digit defines the resistance against water. The higher the number, the higher the water pressure can be. Turck encoders have a protection up to IP67.

Protection Against Particles (first digit):

0	Not protected
1	Protected against particles 50 mm and larger
2	Protected against particles 12.5 mm and larger
3	Protected against particles 2.5 mm and larger
4	Protected against particles 1.0 mm and larger
5	Protected against dust
6	Dust proof

IP69k acc. to DIN 40050 Part 9: protected against high-pressure water/steam jet cleaning

Protection Against Particles (second digit):

0	Not protected
1	Protected against vertically falling drops of water
2	Protected against falling drops of water up to 15° from vertical
3	Protected against water sprayed up to 60° from vertical
4	Protected against water sprayed from all directions, limited ingress permitted
5	Protected against low pressure jets from all directions, limited ingress permitted
6	Protected against strong jets of water (e.g., for use on ship decks), limited ingress permitted
7	Protection against the affects of immersion between 15 cm and 1 m
8	Protected against long periods of immersion under pressure

Bearing-Lock:

Bearing-Lock: The proven Bearing-Lock construction with an additionally mechanical protected shaft seal.

We reserve the right to make technical alterations without prior notice.

Rotary Measurement Technology - Encoders

Installing Encoders:

- Encoder shafts and bearings are subjected to loads for a variety of reasons:
- Installation tolerances when mounting the encoders (radial and angular displacement)
 - Thermal changes (e.g., linear expansion of the drive shaft)
 - Effects of wear (e.g., radial runout of the drive shaft or vibrations)

These load factors have a direct effect on the life expectancy of the shaft bearings and on the quality of the signal. For this reason, Turck provides a wide variety of accessories that should be used to compensate for these forces. For encoders with a solid shaft, this is generally done by using shaft couplings between the drive shaft and the encoder shaft. The solution with hollow shaft encoders is to use flex couplings, fixing brackets, or torque stops between the encoder bracket and the mounting surface. Not using a coupling generally leads to unacceptably high loads on the bearings; the ensuing wear will cause the encoder to fail prematurely.

In order to avoid permanent damage of the encoder, certain bearing loads should not be exceeded. If hollow shaft encoders are correctly installed and the torque stops or flex couplings that are available from Turck are used, then no problems will occur. For solid shaft encoders, the maximum permitted axial and radial loads are shown in the appropriate technical data.

Mounting Examples for Hollow Shaft Encoders:

Mounting a hollow shaft encoder with torque stop and pin is easiest and fastest. Standard hollow shaft encoders are equipped with the torque stop.

Application: If axial play is less than 0.5 mm and a resolution of up to 2500 ppr (if no pulse doubling is used).

Mounting of a hollow shaft encoder with extended torque stop and long pin.

Application: Especially recommended if there is a large axial play. Due to the larger mounting radius of the pin, the resolution can be higher (up to 3600 ppr, if no pulse doubling is used).

Mounting of a hollow shaft encoder with a flex coupling.

Application: For higher resolution or if no pin can be used due to mechanical restrictions. No restrictions on resolution.

We reserve the right to make technical alterations without prior notice.

General Information

Rotary Measurement Technology - Encoders

Mounting Examples for Shaft Encoders with Servo Bracket:

Mounting with fastening eccentrics and coupling (to reduce shaft overload).

Mounting with assembly bell, fastening eccentrics and coupling (to prevent shaft overload and to insulate the encoder thermally and electrically).

Mounting Examples for Shaft Encoders with Clamping Bracket:

Mounting with an angular bracket and coupling (to reduce shaft overload).

Mounting with a commonly used clamping device and coupling (to reduce shaft overload).

We reserve the right to make technical alterations without prior notice.

Rotary Measurement Technology - Encoders

Loading of Encoder Shaft Bearings Using Coupling Forces:

With all spring couplings (shaft coupling, flex coupling, fixing bracket), alignment and axial errors are converted to a force that corresponds to the spring constant of the coupling. This force has to be absorbed by the encoder shaft bearings. When installing an encoder, this should be done with as little force as possible; i.e., without any unnecessary initial tension on the coupling. If this is adhered to, adequate tolerance compensation is guaranteed for the whole service life of the encoder bearings.

This force does not occur with torque stops for hollow shaft encoders, where the encoder is prevented from turning by means of a pin or rod. Although the encoder is prevented from rotating due to a rigid interlock, the encoder is still free to move in any other direction. This is dependent on it being mounted in such a way that it has freedom to move radially and axially (thermal linear expansion of the drive shaft).

Possible Errors in Accuracy Due to Couplings:

1. Deviations in accuracy caused by torsion of a spring coupling (in particular shaft couplings)

This deviation in accuracy is defined by the torque to be transmitted (bearing friction and mass moment of inertia) and by the torsional spring constant of the torque stop.

The following applies:
$$\text{Max. error (degree)} = \frac{\text{max. torque [Ncm]}}{\text{torsional spring constant [Ncm/degree]}}$$

The following table serves to estimate the ratio between such an error and the smallest increment of an encoder:

Relationship between the resolution of an encoder in bit and the smallest increment in angular degrees:

Resolution	binary	10 bit	11 bit	12 bit	13 bit	14 bit	17 bit
	ppr	1024	2048	4096	8192	16384	131072
Increment	degrees	0.352	0.176	0.088	0.044	0.022	0.0028
	degrees:min:sec	0:21:06	0:10:33	0:05:16	0:02:38	0:01:19	0:00:10
	sec	1266	633	316	158	79	010

2. Deviations in accuracy caused by radial play in the drive shaft with asymmetrical mounting of the couplings

Here, one has to differentiate between couplings that are mounted in an axially symmetrical manner around the shaft (all shaft couplings, many flex couplings) and asymmetrically mounted couplings (many flex couplings, all mounting brackets and pin-based torque stops).

With asymmetrical couplings, deviations in accuracy can arise due to radial movements of the drive shaft (radial runout/play). These deviations are dependent on the amount of the radial play and the distance of the torque stop locating point from the drive shaft.

We reserve the right to make technical alterations without prior notice.

General Information

Rotary Measurement Technology - Encoders

Maximum permissible radial runout to achieve an accuracy >1/2 LSB when using an asymmetrical 1 point torque stop:

The relationship is shown in the following diagram:

Particular Shaft Loading Due to Toothed-Wheels, Gear-Pulleys and Similar Elements:

Measuring wheels, toothed wheels or gear pulleys, which are mounted directly on the encoder shaft, exert radial forces on the latter, dependent on pre-stressing and angular acceleration. Turck encoders are designed to absorb these forces to a great extent. The maximum permissible load capacity of the shaft is shown in the technical data for the encoder. If these load values are exceeded, the encoder shaft must be isolated from the radial load by selecting an appropriate shaft with its own bearings that can absorb the forces. Turck offers suitable bearing blocks and bearing boxes for this purpose (please refer to the page G1, Accessories in this catalog).

We reserve the right to make technical alterations without prior notice.

Rotary Measurement Technology - Incremental Encoders

Incremental Encoders Assembly and Function:

Optical Scanning

The optical encoder operates on the Moiré Fringe principal of optics. Light from the LED passes through the code disk, the mask, and onto the photo receiver. The photo receiver outputs a sine wave which corresponds to the flashing light pulses from the LED. The sine wave is then converted to a square wave by the receiver circuitry.

Magnetic Scanning

In addition to optical encoders, Turck offers encoders that use magnetic technology to create a robust incremental encoder. The magnetic field of the permanent magnet is rotated over the magnetic ASIC sensor that convert the changing magnetic fields into incremental encoder signals.

Incremental

Mechanical Advantages of Turck Encoders:

Sturdy bearing construction: "Bearing-Lock design"

- Interlocked bearings, large bearing span and strong outer bearings ensure stability when subjected to vibration.
- Ideal for outdoor use thanks to its solid die-cast housing and radial shaft seal, as well as IP67 protection rating and a temperature range from -40 to 185 °F (-40 to 85 °C).

Processing of the Signals:

The sine wave signals are processed in an electronic circuitry, usually a Turck specific ASIC. This is necessary because most controllers require digital signals with a certain voltage level. Signals are pre-processed in the encoder by the output circuit depending on the application.

Selecting an Incremental Encoder:

When selecting a suitable incremental encoder, refer to the general selection criteria shown on page G1, Accessories.

Multiplication of Pulses:

The resolution of a two channel encoder can be multiplied by two or four using special edge detecting.

An encoder with physically 5,000 pulses per revolution can generate 20,000 pulses per revolution using this technique.

We reserve the right to make technical alterations without prior notice.

General Information

Rotary Measurement Technology - Incremental Encoders

Inverted Signals:

When used in environments with high electrical noise and/or very long cable distances, it is recommended to use encoders with inverted (complementary) signals. These signals are available with RS422 and sine wave outputs. Turck also offers push-pull outputs.

Number of Channels:

Encoders with one output channel:

Encoders with one output channel are used where no direction sensing is needed (e.g., speed control or length measuring).

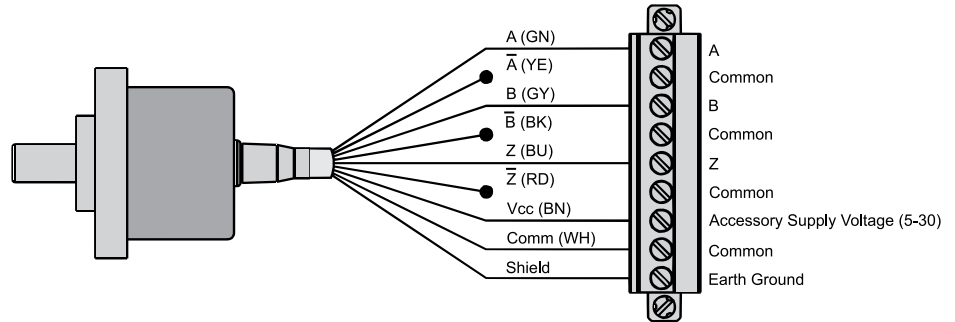

Encoders with two output channel:

Applications to sense the direction of a rotation require encoders with two channels (A and B) being shifted 90° out of phase. By detecting the phase shift, the direction can be located.

- Shaft turning clockwise, top-view of shaft
- Inverted signals available
- 0-pulse is linked with channel A and B;
 t_r = rise time, t_f = fall time

Single ended connection:

Complements (A not, B not, Z not) should never be tied to common or to each other. The unused wires should be tied back and insulated to prevent them from touching Vcc, common or any other signal wires or driver damage can occur.

We reserve the right to make technical alterations without prior notice.

Rotary Measurement Technology - Incremental Encoders

Number of Channels:

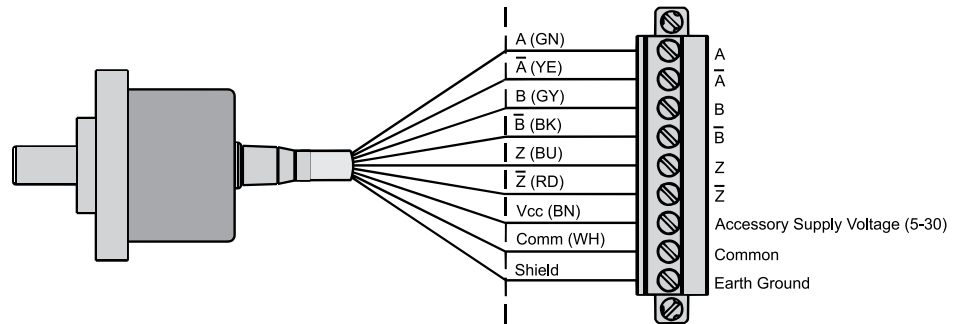

Encoders with three output channels:

In addition to two channels, a zero signal that appears once per turn is also available. This can be used as a reference signal during the first revolution after power up.

- Shaft turning clockwise, top-view of shaft
- Inverted signals available
- 0-pulse is linked to AND with channel A and B;
tr = rise time, tf = fall time

Differential Wiring:

For general industrial environments where there are no large motor or drives present, the standard M12 Eurofast® cordset with non-twisted pair conductors will suffice. In heavy industrial environments, or when used on AC vector motors, M12 Eurofast cordsets with twisted pairs should be used.

Resolution - Measuring Wheel:

An encoder is equipped with a measuring wheel. Every revolution corresponds to a distance of 200 mm (circumference). The accuracy should be 0.1 mm. What is the required resolution (ppr)?

Given:
Circumference of the measuring wheel:
 $U = 200 \text{ [mm]}$

Wanted: Resolution of the encoder:
 $A = ? \text{ [pulses/revolution]}$

Accuracy of the system:
 $G = 0.1 \text{ [mm]}$

$$\text{resolution} = \frac{\text{circumference}}{\text{accuracy}} = \frac{U}{G}$$

Sensor Outputs:

The sensor outputs are used if the distance from the encoder to the control unit is very long and the voltage supply at the encoder could drop due to this long distance.

The input impedance of the sensor inputs (Controller) is very high, and the voltage drop on the sensor output line is almost zero. Due to this, it is possible to detect the actual supply voltage of the encoder (e.g., 4.2 V instead of 5 V). Based on this information, the controller will increase the voltage supply to, for example, 5.8 V. This feature is generally available on selected 5000, 5800 and A02H encoder models. Please refer to the selection guides for more information on this feature.

We reserve the right to make technical alterations without prior notice.

General Information

Rotary Measurement Technology - Incremental Encoders

Pulse Frequency:

The required pulse frequency can be calculated based on the number of pulses per revolution (ppr) and the speed (rpm). The maximum pulse frequency is listed for each encoder. The pulse frequency can be from 300 kHz to 800 kHz.

Example:

How to calculate the required pulse frequency f_{max} :

Given: speed

$n = 3000$ RPM

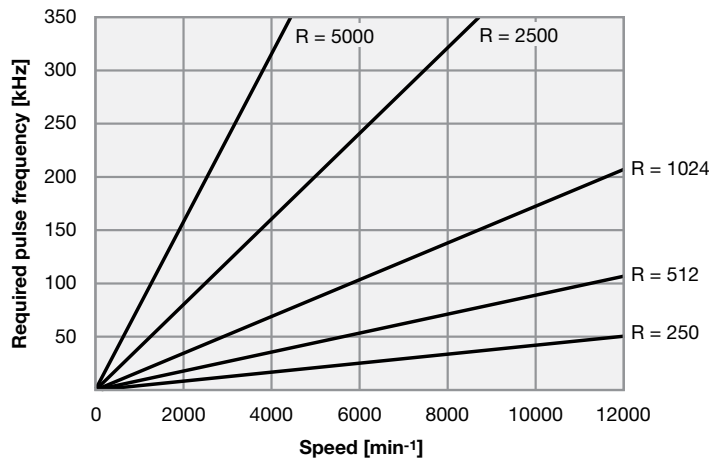

Resolution of the encoder

$R = 1000$ ppr

$$f_{max} = \frac{n \times R}{60}$$

The required pulse frequency is 50 kHz. Now you can compare this result with the data of the encoder you would like to choose.

This diagram can be used as a quick guide for the most common resolutions:

We reserve the right to make technical alterations without prior notice.

Outputs and Voltage Supplies (overview):

Turck offers a wide range of possible outputs and voltage supplies for any application:

Output	Inverted Signals	Voltage Supply
RS422	Yes	5 VDC
RS422	Yes	10-30 VDC or 5-30 VDC
Push pull output	No	10-30 VDC or 5-30 VDC
Push pull output	Yes	10-30 VDC or 5-30 VDC
Push pull (7272)	Yes	5-30 VDC
Sine wave voltage output	Yes	5 VDC
Sine wave voltage output	Yes	10-30 VDC

If the encoder is used in an environment with high electrical noise and long cables, it is recommended to use inverted signals.

Rotary Measurement Technology - Incremental Encoders

Digital Outputs:

The sine wave signal from the optical system is first digitized to have square wave signals available.

- Shaft turning clockwise, top view of shaft
- Inverted signals are available
- 0-pulse is linked to channel A and B

There are two possible outputs available to transmit the signals, RS422 (TTL compatible) or push-pull (PNP or NPN). When choosing the suitable output for the application, the following points have to be considered:

- The corresponding unit / controller the encoder will be connected to
- The distance from the encoder to the receiver unit
- The sensitivity against electrical noise or other interference

Available Output Drivers:

The IC-DL is a fast line driver with six independent channels and ideal for 10-30 VDC control circuits. It can transmit a push pull signal with inverted signals up to 250 meters. An IC-DL encoder can be used as a differential line driver, a sinking output or a sourcing output. The push-pull output stages have been designed to cope with a high driver power of typically 100 mA at 30 VDC and are compatible with TIA/EIA RS-422 standard. The outputs are current-limited and short-circuit-proof. The output channels can be shorted and are protected by a thermal overload circuit that detects the short and reactivates the output when the short circuit is removed.

The 7272 output driver is capable of transmitting digital encoder signals to 30 meters, and allows interfacing to drives, PLCs, discrete counters, etc. Depending on its physical connection to a device, this driver can be used as a differential line driver, a sinking output, or a sourcing output. This driver can provide voltage levels equal to the encoders supply voltage (up to 30 V), and can sink or source 40 mA of current. This device is also referred to as a push-pull driver. The outputs are short circuit protected by utilization of internal current limiting and thermal shutdown during overload. Caution: only one channel can be shorted at a time.

The 7272 is a replacement for the following IC's: 4469, 88C30, 8830, and 26LS31. The 7272 will also replace open collector outputs with internal pull up resistors.

The 26C31 is an output driver capable of transmitting digital encoder signals to 100 meters, and allows interfacing to drives, PLC, discrete counters, etc. Depending on its physical connection to a device, this driver can be used as a differential line driver, a sinking output or a sourcing output. This driver can provide voltage levels to 3.5 V (TTL Level), and can sink or source 20 mA of current. This device is also referred to as a push-pull driver. The outputs are short circuit protected by utilization of internal current limiting and thermal shutdown during overload. The 26C31 is a replacement for the 26LS31 and will also replace open collector outputs with internal pull up resistors

The 7273 IC is an open collector driver manufactured by Texas Instruments. This device should be used for short transmission distance (up to 5 meters) and in environments with little or no electrical interference. This driver acts like a switch sinking current to ground. Maximum sinking capability is 20 mA maximum and the maximum voltage applied to the output is 30 VDC. This output is very common for interfacing to discrete counters. This output is equal to: 3904, 7406, 3302, 681, 689.

We reserve the right to make technical alterations without prior notice.

General Information

Rotary Measurement Technology - Incremental Encoders

RS422: Output Circuit and Recommended Input Circuit

Push-Pull Outputs:

Push-pull outputs are suitable for count interface cards, electronic counters or PLC inputs. They are available in **two versions**:

Push-pull:

- Push-pull with integrated wave impedance adjustment, recommended cable impedance 40-150 Ω
- Recommended for long cable lengths, high pulse frequencies and output voltages up to 30 V
- With or without inverted (complementary) signals

Push-pull (7272):

- Universal line driver 5-30 V with low-level (max 0.5 V)
- Recommended for cable lengths up to 30 m
- With inverted signals

Output Circuit and Recommended Input Circuit Push-Pull with Inverted Signals:

Rotary Measurement Technology - Incremental Encoders

Output Circuit and Recommended Input Circuit Push-Pull Without Inverted Signals:

Sine Wave Outputs:

The sine wave signals are available as voltage signals. They can be further processed and multiplied by a factor of 10, 20, 50, 100, 400, 500, 1000 res. binary factors (512, 1024). Due to the interpolation of the two signals, which are 90° out of phase, a very high resolution can be achieved.

This makes these signals useful for applications where very high resolutions are required. Further they are very suitable for digital drives with a very slow and precise movement (e.g., for grinding machines or lifts and elevators).

- Shaft turning clockwise, top view of shaft
- 0-pulse is generated once per turn

Output Circuit and Recommended Input Circuit for Sine Wave Voltage Signals:

$R_s = 10 \Omega$
 $C_1 = 150 \text{ pF}$
 $C_2 = 10 \text{ pF}$
 $R_1 = 10 \text{ k}\Omega$
 $R_2 = 33 \text{ k}\Omega$
 $U_0 = 2.5 \text{ V} \pm 0.5 \text{ V}$

$Z = 120 \Omega$
 $U_1 = U_0$

OPV: e.g., MC33074

We reserve the right to make technical alterations without prior notice.

General Information

Rotary Measurement Technology - Incremental Encoders

How Devices Interpret Encoder Signals:

PLC counter cards, discrete counters, and drives require two distinct voltage level states to trigger the input's logic state. The voltage "threshold" levels are defined by each manufacturer and will be included in their operation manuals. The lower voltage level is defined as logic "0" and the higher voltage level is defined as logic "1". The encoders square wave output toggles from logic "0" to logic "1". The PPR (pulses per revolutions) of the encoder defines how many times this will occur per revolution of the encoder, while the encoders output driver determines the voltage threshold levels. The physical communication line between the encoder and these devices will be either single ended or differential. Therefore, it is critical to take care when selecting the encoder's output driver.

Typical Device Voltage Level Triggering Requirements:

	<u>Logic Level "0"</u>	<u>Logic Level "1"</u>
TTL Level	0 V to 0.5 V	2.8 V to 5 V
HTL Level	0 V to 4 V	10 V to 24 V

Cable Lengths for Incremental Encoders:

Depending on the output circuit and the electrical noise, the following cable lengths are recommended.

Output circuit:	Max. cable length:	Encoder connected to:
Push-pull without inverted signals	328 ft (100 m*)	Counter/PLC
Push-pull with inverted signals	820 ft (250 m*)	PLC/IPC ¹⁾
Push-pull with inverted signals (7272)	98 ft (30 m)	
RS422 with inverted signals	Up to 3280 ft (1000 m) (> 164 ft (> 50 m)*)	PLC/IPC ¹⁾
Voltage sine with inverted signals	164 ft (50 m)	PLC/IPC ¹⁾

¹⁾ IPC = industrial PC
* depends on frequency

Annotations:

- Depending on the application the recommended cable length can be shorter, especially in areas with strong electrical noise.
- Always use shielded cables
- The core diameter of the signal cores should be $\geq 0.14 \text{ mm}^2$ (26 AWG)
- The core diameter of the voltage supply cores should be large enough, depending on the cable length, that the voltage supply of the encoder is high enough and the signals do not go below the minimum levels! We strictly recommend the use of the cable types written down in the accessories.

Rotary Measurement Technology - Absolute Encoders

Design and Function:

Absolute encoders have a disk with a digital coding on concentric tracks. This code is read by a Turck Opto-Asic. A unique bit pattern is assigned to each position.

In the event of a power failure, true position verification is available as soon as power is up again, even if the shaft was rotated while the encoder was powered off. Also, no reference drives after starting-up are necessary, as with incremental systems. Thus, safety is increased and the time taken for reference drives is saved.

Absolute

Mechanical Advantages of Turck Encoders:

Sturdy bearing construction: "Bearing-Lock design"

- Interlocked bearings, large bearing span and strong outer bearings ensure stability when subjected to vibration.
- Ideal for outdoor use thanks to its solid die-cast housing and radial shaft seal, as well as IP67 protection rating and a temperature range from -40 to +185 °F (-40 to +85 °C).

Selecting an Absolute Encoder:

When selecting an absolute encoder, the following parameters should be considered in addition to the recommendations on page B1: supply voltage, type of code and interface (SSI, parallel, fieldbus, 4-20 mA)

Versions:

Singleturn encoders: Depending on the number of divisions, they generate up to 131,072 (17 Bit) unique positions per turn. This corresponds to an angular resolution of 0.0028 (= 0.168'). After one revolution the process re-starts.

Singleturn encoders can be used in applications where revolution is sufficient (e.g., measurement of angles, robotics).

Multiturn encoders: Available with up to 131,072 (17 Bit) definite angular positions per revolution in addition to 16,777,216 (24 Bit) definite revolutions. This corresponds to 2.19 trillion (41 Bit) definite positions.

Multiturn encoders can be used for positioning applications (e.g., automatic storage, retired systems, lift elevators, cranes, and machine tools).

Output Codes:

Decimal	Binary	Gray	BCD
0	0000	0000	0000 0000
1	0001	0001	0000 0001
2	0010	0011	0000 0010
3	0011	0010	0000 0011
4	0100	0110	0000 0100
5	0101	0111	0000 0101
6	0110	0101	0000 0110

Decimal	Binary	Gray	BCD
7	0111	0100	0000 0111
8	1000	1100	0000 1000
9	1001	1101	0000 1001
10	1010	1111	0001 0000
11	1011	1110	0001 0001
12	1100	1010	0001 0010

General Information

Rotary Measurement Technology - Absolute Encoders

Code Types

Binary Code:

Binary Code can be processed very simply by computer systems. Gray code inside the encoder is converted via the ASIC to binary code. Binary codes have more than one bit transition for each position change. For this reason, optical systems using binary code may cause occasional transition errors. In most applications this does not present a problem due to the absolute nature of the encoder, and the position is normally corrected.

Gray Code:

The Gray Code is a single-step code. This indicates that only 1 bit is changed from one position to the next. This leads to a high position reliability. The Gray Code is used to optically read out the position for all absolute encoders.

Gray excess: The extraction of a defined part of the Gray Code leads to the gray excess code. This code enables the generation of non-binary based divisions (e.g., 360, 720, 1000, and 1440).

Reversion of the gray code: The code values increase when the shaft is turning clockwise. If the most significant bit (MSB) is inverted, the code values decrease when the shaft is turning clockwise.

BCD Code:

Rotary Measurement Technology - Absolute Encoders

OptoASIC and Intelligent Scan Technology™:

OptoASIC and Intelligent Scan Technology (IST) is the latest development in Absolute encoder technology. The development of an OptoASIC with Intelligent Scan Technology enabled Turck to build the first optical multiturn encoder without gears or magnetic sensors.

Eliminating mechanical parts like gears allowed Turck to make the encoder smaller than others currently on the market. These encoders offer a total resolution of up to 41 bits, a programmable multiturn encoder with up to 16 million revolutions, and a high-precision single turn with up to 17 bits resolution, all in a 39 mm diameter housing that is up to 45 mm long.

The Multiturn Gear Module (12 bit resolution):

Geared multiturn encoders are the types RM-28, RM-29, RM-35, and RM-36.

We reserve the right to make technical alterations without prior notice.

Patented Integrative Technology:

Integrative Technology, developed and patented, is a package of measures that ensures compact construction, high signal quality, high shock resistance (up to 2,500 m/S²), high reliability and a high level of immunity to EMC.

This is achieved using an Opto ASIC: a multilayer board, shock resistant and space-saving method of mounting the sensor unit. The use of a highly optimized ASIC interface ensures the integration of several hundred individual components. Components that had previously been needed to balance the system, such as balancing potentiometers, can be dispensed with.

Advantages of Integrative Technology: Singleturn shaft encoders are available with the same dimensions as their incremental correspondents. This allows an easy mechanical substitution.

General Information

Rotary Measurement Technology - Absolute Encoders

Mechanical or Electronic Gears:

Absolute singleturn and multiturn encoders have established themselves as the standard method for measuring linear displacement or angular position. With absolute encoders, a reference trip is no longer needed after system start-up or a power-down. Multiturn encoders are now being employed where incremental encoders had dominated, such as with geared motors or lifts.

Today, all manner of multiturn encoders are available in a variety of designs. As a rule, the manufacturers offer either mechanical gears for 'counting turns' or electronic counters with electronic data storage. For many years, encoder companies have made both absolute multiturn encoders with gears or without gears, and then criticized each other for the perceived drawbacks to the designs. Turck offers both absolute multiturn encoders without mechanical gears and with mechanical gears. Not having mechanical gears allows Turck to make more compact absolute multiturn encoders. These encoders require batteries, whereas geared multiturn encoders do not have batteries. Battery life is often a discussion point. Based on how the encoder is actually used, the calculated battery life could be as long as 75 years.

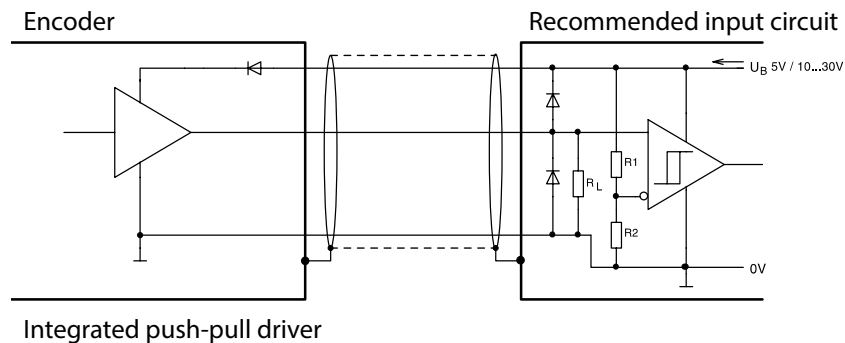

Outputs:

Different interfaces are available to transfer the position data to a controller. Turck offers a variety of outputs detailed in the following sections.

Parallel Output:

This type of transfer is very fast. All bits of a position are transferred simultaneously, each via a separate line.

Output Circuit and Recommended Input Circuit Parallel Interface:

Synchronous Serial Interface (SSI):

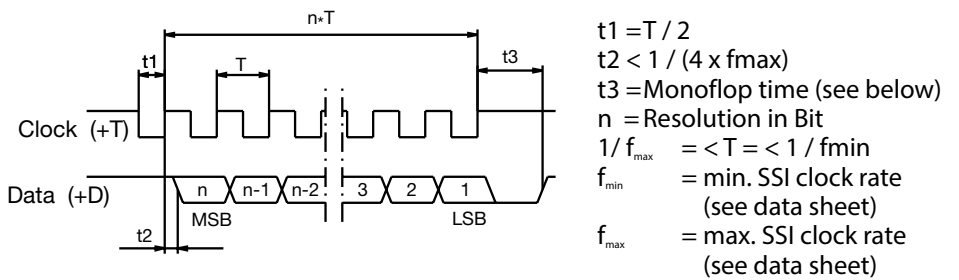

SSI is an industrial standard serial interface between an absolute encoder or sensor and a controller. The SSI protocol uses a clock pulse train from a controller to initiate a gated output from the sensor. Position data is continually updated by the sensor and made available to the shift register. Data is shifted out when the sensor receives a pulse train from the controller. SSI is widely used because of its simplicity and noise immunity.

Rotary Measurement Technology - Absolute Encoders

Output Circuit and Recommended Input Circuit for Multiturn Encoders with SSI Output:

Data Transmission SSI:

At rest, the clock and data lines are at a high level. With the first falling clock-pulse edge, the current encoder data is stored in the buffer ready to be sent. With the next rising clock-pulse edge, the data is transmitted bit by bit, starting with the MSB. The transfer of a complete data word requires n+1 rising clock-pulse edges (n = resolution in Bit). For example, 14 clock signals are needed for a complete readout of a 13 Bit encoder. After the next positive-going clock-pulse edge, the data line will remain at a low level until the encoder is ready for a new data word. The clock line must stay high for a time longer than the mono flop time, and then can begin a new read-out sequence again with the next falling edge.

Please Note:

Only for type series RS-22, RS-30, RM-41, RM-77, RM-78: Updating the data occurs sequentially with the read-out cycle. Therefore, the data is as up-to-date as the interval time between two read-outs. A periodic read-out of the encoder in the application is recommended, using appropriately short cycle times, so that current position values are constantly maintained. It is not possible to read out the same data word several times.

Monoflop time of the encoder: t3 = max. 40µs

Only for Absolute encoders: Updating the data occurs immediately with the first falling edge of the clock signal. The data is always up-to-date. If a repeated read-out of the same data word is desired, then a new clock sequence must be started within the time interval t3. If the clock sequence is terminated before the necessary number of clock pulses needed for a complete readout of the data word has been transmitted, then the data line will go high again and signal that the last read-out sequence has been aborted. It will also indicate that it is ready for a new data word to be sent. Monoflop time of the encoder: t3 = see data sheet.

We reserve the right to make technical alterations without prior notice.

General Information

Rotary Measurement Technology - Absolute Encoders

BiSS Interface:

Open, digital sensor interface (BiSS). The bidirectional digital sensor interface (BiSS) assures the communication between the encoder and the measuring device or drive control and can, if required, simultaneously transfer the measured values of up to eight sensors.

For one to eight subscribers the interface master provides the clock signal for the simultaneous capturing of all position data as well as for the subsequent synchronous serial data transmission. Only four unidirectional RS422 data lines are required; the minimal slave electronics is located directly in the sensor ICs.

When the master sends the clock pulse on the line MA, the slave will reply on the return line SL with the captured position data. Commands or parameters are exchanged via a PWM clock sequence, although this is not necessary for the startup of the BiSS protocol.

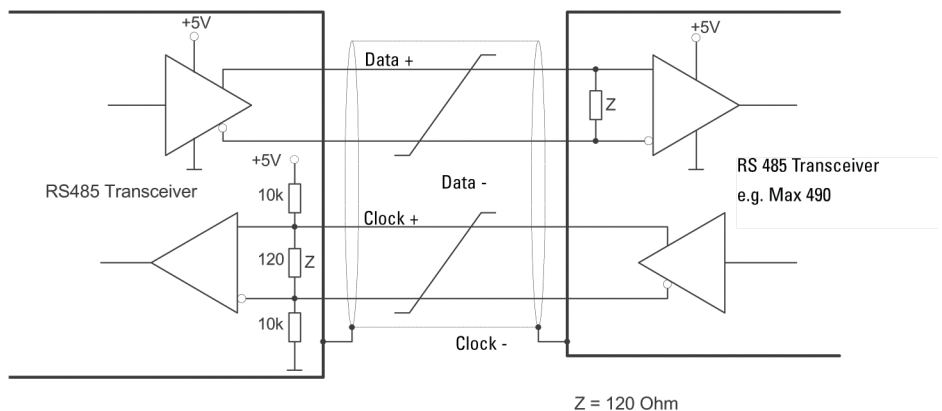

With every data cycle the master learns and compensates for the signal transit times, thus enabling high clock rates up to 10M bit/s even with cable lengths of 100 m. Varying cable conditions, for example due to drag movement, are corrected. The synchronization accuracy between several encoders on a number of axes is less than one microsecond; moreover the master keeps the signal transit times that have been experienced transparent for the controller and thus enables a further optimization.

The BiSS protocol classifies each subscriber into various data areas: sensor data, multi-cycle data and register data. These data areas are laid out differently with respect to the possibility of accessing them and to their transmission performance, which covers a wide variety of sensor applications. A bidirectional communication parameter for configuring the device, and if need be for so-called OEM parameters, is placed in the register data area. Data that change slowly, such as speed of rotation or motor temperature, occupy the multi-cycle data area, whereas data that change quickly occupy the sensor data area.

This means that there is no problem in achieving control cycle times under 10 MHz even for data words up to 64 bit. Enough space is available for redundancy, and as a rule is used for implementing a CRC (cyclic redundancy check). As they are only framed by a start and a stop bit, the sensor data is transferred at the best possible user data rate; a single multi-cycle data bit is optional. Similarly detected and triggered, the multi-cycle data bits form a second inband protocol and contribute to the redundancy of the sensor data. Permanent monitoring of the drive status and operation is possible without interfering with the controller cycle. Specific device developments by individual users are not restricted or made more expensive by a need to be compatible with other BiSS products. A BiSS subscriber is described with only a few parameters, and an XML device description file that comes with the product simplifies the startup of the controller.

Output circuit and recommended input circuit for absolute encoders with a BiSS output

Z = 120 Ohm

Rotary Measurement Technology - Absolute Encoders

Cable Length:

The following maximum cable lengths are recommended, depending on the output circuitry and any noise sources present.

Interface and output circuit:	Max. cable length:	Connected to:
Parallel CMOS/TTL	6.5 ft (2 m)	SPS/IPC ¹⁾
Parallel push-pull	328 ft (100 m)	SPS/IPC ¹⁾
SSI	up to 3,280 ft (1,000 m) ²⁾	SPS/IPC ¹⁾
RS422 /RS485	3,280 ft (1,000 m)	SPS/IPC ¹⁾
Analog 4-20 mA	656 ft (200 m)	

¹⁾ IPC = Industrial PC
²⁾ Depends on clock frequency: at 100 kHz L_{max} approx. 250 m; at f = 250 kHz L_{max} approx. 50 m

- Annotations:**
- Depending on the application the max. allowed cable length can be shorter, especially in areas with strong electrical noise.
 - Always use shielded cables
 - The core diameter of the signal cores should be ≥ 0.14 mm²
 - The core diameter of the voltage supply cores should be large enough depending on the cable length, that the voltage supply of the encoder is high enough and the signals do not go below the minimum levels! We strictly recommend the use of the cable types written down in the accessories.

**Magnetic Measuring System
Up to 50 m Measuring Length
Up to 0.005 mm Resolution:**

A magnetic sensor is guided across a magnetic band without coming into contact with it. The changes in polarity on the magnetic band are counted and intermediate values are interpolated. Our engineers have fine-tuned the system to such a degree that resolutions up to 0.005 mm are possible.

The system is not affected by dust, shavings or humidity and is resistant to many liquids and to oil. Assembly is easy; the magnetic band just has to be glued into place. There are no problems for calibration. The distance between the sensor and the magnetic band can be up to two mm. Repeat accuracy is very high.

Where is Our Linear Measurement System Used?

The measuring system offers an economical alternative to optical systems in applications where the high accuracy of the glass rules is not absolutely necessary, but where up until now no other suitable alternative has been available.

Because of its rugged construction, the measuring system can now be used even in tough industrial environments.

The system is not affected by vibration, nor is it damaged if subjected to high shock loads. Our flexible magnetic band can fit around very large shafts. The maximum length of the magnetic band is 50 m.

We reserve the right to make technical alterations without prior notice.

General Information

Linear Measurement Technology

Draw Wire Systems:

At the core of a draw wire encoder is a drum mounted on bearings, onto which a wire is wound. The winding takes place via a spring-loaded device. The number of revolutions is measured by means of an encoder. If the circumference of the drum is known, then the length can be calculated from it.

Thus, draw wire systems convert linear motion into rotary motion. This is then measured with encoders. Our spectrum ranges from miniature draw wire versions to models capable of measuring 40 m.

- Specially for demanding applications
- With analog sensors (0-10 V, 4-20 mA, potentiometer) or encoders (incremental, absolute, fieldbus)
- Measuring lengths from 250 mm up to 40,000 mm
- High travelling speed
- High acceleration
- Simple wire fixing using clip
- Quick mounting
- Diamond-polished ceramic guide
- Titanium anodized aluminum housing
- Dynamic spring traction by means of a constant force spring, long service life, approx. 2 million complete cycles.

We reserve the right to make technical alterations without prior notice.

Length Measuring Kits:

*unlimited length resolution up to 0.1 mm

Turck provides the measuring wheel, encoder and counter from one source, all in one complete kit. This kit saves you time and effort, as there is no need to assemble the component parts.

General Information

Ingress Protection Classes- IEC 60529

First ID Number	Protection from penetration of...	Requirements
0	Unprotected	N/A
1	Solid Foreign Particles Ø50 mm	No full penetration of sphere with Ø50 mm
2	Solid Foreign Particles Ø12.5 mm	No full penetration of sphere with Ø12.5 mm
3	Solid Foreign Particles Ø2.5 mm	No penetration of rod with Ø2.5 mm
4	Solid Foreign Particles Ø1.0 mm	No penetration of wire with Ø1.0 mm
5	Dust	Dust may only penetrate in such quantity that function and safety are not impacted
6	Dust	No penetration of dust

Second ID Number	Protection from penetration of...	Requirements
0	Unprotected	N/A
1	Dripping water	Vertically falling drips may not cause any damage
2	Dripping water when the enclosure is in a slanted position of up to 15°	Vertically falling drips may not cause any damage
3	Spraying water	Spraying water, which is sprayed in a perpendicular angle of up to 60° may not cause any damage
4	Splashing water	Water splashing against the enclosure from every direction may not cause any damage
4K	Splashing water with increased pressure	Water splashing against the enclosure from every direction and with increased pressure may not cause any damage
5	Jet water	Water which is hosed against the enclosure from every direction may not cause damage
6	Intense jet water	Water which is hosed against the enclosure with high intensity may not cause any damage
6K	Intense jet water with increased pressure	Water which is hosed against the enclosure with high intensity and increased pressure may not cause any damage
7	Temporary immersion in water	Water may not enter the enclosure in such quantity as to cause damage when the enclosure is held under water for a set period of time using predetermined pressure (1 m for 30 min)
8	Continuous immersion in water	Water may not enter the enclosure in such quantity as to cause damage when the enclosure is held under water for a set period of time using predetermined pressure (Turck standard is 6' of water, and other chemicals, for a period of 24 hours)
9K	Water at high-pressure/steam jet cleaning	Water which is directed against the enclosure from every direction with extremely high pressure may not cause any damage (14 to 16 l/min at 8,000 to 10,000 kPa)

We reserve the right to make technical alterations without prior notice.

Warranty Terms and Conditions

RISK OF LOSS

Delivery of the equipment to a common carrier shall constitute delivery to the Purchaser and the risk of loss shall transfer at that time to Purchaser. Should delivery be delayed due to an act or omission on the part of the Purchaser, risk of loss shall transfer to the Purchaser upon notification by Turck Inc. that the order is complete and ready for shipment.

WARRANTIES

Turck Inc. (hereinafter "Turck") offers five (5) WARRANTIES to cover all products sold. They are as follows:

- 1) The **12-MONTH WARRANTY** is available for the products listed - generally those not covered by **LIFETIME, 5-YEAR, 24-MONTH or 18-MONTH** warranty. No registration required.
- 2) The **18-MONTH WARRANTY** is available for the products listed - generally those not covered by **LIFETIME or 5-YEAR WARRANTY**. No registration is required.
- 3) The **24-MONTH WARRANTY** is available for the products listed - generally those not covered by **LIFETIME, 5-YEAR or 18-MONTH**. No registration is required.
- 4) The **5-YEAR WARRANTY** is available generally for the products listed. No registration is required.
- 5) A **LIFETIME WARRANTY** is available for the products listed. It becomes effective when the accompanying **Turck LIFETIME WARRANTY REGISTRATION** is completed and returned to Turck.

GENERAL TERMS AND CONDITIONS FOR ALL WARRANTIES

- **12-MONTH STANDARD WARRANTY**
- **18-MONTH STANDARD WARRANTY**
- **24-MONTH STANDARD WARRANTY**
- **5-YEAR WARRANTY**
- **LIFETIME WARRANTY**

Turck warrants the Products covered by the respective WARRANTY AGREEMENTS to be free from defects in material and workmanship under normal and proper usage for the respective time periods listed above from the date of shipment from Turck. In addition, certain specific terms apply to the various WARRANTIES.

THESE EXPRESS WARRANTIES ARE IN LIEU OF AND EXCLUDE ALL OTHER REPRESENTATIONS MADE - BOTH EXPRESSED AND IMPLIED. THERE ARE NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE FOR PRODUCTS COVERED BY THESE TERMS AND CONDITIONS.

Turck warrants that the goods sold are as described, but no promise, description, affirmation of fact, sample model or representation, oral or written shall be part of an order, unless set forth in these terms and conditions, or are in writing and signed by an authorized representative of Turck. These WARRANTIES do not apply to any Product which has been subject to misuse, negligence, or accident - or to any Product which has been modified or repaired, improperly installed, altered, or disassembled - except according to Turck's written instructions.

These WARRANTIES are subject to the following conditions:

- 1) These WARRANTIES are limited to the electronic and mechanical performance only, as expressly detailed in the Product specifications and NOT to cosmetic performance.
- 2) These WARRANTIES shall not apply to any cables attached to, or integrated with the Product. However, the **18-MONTH WARRANTY** shall apply to cables sold separately by Turck.
- 3) These WARRANTIES shall not apply to any Products which are stored, or utilized, in harsh environmental or electrical conditions outside Turck's written specifications.
- 4) The WARRANTIES are applicable only to Products shipped from Turck subsequent to January 1, 1988.

ADDITIONAL SPECIFIC TERMS FOR:

(12-MONTH STANDARD WARRANTY) FOR LINEAR DISPLACEMENT TRANSDUCERS, EZ TRACK, RFID PRODUCTS, DRAW WIRE ASSEMBLIES AND SLIP RINGS.

(18-MONTH STANDARD WARRANTY) FOR Q-TRACK INDUCTIVE SENSORS, ULTRASONIC SENSORS, FLOW SENSORS, PRESSURE SENSORS, TEMPERATURE SENSORS, INCLINOMETERS, CABLES AND ALL NON-SENSING PRODUCTS SOLD BY TURCK INC. INCLUDING MULTI-SAFE, MULTI-MODUL, MULTI-CART AND RELATED AMPLIFIER PRODUCTS, RELAYS AND TIMERS.

(24-MONTH STANDARD WARRANTY) FOR ENCODERS EXCLUDING DRAW WIRE ASSEMBLIES.

5-YEAR WARRANTY FOR INDUCTIVE AND CAPACITIVE PROXIMITY SENSORS: THE PERIODS COVERED FOR THE ABOVE WARRANTIES AND PRODUCTS SHALL BE 12 MONTHS, 18-MONTHS, 24-MONTHS AND 5-YEARS, RESPECTIVELY, FROM THE DATE OF SHIPMENT FROM TURCK.

LIFETIME WARRANTY (OPTIONAL - REGISTRATION REQUIRED) FOR INDUCTIVE, INDUCTIVE MAGNET OPERATED AND CAPACITIVE PROXIMITY SENSORS SOLD TO THE ORIGINAL PURCHASER FOR THE LIFETIME OF THE ORIGINAL APPLICATION.

Linear and Rotary Position

Warranty Terms and Conditions

THE FOLLOWING TERMS APPLY TO THE LIFETIME WARRANTY IN ADDITION TO THE GENERAL TERMS:

- 1) This WARRANTY shall be effective only when the LIFETIME WARRANTY REGISTRATION has been completed, signed by the End User and an authorized Turck Representative or Distributor and has been received by Turck no later than six (6) months after installation in the End User's Plant, or two (2) years from the date product was shipped from Turck, whichever is sooner.
- 2) This warranty is available only to Turck's authorized Representatives, Distributors and to the Original User. (The term "Original User" means that person, firm, or corporation which first uses the Product on a continuous basis in connection with the operation of a production line, piece of machinery, equipment, or similar device.) In the event the ownership of the product is transferred to a person, firm or corporation other than the Original User, this WARRANTY shall terminate.
- 3) This WARRANTY is applicable only to the Original Application. In the event the machinery, equipment, or production line to which the Product is connected, or on which it is installed, is substituted, changed, moved or replaced, the WARRANTY shall terminate.
- 4) This WARRANTY shall be valid only if the Product was purchased by the Original User from Turck, or from an authorized Turck Distributor, or was an integral part of a piece of machinery and equipment obtained by the Original user from an Original Equipment Manufacturer, which itself, was purchased directly from Turck or from an authorized Distributor.

PURCHASER'S REMEDIES

This Remedy shall apply to all WARRANTIES. If a Turck Distributor desires to make a WARRANTY Claim, the Distributor shall, if requested by Turck, ship the Product to Turck's factory in Minneapolis, Minnesota, postage or freight prepaid. If the User desires to make a WARRANTY Claim, they shall notify the authorized Turck Distributor from whom it was purchased or, if such Distributor is unknown, shall notify Turck. Turck shall, at its option, take any of the following two courses of action for any products which Turck determines are defective in materials or workmanship.

- 1) Repair or replace the Product and ship the Product to the Original Purchaser or to the authorized Turck Distributor, postage or freight prepaid; or
- 2) Repay to the Original Purchaser that price paid by the Original Purchaser; provided that if the claim is made under the LIFETIME WARRANTY, and such Product is not then being manufactured by Turck, then the amount to be repaid by Turck to the Original Purchaser shall be reduced according to the following schedule:

Number of Years Since Date of Purchase by Original Purchaser	Percent of Original Purchase Price To Be Paid by Turck
10	50%
15	25%
20	10%
More than 20	5%

PURCHASER'S REMEDIES SHALL BE LIMITED EXCLUSIVELY TO THE RIGHT OF REPLACEMENT, REPAIR OR REPAYMENT AS PROVIDED AND DOES NOT INCLUDE ANY LABOR COST OR REPLACEMENT AT ORIGINAL PURCHASER'S SITE. TURCK SHALL NOT BE LIABLE FOR ANY CONSEQUENTIAL DAMAGES RESULTING FROM ANY BREACH OF ANY WARRANTY, EXPRESSED OR IMPLIED, APPLICABLE TO THE PRODUCT, INCLUDING WITHOUT LIMITATION, ANY DAMAGES RESULTING FROM PROPERTY DAMAGE, PERSONAL INJURY OR BUSINESS INTERRUPTION.

CONSIDER SAFETY AND PROTECTION PRECAUTIONS

Turck takes great care to design and build reliable and dependable products, however, some products can fail eventually. You must take precautions to design your equipment to prevent property damage and personal injury in the unlikely event of failure. As a matter of policy, Turck does NOT recommend the installation of electronic controls as the sole device FOR THE PROTECTION OF PERSONNEL in connection with power driven presses, brakes, shears and similar equipment and, therefore, the customer should build in redundancy or dual control using approved safety devices for these applications.

GOVERNING LAW

The sale and purchase of Products covered hereby and all terms and conditions hereof shall be governed by the law of the States of Minnesota.

We reserve the right to make technical alterations without prior notice.

Notes:

We reserve the right to make technical alterations without prior notice.
